OUTSIDE 99'ER

This Issue's Cover

Our talented staff artist, Laredo, has transported a familiar Christmas scene into the computer age. No wonder Santa Claus is using a Home Computer to run his ever-expanding workshop—he just had to have one of his own after seeing it on so many of the lists he receives from good little boys and girls (of all ages). Santa well knows that good tools make life easier. Already his Home Computer has bailed him out more often than all the elves and reindeer—even Rudolph—combined. In fact, his latest software tools have streamlined the Christmas delivery operation so well, that perhaps more people will start believing Santa really does all that work in just one night.

INSIDE 99'ER

Adaptation to sophisticated tools distinguishes humans from other life forms on the good ol' Earth. The creation of tools by the few for use by the many continually expands the horizons of our society. The advent of the TI Home Computer and its ensuing proliferation have set the stage for a new class of powerful tools for common use—computer programs.

Once confined to scientific laboratories and huge corporate centers, utilitarian computer programs are now finding a place in many homes. Whether for word processing or home finances, these software tools are proving themselves invaluable.

TI-Fest: The Home Computer Show was the springboard for some new programs in this category. To see what else happened at this historic event, browse through our four-page photo tour of the show. By the way, we have an additional photo spread for you—one that illustrates with holiday spirit just how Texas Instruments produces the Home Computer. So be sure to also check our timely *Santa's Workshop*.

With photographic visions now dancing in your head, let's turn to the text—a text editor, that is. *Tex-Scribe: A Text Editor for the Home Computer* offers you a powerful writing tool. Once you have tried a text editor, you may decide to write a book or at least an epic poem.

You say that you need an idea for a poem? For a seasonal sample, read *A Christmas Computer Carol*. Even Santa got a chuckle out of it! Speaking of Christmas verses, did you get your greeting cards mailed out without trouble? Next year, you may find a mailing list program to be a useful tool for this purpose. We've

reviewed one for you in *Managing A Mailing List the Futura Way*.

Wouldn't it be fun to design your own customized Christmas cards using the graphics of the Home Computer? *Plotting with the Home Computer* gives you dot-plot capability from TI BASIC using the TI Mini-Memory cartridge! And if your program for graphics design gets too complex, you might just wind up exclaiming, *Oh No! Memory Full!* For some practical tips on what to do in this case, read Regena's "memorable" article.

After working hard all day using your new tools, it is time to unwind with some Computer Gaming. The younger family members will enjoy piloting their own TI BASIC *Termite* through his wooden log. But watch out for knotholes!

To extend your basic gaming enjoyment, be sure to stake your claim in the 99'er *Gold Rush*—an Extended BASIC graphic arcade-adventure game for the whole family. Catch the fever, but keep your powder dry.

The biggest hit in Computer Gaming Land at TI-Fest was the new *Parsec* video arcade game from TI. It has everything including a talking, onboard-computer! Read the review of this exciting game—it's going to blast you right out of your space boots!

Playing all these computer games may cause you to attempt programming one yourself. If LOGO is your language choice for this project, *The Turtle Arcade: Movies & Video Games in LOGO* will be right up your alley.

All the elves and other lively spirits here at 99'er Magazine would now like to wish you a joyous and prosperous Holiday Season. And may all your programs RUN bug-free.

GOING TO THE MIDDLE OF THE ROAD
GOING TO THE MIDDLE OF THE ROAD
GOING TO THE MIDDLE OF THE ROAD

Program as listed will completely fill available memory of TI-99/4A and cannot be RUN with disk controller (and possible RS232 interface) turned on. It must be SAVED and RUN from cassette. It may also possibly be SAVED and RUN from disk in Extended BASIC with the 32K memory peripheral if the last 2 character sets were not used.

ON SCREEN

"What's a nice little computer magazine like you doing in a place like this?"

How business—you'd think it would be the farthest thing from the regimented life of publishing a monthly computer magazine, right? Well, I used to think so—that is, until this very same magazine put on the greasepaint, encouraged the crowd to roar, and produced the very first Home Computer Show.

The October, San Francisco event is now history. In this issue, we've reproduced a collection of photographs taken during the show that (we hope) conveys the exciting mood of the occasion. My staff and I were thrilled to have had the opportunity to meet many of our readers worldwide who attended the event, and now are eager to share the experience of 99'er TI-Fest with the rest of you.

The idea behind TI-Fest was to produce a computer-awareness show directed at and structured for a diverse group of people with little or no computer experience. The scores of computer shows that have preceded TI-Fest have either been geared to hobbyists, businessmen, or members of the computer industry itself. And like the TI Home Computer that spawned it, a show of this type had been regarded as a concept a little too early for its time . . .

Well, the pundits were proved wrong again. Judging from the crowds that turned out, and the enthusiastic comments of happy showgoers and exhibitors alike, the event was a huge success. It seems to indeed be possible to produce a large computer show that all family members can enjoy and learn from—a show geared to the type of people who are now turning out by the hundreds of thousands to buy inexpensive, versatile computers for entertainment, education, home management, computer literacy, as well as small business and professional use.

We at 99'er Magazine are extremely proud to have played a part in the creation of an institution that promises to proliferate across the country and usher in a new age of computer awareness and use. We're also very proud to have had the support and the opportunity to work with a company like

Texas Instruments who had the faith to stand by us and make the event happen.

As publisher of this magazine and producer of the show, there are many people I personally am indebted to. First, there are the members of my hard-working staff who pushed themselves beyond what we previously thought were the limits of human endurance in preparing for, transporting, setting up, running, and tearing down the show. And all this while I saddled them with the burden of conversion to a monthly publication schedule!

Then there were the individual Tiers themselves: first the management people like Bill Turner, Gary Rado, and Don Bynum who committed the necessary TI resources that made the show possible. Special thanks are due to Don Bynum, manager of the Personal Computer Division, for taking the time out of his busy schedule to fly out to the show and engage Home Computer users in a lively Q & A forum. We'll have excerpts of the session in a forthcoming issue.

Of course, Don wasn't the only one who made the trip out from Lubbock and Dallas—many technical support personnel from Consumer Products Group and Corporate Engineering Center helped us hook up equipment, present seminars, and answer technical questions. The tutorial seminars presented by Tiers on computer languages, word processing, and interactive video were especially well received; for that I have people like Jim Dugan, John Acker, Alan Acree, John Di Angelo, and Leon Tietz to thank.

Then there are all the other non-Tier seminar speakers to thank—familiar 99'er authors, advertisers, and others who presented a wealth of stimulating, informative material. Much of this material has already suggested ideas for new articles and features for publication in forthcoming issues of this magazine. I'm especially grateful to Hank Gorman, Roger Kirchner, George Gerhold, Charles Ehninger, Norma Clulow, Sam Jenkins and John Barnett for traveling the collective

By Gary M. Kaplan
Publisher & Editor-in-Chief

thousands of miles to attend the show and prepare their excellent seminars and workshop materials.

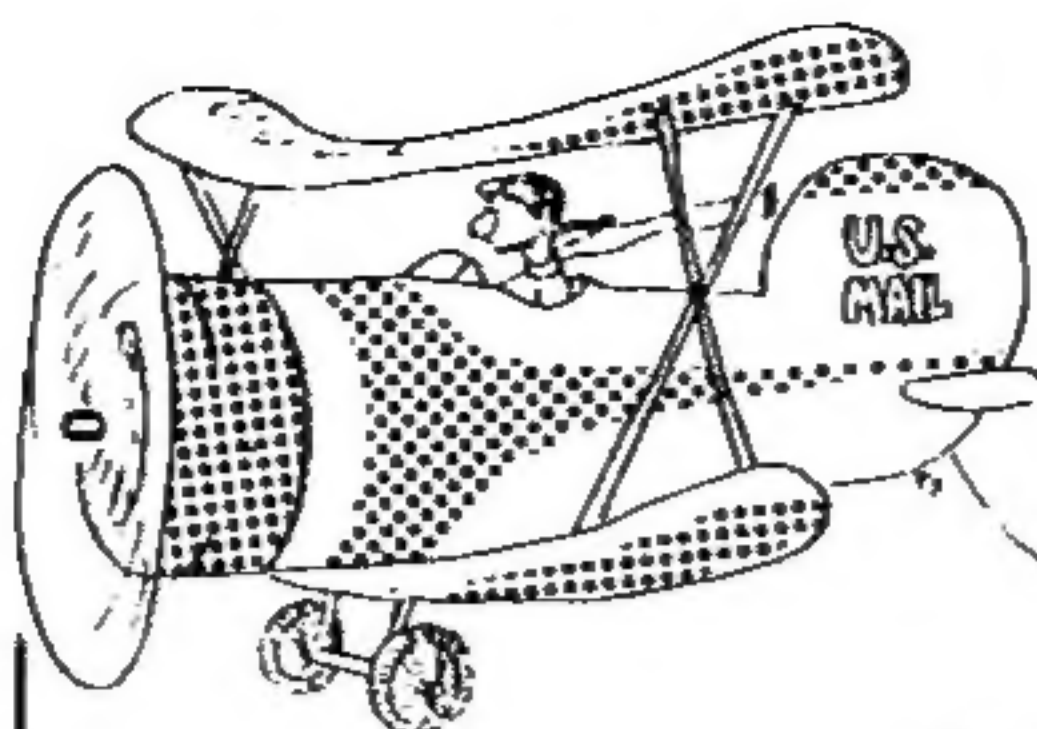

Liaison and behind-the-scenes contracting contributed a vital measure of support to this show's successful production. Bill Hardin of Hardin's Computer Solutions worked with us very closely to ensure that our custom design for the large exhibit islands were correctly manufactured by his firm according to our critical specifications, and were then packed and shipped to us in Oregon in time for last-minute wiring and customizing.

The all-important TI liaison work was handled by Pat Bentley. I'm extremely grateful to Pat for his assistance prior to, during, and after TI-Fest. The logistics involving TI's participation were staggering, and Pat handled it all without a hitch. Special liaison thanks are also extended to John Yantis, who assisted in rounding up seminar speakers, and Jon Campbell of TI Press Relations who assisted me at the show in escorting several TV crews and members of the local press.

I was fortunate to also have local Bay Area support from people like Mary Fesler of the San Francisco TI Learning Center, and Steve Funk of the Personal Computer Association. Special thanks also go out to Bobbie Doyle, sales manager of the San Francisco—our headquarters hotel, and to Jade Arthur and crew of Greyhound Exposition Services—our patient show decorator.

Now that 99'er TI-Fest is over, and we're back to our daily regimen, I can safely say that I'm looking forward to the next show. Having learned quite a lot from the experience, I now even know how to reply when asked a leading question like, "What's a nice magazine like you doing in a place like this?" I simply whip out my cane and derby hat, do a little dance number, and answer, "That's Show Biz . . ."

For the many hundreds of you readers who have telephoned about the availability of the TI-Fest seminar tapes and transcripts, I ask that you remain patient a little longer. We are presently undergoing the monumental task of transcribing the over 50 hours of tapes. Watch for availability in a forthcoming issue.

LETTERS TO THE EDITOR

Dear Sir:

As an avid reader of your magazine from its onset I have truly enjoyed every issue. I have always enjoyed reading other programmers' program listings to see if I can find shorter, easier or quicker methods of program execution. It never ceases to amaze me that there are so many different ways to program a routine and end up with more or less the same results. I have at times found it difficult to decipher small routines out of the large program listings, with all the GOTOs, GOSUBs and variable value changes.

Based on this, I thought it might be a nice addition to your magazine to have a noncompensatory reader-contributed section on short routines, maybe 25 program statements or less, open to all the languages for the TI Home Computer. I realize that not everyone enjoys programming or typing in lengthy programs but if these routines are kept short in length I feel we could all learn a lot more about the power of our computers.

Here is an Extended BASIC example that sets up a ricocheting sprite in an enclosed area:

```
100 CALL CLEAR :: CALL COLOR(2,6,6) :: PRINT RPT$( "+", 252 ); RPT$( "+", 252 ); RPT$( "+", 56 ) :: R=40 :: C=30 :: CALL SPRITE( #1, 42, 2, 25, 17, R, C )
110 FOR K=1 TO 900 :: CALL POSITION( #1, Y, X ) :: R=R+80*( (Y+R>200)-(Y+R<-1) ) :: C=C+60*( (X+C>250)-(X+C<-1) ) :: CALL MOTION( #1, R, C ) :: NEXT K
```

Craig Miller
San Dimas, CA

Thanks for the sample program, Craig. It does indeed show how much power can be packed into a small amount of programming! We are happy to put such examples in this column. We also welcome articles which contain short program examples.

Dear Sir:

Thank you for publishing such a great magazine. If there is one thing I enjoy more than programming, it's receiving an issue of 99'er Magazine in the mail. It doesn't take me long to read the entire magazine, but I still end up reading it over and over.

Gregory M. Kean
Princeton, NJ

Well, Gregory, now that 99'er is monthly, you should get double the enjoyment!

Dear Sir:

I am a new subscriber and have just recently received all six of your first issues. I am very pleased with them all and I only wish I could have heard of you sooner. It's a real pleasure to read a magazine that not only recognizes that the 99/4A is a computer, but also devotes so much time and space to it.

Ralph Wynn
Virginia Beach, VA

Ralph, I think you were one of the last to receive all the back issues, because the first ones are now out-of-print! Take good care of those copies, their value is going up daily . . .

Dear Sir:

I am a subscriber to your magazine and I think it is the greatest. When we first bought the TI-99/4A, I was disappointed with it in some ways and had been brain washed into thinking that the Apple was the computer everyone wanted and the others were just "toys." Thanks to "99'er" I have overcome this want for an Apple and am really glad we got a TI-99/4A after all.

Also, thank you very, very much for the John Clulow article "Magic Crayon: Learning Assembly Language the Hard Way." It is by far the very best article I have ever read in all the "99'ers." I have all of them and treasure each one. I had all sorts of fears of assembly language until I read that article.

Jim O'Flaherty, Jr.
Denton, TX

Fear of Assembly Language indeed seems widespread. John will be pleased to learn his article was so well received.

Continued on p. 21

Entering 99'er Programs

New readers should be aware that within the magazine's pages are found actual computer programs that you can put into your Home Computer and enjoy.

Make sure you have any special system components required by the program (i.e., the Speech Synthesizer, Extended BASIC cartridge, etc.). Then, using the console keyboard, you can type the printed magazine listing (character for character, and line by line) into the computer's memory.

Before entering the program, connect a cassette recorder to the computer. Make sure you have two blank cassette tapes. For each 10-20 lines you type in, use SAVE CS1 to save that program segment onto one of the tapes. Alternate between the two tapes each time you save the program. Be sure to rewind to the beginning of each tape before saving, so that you always record over and replace the shorter segment of program lines with the longer segment. By following this procedure, you'll always retain most of your work even if the lights go out or someone turns off the computer.

Double check your typing against the program listing for errors, and then have someone else check it. The most common errors are typing the letter "O" instead of the number "0" (zero)—they are not interchangeable to the computer. This is also true for the letters "I" and "L" and number "1" (one). (See "Key-In Reference" on p. 41)

Every time you make a correction to your program, SAVE CS1 and switch the tapes. Once all the errors are corrected, you will have a good copy of the program on the last tape. Before turning off the computer, put the other cassette tape in your recorder and once again SAVE CS1. Now, if one tape gets damaged, you won't have to enter the program listing via the keyboard all over again. Have fun and happy computing.

"TI's Home Computer. This is the one."

A lot of computers offer a lot. Only one in its price range offers the most. The TI Home Computer.

Better to begin with. Anyone can start right away with our Solid State Software™ Command Cartridges. Dozens of programs are available in home management, education and entertainment.

Easy to expand. Our Peripheral Expansion System gives you plug-in cards for memory expansion, P-Code capabilities, a disk drive controller and the RS232 Interface. You can also add a modem, speech

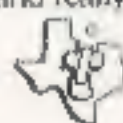

synthesizer, disk drive and 80 column dot matrix printer.

Programming flexibility. TI BASIC is built into the Home Computer. But it can also handle TI Extended BASIC, UCSD Pascal® Version IV.0, TI LOGO II, TMS 9900 Assembly Language and TI PILOT. Programs can be stored in the optional Mini Memory Command Cartridge.

High-Tech specs. 16-bit microprocessor, 16K bytes RAM (expandable to 52K), 26K bytes internal ROM, up to 30K bytes external ROM, 3 simultaneous tones from

110 HZ to 40,000 HZ. High resolution video, U. & Lc. Single line overlay for 2nd function. Control & function keys. 16 color graphics with 4 modes & sprites.

Sound impressive? Compare a TI Home Computer with the competition and really be impressed. You won't even need a computer to tell you this is the one.

Finding the best deal in a computer isn't the whole story. You also need a resource to help you get the most value out of it. That's where the *99'er Magazine* fits in . . .

As the *ONLY* magazine exclusively for the Texas Instruments personal computers—the TI-99/4A family—99'er Magazine is a *MUST* for all current users interested in entertainment, education, business, professional, and home applications. Also, it is a valuable information resource for those who want to know more about these friendly, value-packed personal computers in order to make an intelligent purchase decision in the future . . .

A 4-in-1 Resource

As a special bonus, 99'er Magazine includes the bound-in publications—*LOGO Times: The Magazine of the LOGO Language*; *Computer Gaming*, a treasure-trove of fun and excitement; and *Portable Computing*, covering both hardware and software aspects of portability.

A Multi-Level Teacher and News Medium With Lots of FREE Software

Each BIG issue of 99'er Magazine contains tutorials for beginners, applications tips and advanced programming techniques that keep the pros coming back for more, as well as nearly *one dozen (!)* ready-to-run computer programs for *EVERYONE*. Additionally, there's in-depth descriptions and reviews of the latest hardware, software, and books—timely information to keep its readers well informed and help them buy products wisely.

1980, 230 pages, 6 x 9

**BASIC COMPUTER PROGRAMS
FOR BUSINESS : VOL. 1**

By Charles D. Sternberg.
Each program is documented with a description of its functions and operation, a listing in BASIC, a symbol table, sample data, and one or more samples.

Volume 1 contains over 35 programs covering: budgets, depreciation, cash flow, property comparisons, accounts payable, order entry, warehouse locations, inventory turn-over analysis, job routing, resource allocation, production scheduling, etc.

volume 1, paper, \$12.95
1980, 384 pages, 7 x 10

**BEGINNER'S GUIDE FOR THE
UCSD PASCAL SYSTEM**

By Kenneth Bowles
This highly informative book is written by the originator of the UCSD Pascal System. It is designed as an orientation guide for learning to use the UCSD Pascal System, and features tutorial examples of programming tasks in the form of self-study quiz programs. Once familiar with the system you will find the guide an invaluable reference tool for creating advanced applications.

paper, \$12.95
1980, 204 pages, 6 x 9

**BASIC COMPUTER PROGRAMS
FOR THE HOME**

By Charles D. Sternberg.
An invaluable book containing over 75 practical home application programs that will be helpful to the novice or experienced owner in increasing the usefulness of any home computer. Each program is documented with a description of its functions and operation, a listing in BASIC, a symbol table, sample data, and one or more samples.

1979, 336 pages, 7 x 10

GAME PLAYING WITH BASIC

By Donald D. Spencer.
Enjoy the challenge of competition with your computer. Amuse yourself with such games and puzzles as 3-D Tic-tac-toe, Nim, Roulette, Magic Squares, the 15 Puzzle, Baccarat, Knight's Magic Tour, and many others. The writing is nontechnical, allowing almost anyone to understand computerized game playing.

paper, \$11.50
1977, 176 pages, 6 x 9, illus.

**BASIC COMPUTER PROGRAMS
IN SCIENCE AND ENGINEERING**

By Jules H. Gilder.
Save time and money with this collection of 114 ready-to-run BASIC programs for the hobbyist and engineer. There are programs to do such statistical operations as means, standard deviation averages, curve-fitting, and interpolation. There are programs that design antennas, filters, attenuators, matching networks, plotting, and histogram programs.

paper, \$11.95
1980, 160 pages, 6 x 9, illus.

PRACTICAL BASIC PROGRAMS

Edited by Lon Poole
Here is a new collection of 40 programs you can easily key in and use on most microcomputers. Each program does something useful. *Practical BASIC Programs* is especially useful in small business applications. It solves problems in finance, management decision, mathematics and statistics. It requires no prior programming knowledge. Each program is thoroughly documented. The book contains sample runs, practical problems, BASIC source listings, and an easy to follow narrative to help you realize the potential uses of each program.

paper, \$16.50
1980, 200 pages, 8 1/2 x 11

INTRODUCTION TO TI BASIC

By D. Inman, R. Zamora, and R. Albrecht.

This comprehensive work will teach you all about computers and BASIC for use with the Texas Instruments Home Computer. Even if you've never worked with a computer, you can now teach yourself how to use, program and enjoy the TI Home Computer with this entertaining, and easy-to-read work. The authors have carefully constructed this introduction so that you will soon be writing BASIC programs and exploiting all of the excellent features of the TI machines. Its 14 chapters and Appendices cover all of the essential programming statements and machine features.

paper, \$12.95
1980, 384 pages, 7 x 10

**INTRODUCTION TO PASCAL
(INCLUDING UCSD PASCAL)**

By Rodney Zaks
This is the first book on Pascal that can be used by persons who have never programmed before, but more generally it is a simple and comprehensive introduction to standard and UCSD Pascal for anyone—beginner to experienced programmer—who wants to learn the language rapidly. The logical progression and graduated exercises—designed to provide practice as well as test skill and comprehension—enable the reader to begin writing simple programs almost immediately.

paper, \$16.95
1981, 440 pages, 7 x 9

**BEAT THE ODDS: MICRO-
COMPUTER SIMULATIONS OF
CASINO GAMES**

By Hans Sagan.
Here's an extremely useful programming guide that provides realistic simulations of five popular Casino games: Trente-et-Quarante (Thirty and Forty), Roulette, Chemin-de-Fer, Craps, and Blackjack. Each of the five chapters has the same structure. It begins with a computer run, displaying facets of the programs, followed by an explanation of the objectives and the physical execution of the game. Acceptable bets and how to place them are discussed and systems and/or strategies laid out. Finally, the computer program is developed and various modifications of the program are detailed.

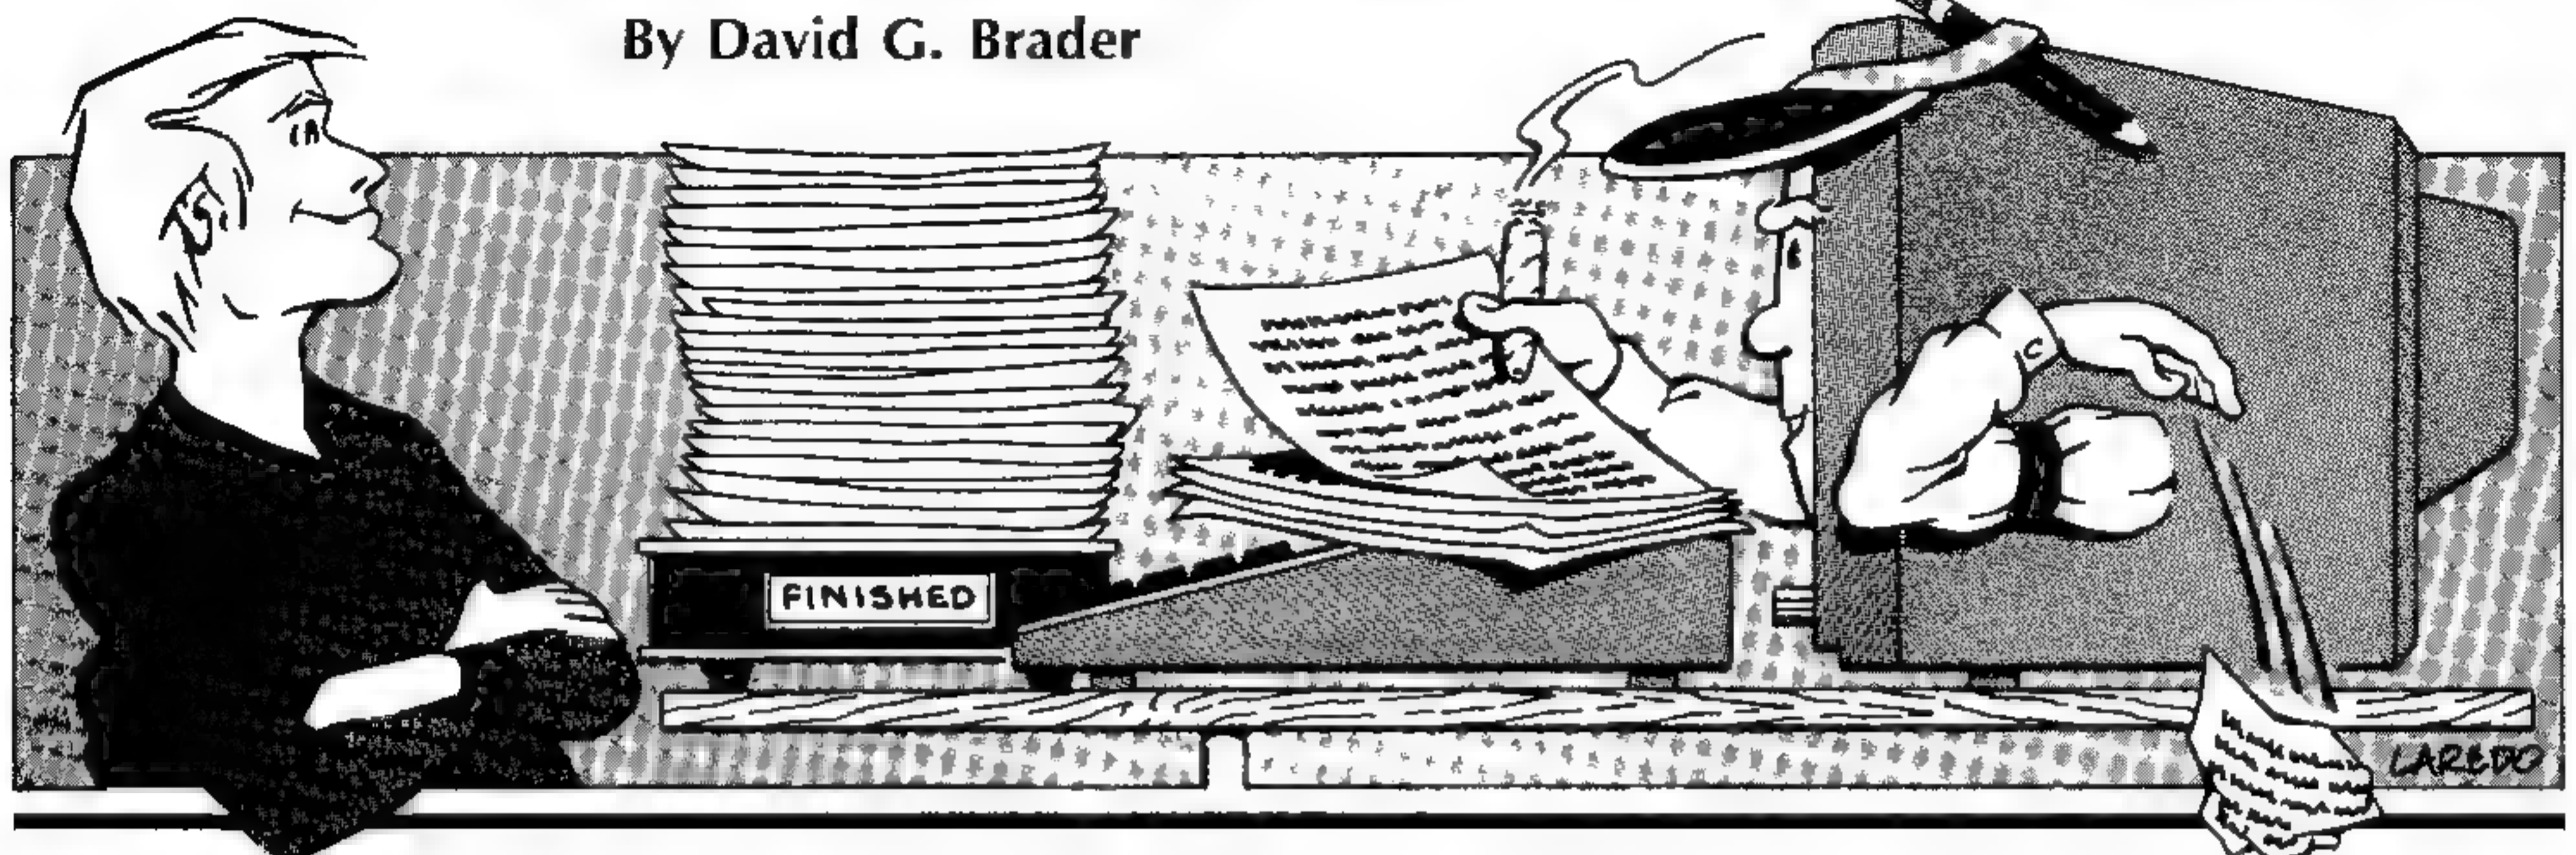

paper, \$9.95
1980, 128 pages, 6 x 9

Tex-Scribe:

A Text Editor for the Home Computer

By David G. Brader

You may picture a Text Editor as a cigar-smoking man in a green eyeshade working at a paper-littered desk in some big-city newspaper office. But the type of text editor covered in this article is *not* human. . . It is a computer program that works on the TI Home Computer—a *tool* for speeding the creation and modification of text information. If John Milton had been able to utilize such a text editor, he just might have finished *Paradise Lost* before going blind!

A text editor is more versatile than a simple typewriter. Its real power is that it can change text at any time after it has been entered. If you enter a word wrong, you can correct it without eraser crumbs or unevenly-spaced letters. You can even shuffle paragraphs and delete lines without having to retype the text!

Tex-Scribe (the nickname for this text editor computer program) lets you enter,

save, retrieve, and print text using the TI Home Computer system. It is written in TI Extended BASIC and will work with both versions currently available. It is not recommended for use with the old TI-99/4 because it was designed around the keyboard features of the TI-99/4A.

What Do I Need to Use Tex-Scribe?

For greatest flexibility, I recommend the following configuration:

- TI-99/4A Home Computer console
- TI Extended BASIC Command Cartridge
- Color Monitor
- TI Peripheral Expansion Box
- TI Disk Drive Controller Card
- Disk Drive (one or more)
- TI 32K Memory Expansion Card
- TI RS232 Interface Card
- TI 99/4 Impact Printer

With this setup, you can put Tex-Scribe in the DSK1.LOAD disk file. Then it will automatically LOAD and RUN when you select TI Extended BASIC. This system configuration allows you to keep about 150 eighty-character lines in memory at one time.

The minimum system that Tex-Scribe will work with is:

- TI-99/4A Home Computer console
- TI Extended BASIC Command Cartridge
- TV set and the RF Modulator
- Cassette recorder
- TI Thermal Printer

This second configuration severely limits the practical usage of the program, but it will work.

The Tex-Scribe program listing is set up for the TI-99/4 Impact Printer. If you have a different printer or if your printer is set up differently, you may have to change the lines that are bounded by "REM \$\$\$\$\$\$...." statements. Tex-Scribe presently *talks to* printer device name "RS232.DA=8.BA=9600".

If you are using the TI-99/4 Impact Printer, Table 2 is a handy reference for controlling some of the most popular

print modes. If you have a different printer, you will need to refer to its manual.

What Can Tex-Scribe Do?

There are ten main commands listed in Table #1. When Tex-Scribe is ready for your command selection, the prompt ACTION? appears on the TI-99/4A screen. Then you may select a specific command by pressing its corresponding number key followed by the ENTER key.

Because Tex-Scribe only displays the command list when first RUN and when an illegal selection is made, you will find it useful to cut out Figure 1 and tape it just above the number keys on your TI-99/4A console.

Then, by glancing at the labels over the number keys, your choice is clear for responding to the ACTION? prompt.

Before describing each command's usage in detail, here is a summary of Tex-Scribe's other capabilities.

To Forgive and Not Forget

Tex-Scribe will *not* die if you over-stuff the computer's memory with text, leave a disk out of the disk drive, or make some other type of normally *fatal* error. It recovers and gives you a second chance. However it *cannot* survive the mistake of using the QUIT command. . .

Continued on p. 16

Table #1

1. **DELETE A LINE** of text from the file in memory.
2. **INSERT A LINE** of text into the file in memory.
3. **REPLACE A LINE** of text in the file in memory.
4. **CLEAR** the **FILE** work space in memory.
5. **ADD LINES** of text to the end of the file in memory.
6. **SAVE** the **FILE** in memory to cassette or diskette.
7. **LIST** the **FILE** as it is stored in memory to screen or printer. (This allows you to view all the special non-printable characters like those shown in table 3.)
8. **LOAD** a **FILE** from cassette or diskette.
9. **REPLACE** a **STRING** of characters in the file in memory.
0. **PRINT** the **TEXT** of the file in memory in final form on the printer.

THE CASE FOR T199/4(A) PORTABILITY

(Have you ever wanted to take it with you?)

NOW...there is an easy way to keep your T199/4(A) personal computer safe, yet always at your beck and call. Whether heading for school, place of business, or family vacation hideaway, all that's needed at your destination is a television set. The rest is in the bag!

This rugged case is custom designed to safely and conveniently carry:

- Console
- A/C Adapter
- RF Modulator
- Joysticks
- Speech Synthesizer
- Cassette Player & 7 Modules / Cassettes
- OR
- 14 Command Modules / Cassettes
- Module Instruction Books

Other fine features include:

- Tough outer construction
- Keyed Latches
- Thick Absorbent Cushioning
- Upper / Lower Section Divider

(All this and fits under airline seat, too!)

And the price is right...\$59.95

Case closed!

Managing a Mailing List the Futura Way:

A Review

By Maurice E. T. Swinnen

9213 Lanham Severn Road
Lanham, MD 20706

Anyone who has used TI's Mailing List programs has experienced the utter frustration of waiting and waiting for the program to condense a few hundred names, to sort them by Zip code, and to find a name. In addition, to locate a name it had to be spelled exactly as entered in the computer some months before. If that sounds easy, just try to remember the exact spelling of Zbigniew Moraszewski.

But rejoice! There is a "new kid on the block" who knows what he is doing. Charles Ehninger of Futura Software, P. O. Box 5581, Fort Worth, TX, 76108, has written a superb Mailing List program in Extended BASIC. Much faster than anything you have seen before, it sells for \$49.95 and is worth every cent.

His programs require a Memory Expansion and at least one disk drive. Two disk drives are much better, of course, but one will do if you don't mind changing diskettes often. Of course, you will also need some sort of printer for your addresses in label and/or report form. Mr. Ehninger tells me the TI-810 printer is ideal, but I have had good results with the Epson MX-80, the IDS 440 Paper Tiger and even with the Olympia ES-100-R0 electronic typewriter that sports an RS-232 interface.

In the Beginning...

When you insert the diskette and select Extended BASIC, the *MENU* program loads automatically. It offers 11 choices, 1 through 9, plus A and B. But before you are given the menu, you have to sit through something rather boring—the title screen. I would have left it out of this otherwise excellent program. But, as consolation, the title appears only when you fire up the system; by the time you have poured your first cup of coffee, it mercifully has disappeared from the screen for the rest of the day.

The first item you have to select from the menu—you do that only once—is the **COMPUTER ENVIRONMENT**. This allows us to describe our computer system for the program, i.e. type of printer, number of disk drives, and so on.

Your next choice, without a doubt, is **FILE MAINTENANCE**. This program allows you to initialize your data diskette files, set up the various classes and, later perhaps, to add, delete or change classes. Initializing a data diskette requires a little patience—six minutes to be exact. Meanwhile the screen entertains you by displaying the number of the current record being initialized.

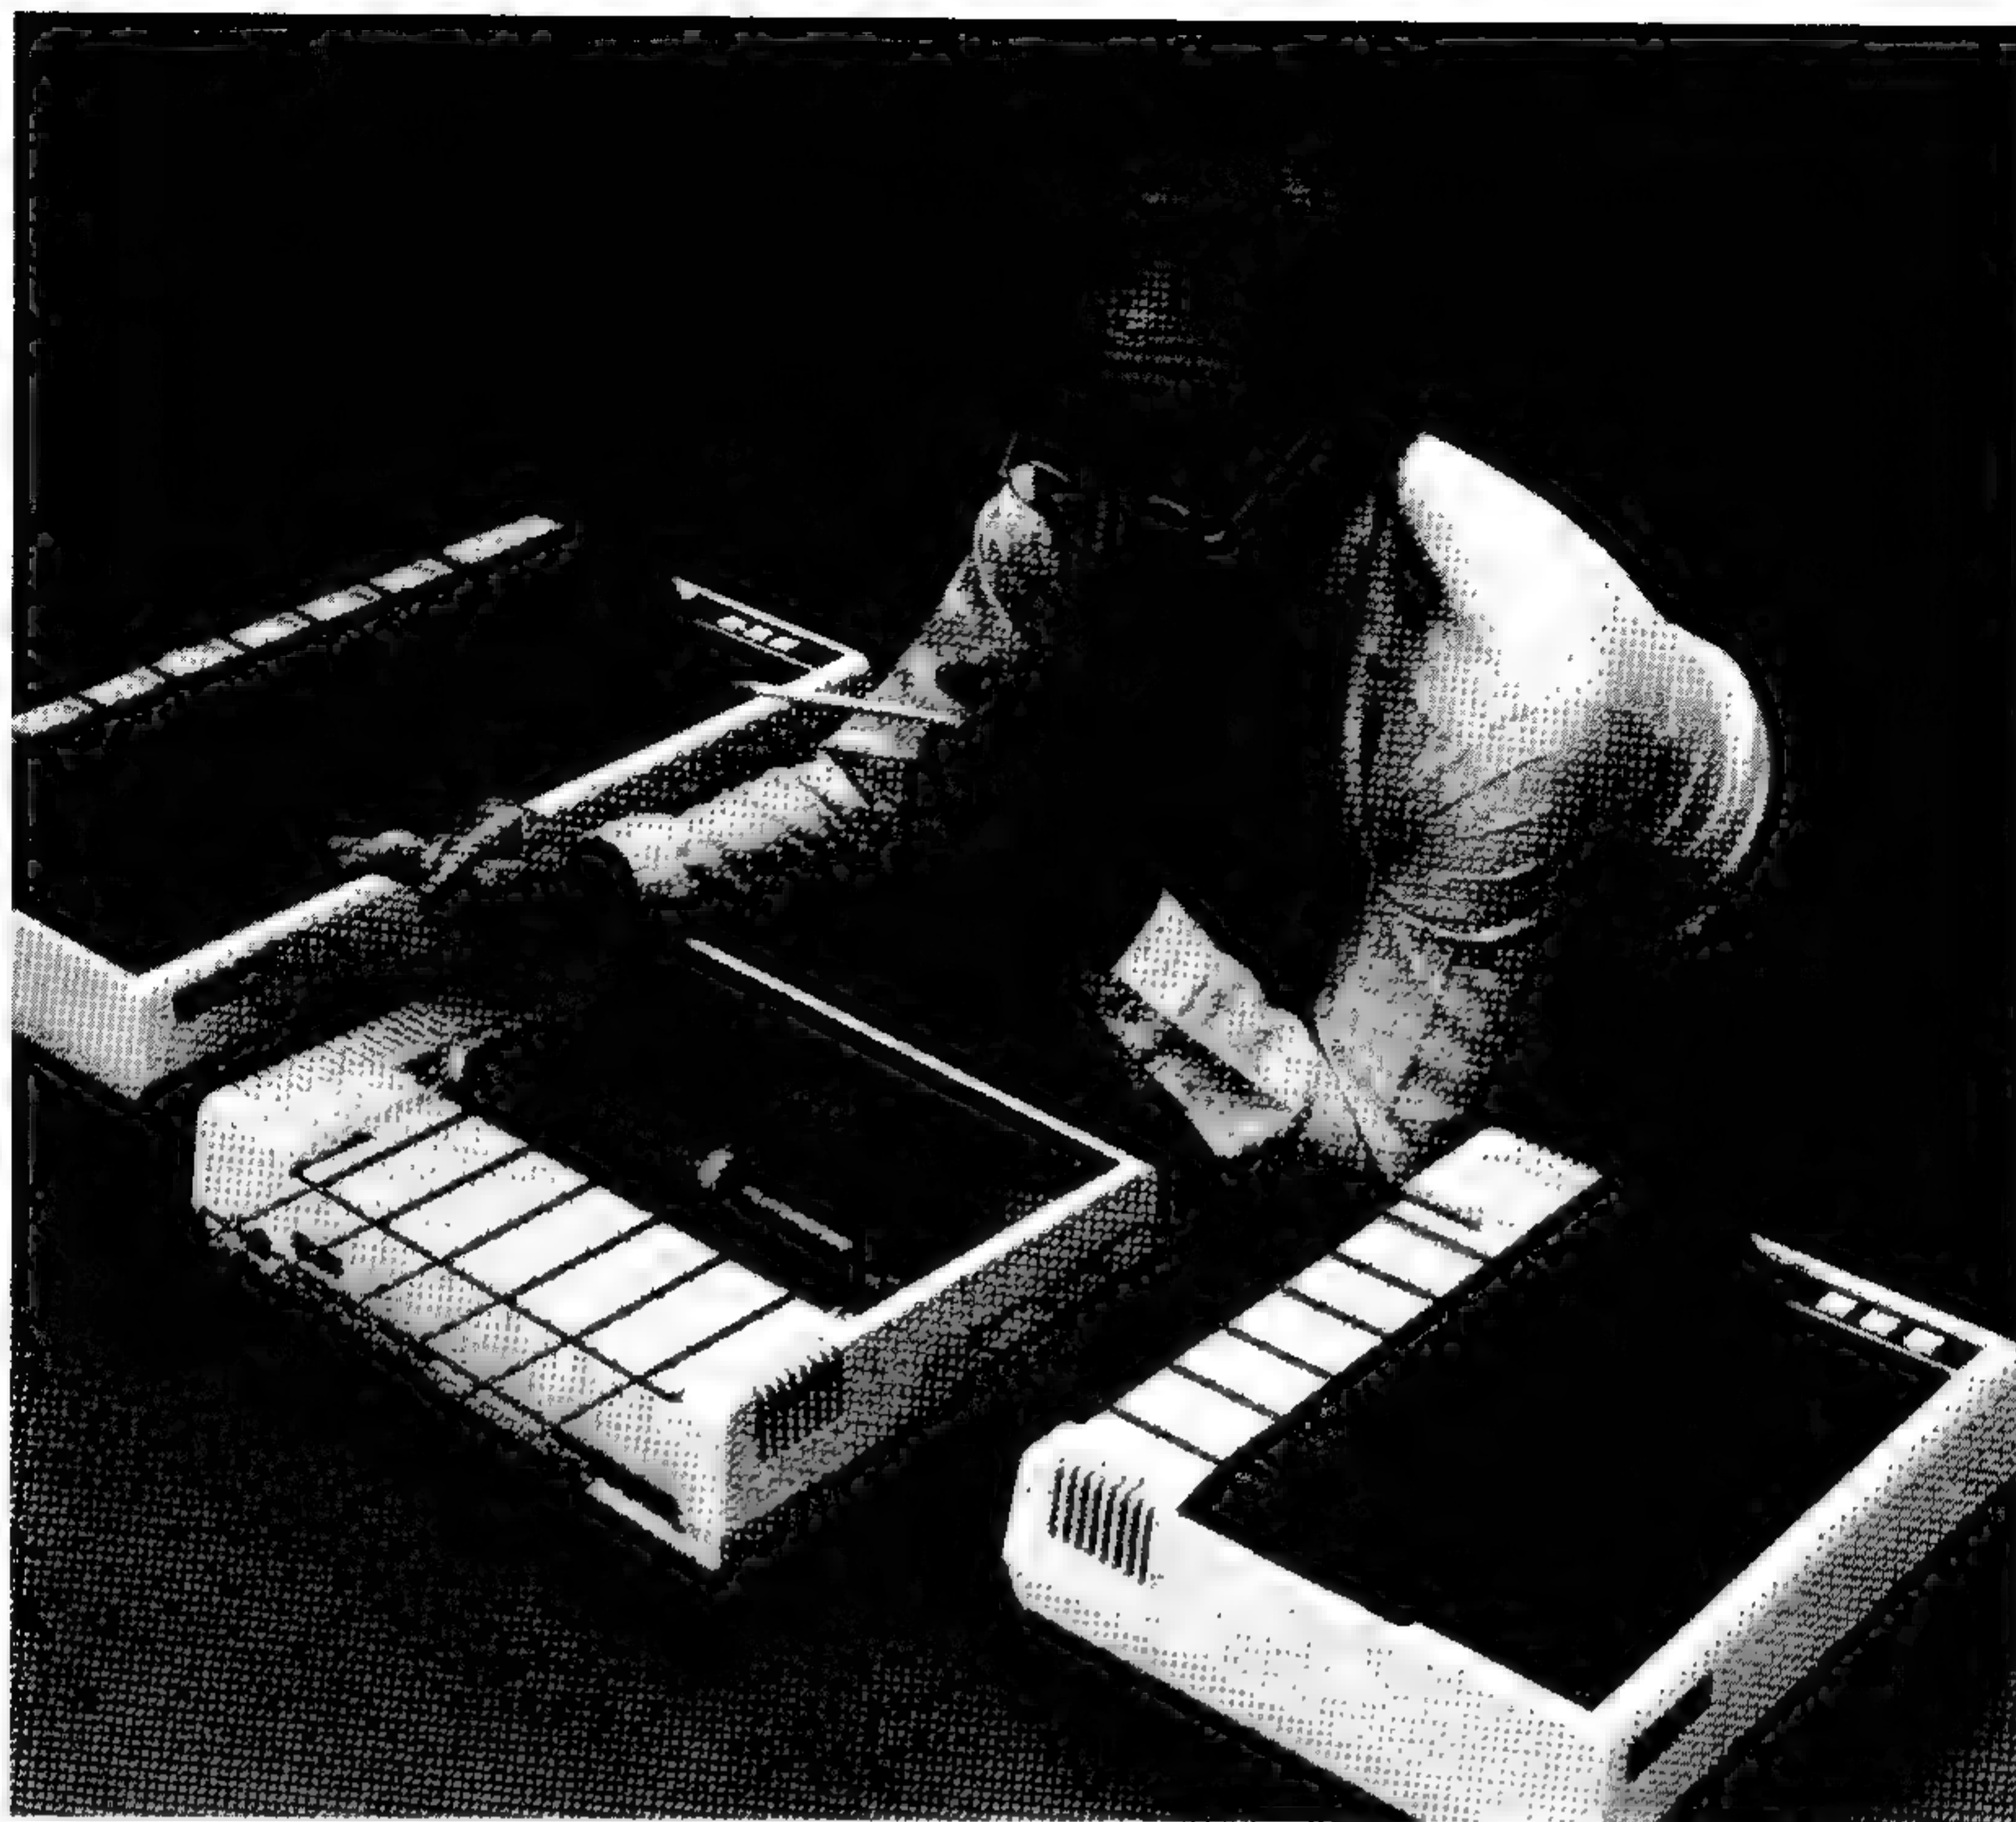

Updating Your Name File

Next on your list you will want to select **ADD/CHANGE/DELETE/LOOKUP**. As the name implies, you may now enter (add) new names and addresses, change existing ones, delete some of them or look them up. Now, this part is real *fun* to do. In reality it is *sheer delight*. The program displays nice lined boxes on the screen and the cursor in one of them. It tells you what to put in each box so you can wander among them and distribute your information.

Personally, I like order. I would have lots of trouble driving on the highway if it weren't for the white lines in the middle. They make for a kind of constant pat on the back, saying "You are doing alright, old boy. Just keep on." The same can be said for the boxes. You know exactly where you stand and how much information you may put in each box. If you try to exceed the limits (yes, I will try that too, once in a while) a gentle, but firm semi-raspberry tone will nudge you back where you belong. Now, that is what I mean by *order*.

Continued on p. 36

"The Program displays nice lined boxes on the screen, the cursor in one of them. It tells you what to put in each box so that you can wander among them and distribute your information."

We're going to make a lot of
fussy people very happy.

Epson.

A lot of nitpickers have tried to find a fault on the new Epson MX Series printers. And failed.

First they looked at things like our print quality — which is excellent — and our character fonts, which is an astonishing array of 66 different type styles, including italics, a handy subscript and superscript for scientific notation and small print, international character symbols, and one-pass underscore.

Then they checked out our GRAFTRAX-PLUS graphics, which gives them ultra-high resolution, bit image graphics at up to 120 DPI horizontally, and 216 DPI vertically. Nothing to fuss about there.

Next they looked at the other MX Series features,

like programmable form length, horizontal tab and right margin; software printer reset; true backspace; and a bidirectional, logic seeking, disposable print head. And the choice, which includes the world's best selling printer, the MX-80, the MX-80 F/T with both friction and tractor paper feed, and the 136-column MX-100. And the reliability rate, which is over 98%.

Finally, they looked at the price. And they smiled.

The Epson MX Series. You might say it was made for fussy people.

By fussy people.

4232 Rawlins #101
Dallas, TX 75219

*'Twas the night before Christmas,
The same OLD Routine,
Just waiting for something
To come on the Screen.*

*My programs were Loaded
From tape with great care,
In the hopes that when RUN
There would be no Error.*

*In a CALL SOUND Routine
There arose such a clatter,
I typed in a BREAK to see
What was the matter.*

*I then ran a LIST,
I was checking it slow,
Found not a GO TO,
But instead a TO GO.*

*When what to my wondering
Eyes should appear,
But 8 K of Memory,
Give or take a Byte here.*

*With a brand NEW program
That ran oh so quick,
I knew it was written by
Jolly St. Nick.*

*More rapid than Memory
His Cursors they came;
In a SOUND Subroutine,
He CALLED them by name:*

*"On Floppy, On FOR-NEXT,
Now Cassette and Printer,
On RANDOM, on COSine,
Let's go while it's winter."*

*To the top of the screen
They Scrolled at his CALL,
"Now DISPLAY, Now DISPLAY,
Now DISPLAY, you all!"*

*He wrote not a word,
But went straight to his work
Of DISPLAYing graphics
Without any jerk.*

*And when I hit ENTER,
That dear little man
Paused and played Trek Wars
As only he can.*

*Then he ENDED the program,
Packed up his Print-Out,
And as the screen CLEARED,
I thought I would shout.*

*But I heard him REMark
As he flew like a Sprite,
"Merry Christmas to all,
And to all a good BYE!"*

Tex-Scribe ... from p.9

You Set the Line Length

You are allowed to set the number of characters per line when Tex Scribe is first started, after a LOAD FILE command, and after an illegal response to the ACTION? prompt.

For cassette storage, the maximum line length is 192 characters; for diskette storage, the maximum is 254 characters. The default line length is set to 80 characters.

If you exceed the limit that you have chosen when entering a line of text, Tex Scribe will truncate the line back to the nearest full word and display the result.

Build Documents

You can merge several short files of text into memory by using selection number 8, LOAD FILE. This allows you to, for example, build a letter by loading a *letterhead* disk/cassette file, entering text directly from the keyboard, and merging a standard *closing* disk/cassette file.

Re-Arrange Paragraphs

Tex-Scribe's SAVE FILE command lets you save any range of text lines from memory to storage. You can move paragraphs in the text by using these partial file SAVES to *separate* disk/cassette files (clearing the memory) and then re-merging them (using LOAD FILE) into memory in the new order.

Printer Controls

The TI-99/4A CTRL key can be used to generate the special command sequences needed to cause printers like the new TI-99/4 Impact Printer to do its neat tricks, such as emphasized or italics printing (see Tables 2 and 3).

Using the Tex-Scribe Functions

Let's suppose that you have loaded the program from either the 99'er

Magazine-On-Tape cassette or through painstaking keyboard entry. If you have a disk system, you may save the program on a file called DSK1.LOAD. Once you have created this disk file, turn off the console, wait a few seconds and then turn it back on. Now select Extended BASIC and wait patiently for the program to start automatically (about 45 seconds).

The Tex-Scribe *menu* of commands should now show on the screen along with the line-length-setting question. For now, we will just press ENTER to accept the default length of 80 characters. After a slight pause, the ACTION? prompt appears.

Let's start building a text file. Do this by selecting the ADD LINES command—Press the number 5 key, then press ENTER.

Now we are ready to type lines of text into the file. Make a note of what you see on the screen. The only way to leave this ADD LINES command is by typing two up-arrows (^^) on a line by themselves, followed by ENTER.

In this command you can make changes only to the line you are currently entering. To make changes to a line previously entered you must get out of this command and use another command (DELETE A LINE, REPLACE A LINE, or REPLACE STRING).

Type in the following line:

The dog chased the cat up
the big oak tree in the yard
only to find that the cat
could reach the roof of the
house.

Now press ENTER. Because the line was longer than the 80 character length specified, Tex-Scribe truncated and re-displayed the line for you. Now you may enter the rest of the sentence on line two and press ENTER. On line three just enter the two up-arrows (^^) and press ENTER. Now we have something to work with in the memory.

Enter a 2 in response to the ACTION? prompt, for the INSERT A LINE command. Insert a line before line one. Enter anything you like here and note that after the new line is entered, the line numbers in memory are resequenced. The new line is now line one, the old line one is now line two, etc.

Next, say that we made a mistake in our text. We really wanted to say "pink rat" everywhere we said "cat." Press number 9, the REPLACE STRING command. Enter "cat" for the string to replace. Enter "pink rat" for the new string. Before the search is started, you are asked the range of lines to look at for the string "cat". Select "0" to have all lines searched. At the first occurrence of "cat" in any line, the string "pink rat" is substituted. Each modified line shows on the screen.

Notice that on the end of each line are the characters LFCR? The LF stands for *line feed* and the CR stands for *carriage return*. Tex-Scribe always converts any *non-printable* characters (which are usually control codes to the printer) to mnemonics when it displays the line to the screen or in response to a LIST FILE command to the screen or printer.

Speaking of LIST FILE, select number 7 and list all the text in memory to the printer. Notice that the line numbers and non-printable characters are there in addition to the text you entered. This command is used to guide you through text modifications; it shows you exactly what is in the memory. This command allows you to select the range of lines to list; once again, "0" will cause all lines to be selected.

Select command number 6, SAVE FILE and choose your storage device. If it is the disk, store the text into disk file JUNK. Now you are safe. If you desire, you may turn off the power and continue tomorrow.

Select CLEAR FILE command (number 4) which erases the text in the memory.

Table 2 — TI-99/4 Impact Printer — Mode Commands

HOLD + PRESS then	PRESS for	FUNCTION
CTRL O		Set 16.5 cpi mode
CTRL R		Cancels 16.5 cpi mode
CTRL N		Set 5 cpi mode
CTRL T		Cancels 5 cpi mode
CTRL .	4	Sets the <i>ITALICS</i> mode
CTRL .	5	Cancels the <i>ITALICS</i> mode
CTRL .	E	Sets the emphasized mode
CTRL .	F	Cancels the emphasized mode
CTRL .	G	Sets the double strike mode
CTRL .	H	Cancels the double strike mode

Table 3

Non-Printable Character Definitions

MNEMONIC	99/4A KEY SEQUENCE	CHARACTER DEFINITION
SOH	hold CTRL&letter A	Start of heading
STX	hold CTRL&letter B	Start of text
ETX	hold CTRL&letter C	End of text
EOT	hold CTRL&letter D	End of transmission
ENQ	hold CTRL&letter E	Enquiry
ACK	hold CTRL&letter F	Acknowledge

MNEMONIC	99/4A KEY SEQUENCE	CHARACTER DEFINITION
BEL	hold CTRL&letter G	Ring bell (or beep)
BS	hold CTRL&letter H	Backspace
HT	hold CTRL&letter I	Horizontal tabulation
LF	hold CTRL&letter J	Line feed
VT	hold CTRL&letter K	Vertical tabulation
FF	hold CTRL&letter L	Form feed
CR	hold CTRL&letter M	Carriage return
SO	hold CTRL&letter N	Shift out
SI	hold CTRL&letter O	Shift in
DLE	hold CTRL&letter P	Data link escape
DC1	hold CTRL&letter Q	Device control 1 (X-ON)
DC2	hold CTRL&letter R	Device control 2
DC3	hold CTRL&letter S	Device control 3 (X-OFF)
DC4	hold CTRL&letter T	Device control 4
NAK	hold CTRL&letter U	Negative acknowledge
SYN	hold CTRL&letter V	Synchronous idle
ETB	hold CTRL&letter W	End of transmission block
CAN	hold CTRL&letter X	Cancel
EM	hold CTRL&letter Y	End of medium
SUB	hold CTRL&letter Z	Substitute
EXC	hold CTRL & " "	Escape
FS	hold CTRL & " "	File separator
GS	hold CTRL & " "	Group separator
RS	hold CTRL&number 8	Record separator
US	hold CTRL&number 9	Unit separator

FIGURE 1

DELETE A LINE	INSERT A LINE	REPLACE A LINE	CLEAR FILE	ADD LINES	SAVE FILE	LIST FILE	LOAD FILE	REPLACE STRING	PRINT TEXT
------------------	------------------	-------------------	---------------	--------------	--------------	--------------	--------------	-------------------	---------------

Try LIST FILE to the screen now . . . As you can see the memory is empty.

Because the memory is empty, this is a good time to try the LOAD FILE command. Select number 8 and the device you are using for storage. If it is the disk system, load from the JUNK file. After loading, you are again asked to choose the length of line. Complete that task, and select the LOAD FILE command one more time. Now Tex-Scribe gives you a warning. Because you already have something in memory, you have a chance to CLEAR the FILE or MERGE a FILE from disk (or cassette) with the lines

already in memory. Select "M" for MERGE and continue to load the JUNK file again.

Let's PRINT TEXT to see what is in the memory now. Select number 0. This command prints faster than the listing function because Tex-Scribe doesn't have to slow down for translation of the non-printable characters. Use this command to print the final results of all your text editing.

Select number 1 for the DELETE A LINE command. When asked, select a line to delete. Use LIST FILE to list the memory to the printer again. Note that

the file is resequenced *without* the deleted line.

The only command not yet tried is number 3, REPLACE A LINE. Go ahead and select it. Have you noticed that the screen turns red when you select a command that modifies text? That is to keep you awake during such modifications! Type in a replacement for line 3. Now PRINT TEXT to the printer to see the difference.

Well, that's the course. You now have a simple, modern *wordsmith's* tool kit at your disposal. The more you use it, the more useful it becomes.

Tier

EXPLANATION OF THE PROGRAM *Tex-Scribe*

Line Nos.

100-180 Rem's: title, and version.
190 Disable sprites. To be used only with expansion memory.
200-320 Initialize variables.

FFF Software Presents . . .

SHUTTLE COMMAND

Earth is threatened by thousands of Russian Attack Military Satellites (RAMS). The United States readies the space shuttle Enterprise to combat the menace and selects you as its commander.

Your view is from the cockpit and you see the RAMS approach (in 3-D) from deep space. Your mission is to destroy them before they destroy Earth — or you!

The producers of the now-classic TI-ASTEROIDS bring you a new and challenging space game. Joysticks are optional, but recommended, for this exciting Extended BASIC program which features 1 or 2 player capability, 12 skill levels and great graphic effects.

Available for only \$17.50 on cassette or diskette

Also Available . . .

TI-ASTEROIDS

See what the Experts are saying:

"TI-ASTEROIDS is by far the best space game we have seen programmed for the 99/4 in an [Extended] BASIC Language."

Charles LaFara, President
International 99/4(A) Users Group
Newsletter (Vol. 1, No. 7)

"I was impressed to see what could be done in Extended BASIC . . . by such firms as FFF Software (Trenton, NJ) with their TI-ASTEROIDS game . . ."

Gary M. Kaplan, Editor
99'er Magazine (Vol. 1, No. 4)

*Available for \$17.50 on cassette or diskette
or for only \$10.00 if purchased
together with SHUTTLE COMMAND.*

Plotting With The Home Computer

By Joseph G. DeVincentis, Jr.

P. O. Box 375
University of Dallas
Irving, TX 75061

The Assembly Language routines presented in this article will let Home Computer users draw axes, plot curves, and even draw objects in perspective. The software, consisting of plotting routines for the Mini Memory Cartridge, accesses the powerful graphics capabilities of the TI-99/4A through TI BASIC.

The routines supplied in this package require either of the following peripheral configurations:

1. Memory Expansion, cassette recorder, Mini-Memory, and assembled (object file) routines available on this issue's "99'er Magazine-On-Tape." [See page 69]
2. Memory Expansion, disk system, Mini-Memory, Editor/Assembler, and source files (hand entered from listings included with this article.)

Note: The large size of these subroutines, and the fact that part of Mini-Memory is required for the Line-by-Line Assembler, dictates that the source files be assembled via the Editor/Assembler rather than the Line-by-Line Assembler that comes with the Mini-Memory. We are therefore making the object file available on tape so that readers without an Editor/Assembler and disk system can take advantage of this powerful software—Ed.

Theory of Operation

The routines work on the basis of a plotter. The screen is the plotter's surface, and the routines control an imaginary "pen." The pen can be moved with or without drawing a line on the screen, and if it tries to draw off the screen, it will change no data other than the position of the pen.

The resolution of the screen is 192 pixels (dots) vertically and 256 horizontally. The routines allow you to clear the screen, scale the screen, draw X and Y axes, output text, change the pen's position and draw lines. Because the routines take advantage of the advanced graphics mode of the TMS9918A Video Display Processor (VDP), compromises had to be made (due to memory requirements in this mode).

The VDP takes up 12K bytes of space in VDP RAM to define the shape and color of the characters. This leaves very little room for BASIC programs. Therefore, a buffer was created in the Memory Expansion to keep the character shape table. Because this buffer is not in the VDP RAM, the plot cannot be seen until the GRAPH command is issued. Also, once this command is issued, the BASIC program will be destroyed. Therefore, it is advisable to save your BASIC programs before running them!

As a positive side effect, after the plot is put on the screen and the user returns to the power-up screen (by pressing the Q key), the plot will remain unchanged in the Memory Expansion Buffer. The plot will exist as long as the user does not issue the GCLEAR

command or turn off power to the console or the Memory Expansion. Therefore, it is possible to add data to a plot even after looking at it several times.

The line-drawing algorithm is based on Bresenham's algorithm described in *Principles of Interactive Graphics* by William M. Newman and Robert F. Sproull (McGraw-Hill Book Company). The algorithm was originally designed for control of a digital plotter but is easily adapted to the type of display used on the 99/4A. For a complete discussion of this algorithm, refer to pages 25 and 26 of the book mentioned.

Within the line-drawing routine of the package, A and DELTAA refer to the axis of greatest movement. X and Y keep track of the pen's current position and can only be changed by using the DRAW and MOVE commands. Bresenham's algorithm covers the remainder of the DRAW routine.

Descriptions of Plotting Routines

The routines may be used either as program statements or as interactive commands (hereafter, the term *command* will refer to the statement as either a program statement or an interactive command).

GCLEAR

This routine initializes the graphics package. The plotter surface is cleared and the pen is set for the lower left-most pixel. The scale is set such that the X axis has a minimum value of zero and the maximum value is 255. The Y axis has a minimum value of zero and the

maximum of 191. The lower left hand pixel has the coordinate value of (0,0). The TI BASIC syntax is:

```
CALL LINK("GCLEAR")
```

There are no parameters passed with this command.

SCALE

The SCALE command lets you set the minimum and maximum values of the screen. These values can be real or integer. They may be passed as either numeric expressions or as numeric variables. The minimum must be less than the maximum, otherwise, a *BAD ARGUMENT IN . . . type error will be issued. The TI BASIC syntax is:

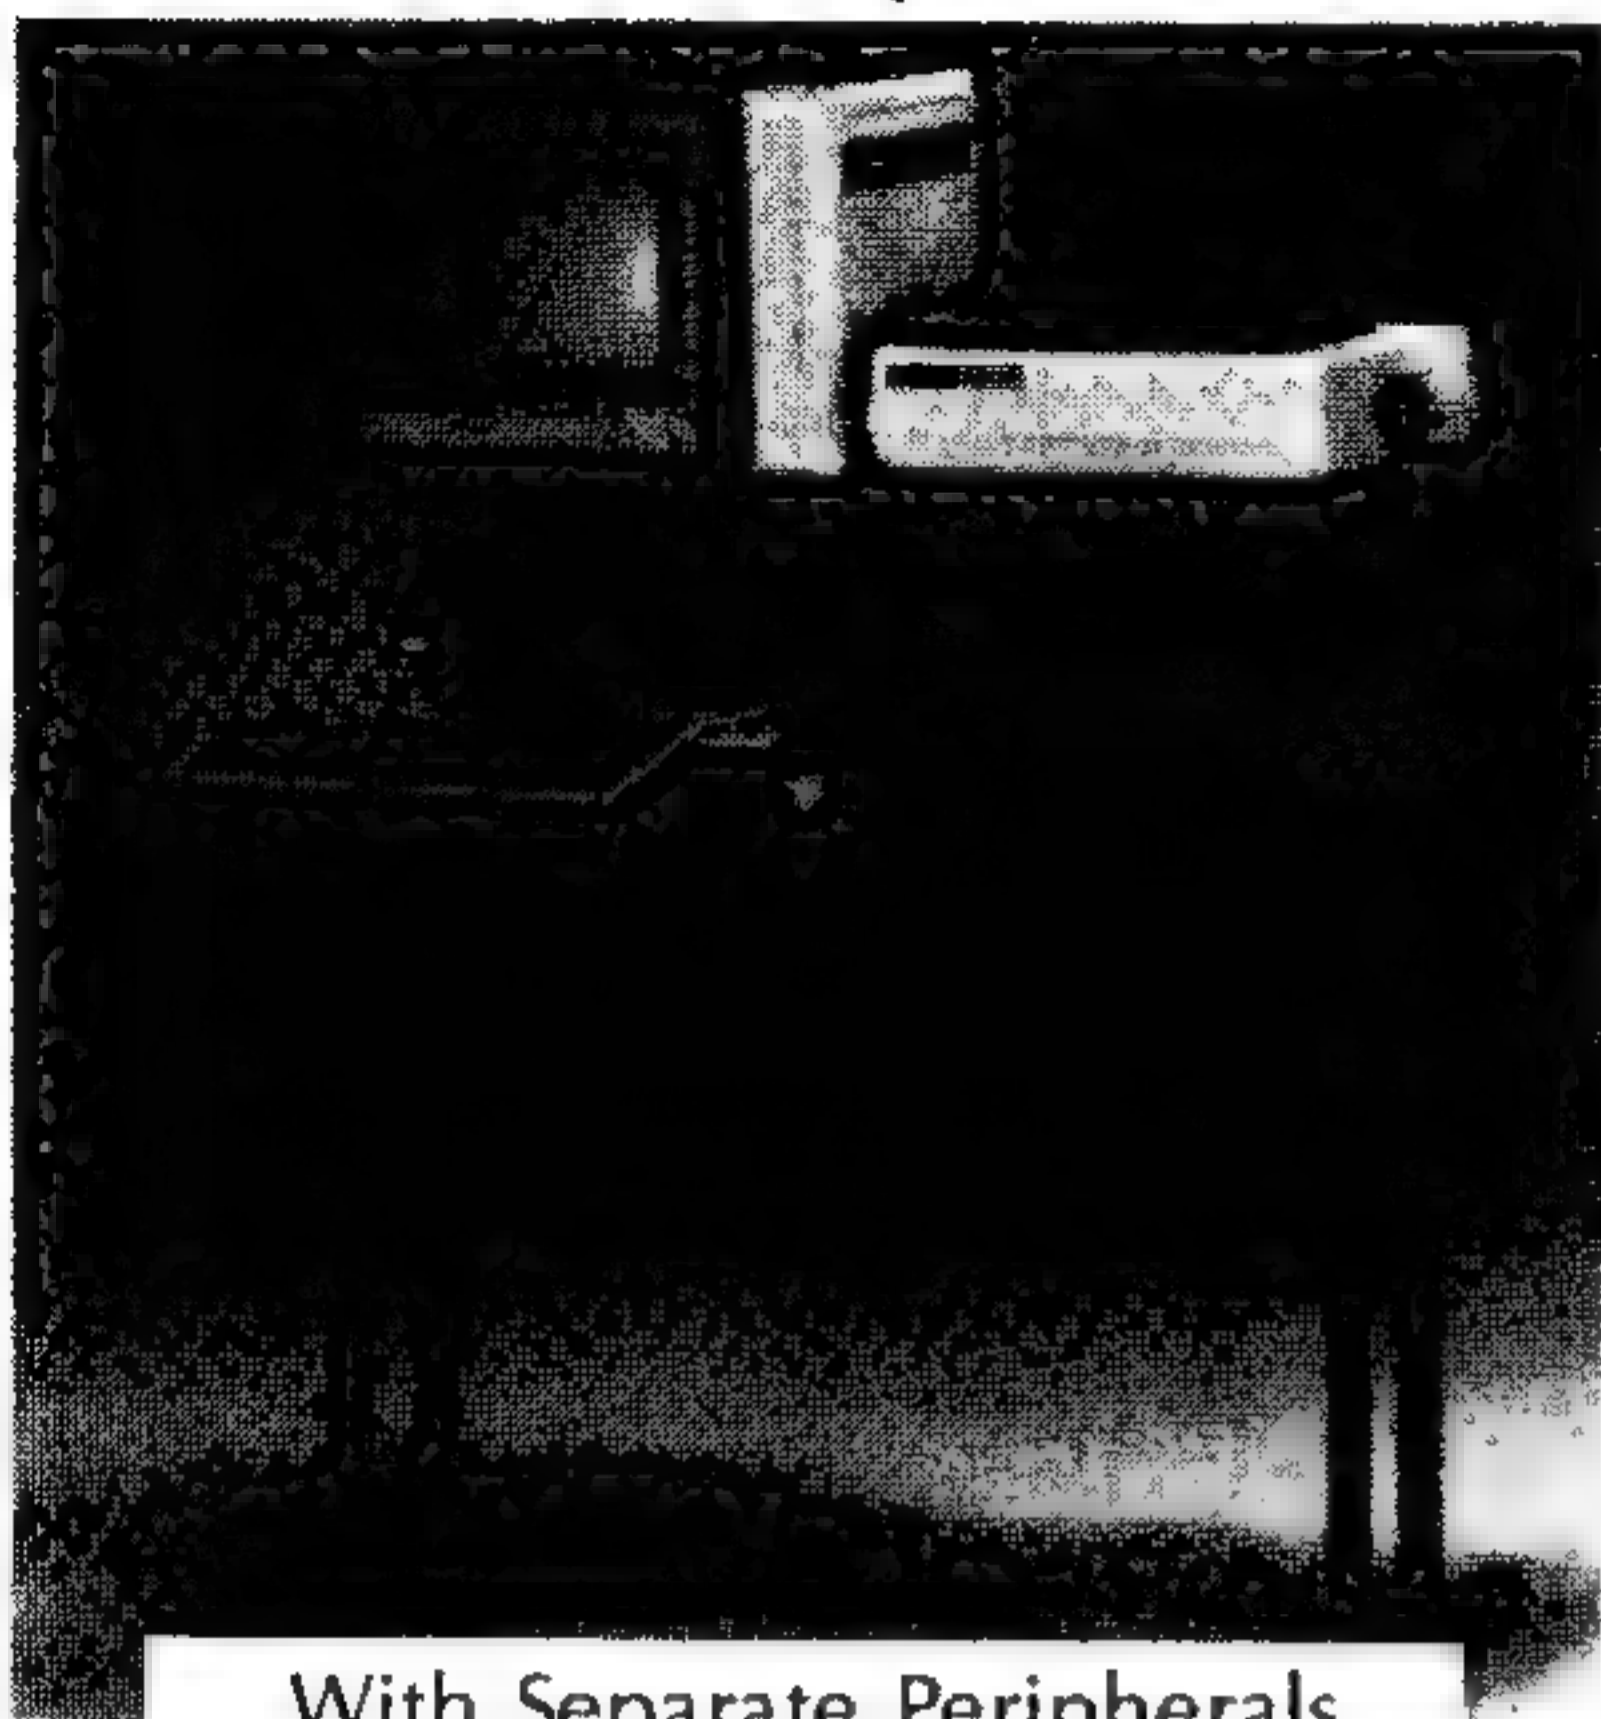

```
CALL LINK("SCALE",Xmin,Xmax,Ymin,Ymax)
```

The variables may not be passed through numeric arrays. The routines do not support arrays at this time. The scaling of the screen may be changed at any time without affecting the data which is already in the screen buffer. When the SCALE command is used, the absolute position of the pen on the screen is not changed. For example, if the pen were in the lower left hand corner of the screen and the scaling were changed, the position of the pen

The graphic capabilities are unique to the Video Display Processor (VDP) in the 99/4A. However, if the VDP in a 99/4 is changed from a TMS9918 to a TMS9918A (the chip in a 99/4A), these routines are also usable with the 99/4. The TMS9918 and TMS9918A are pin compatible and any software designed for the 99/4 will run with the new chip in place, with no modifications. [This chip swapping should only be done by a competent technician—Ed.]

The TI Home Computer Desk

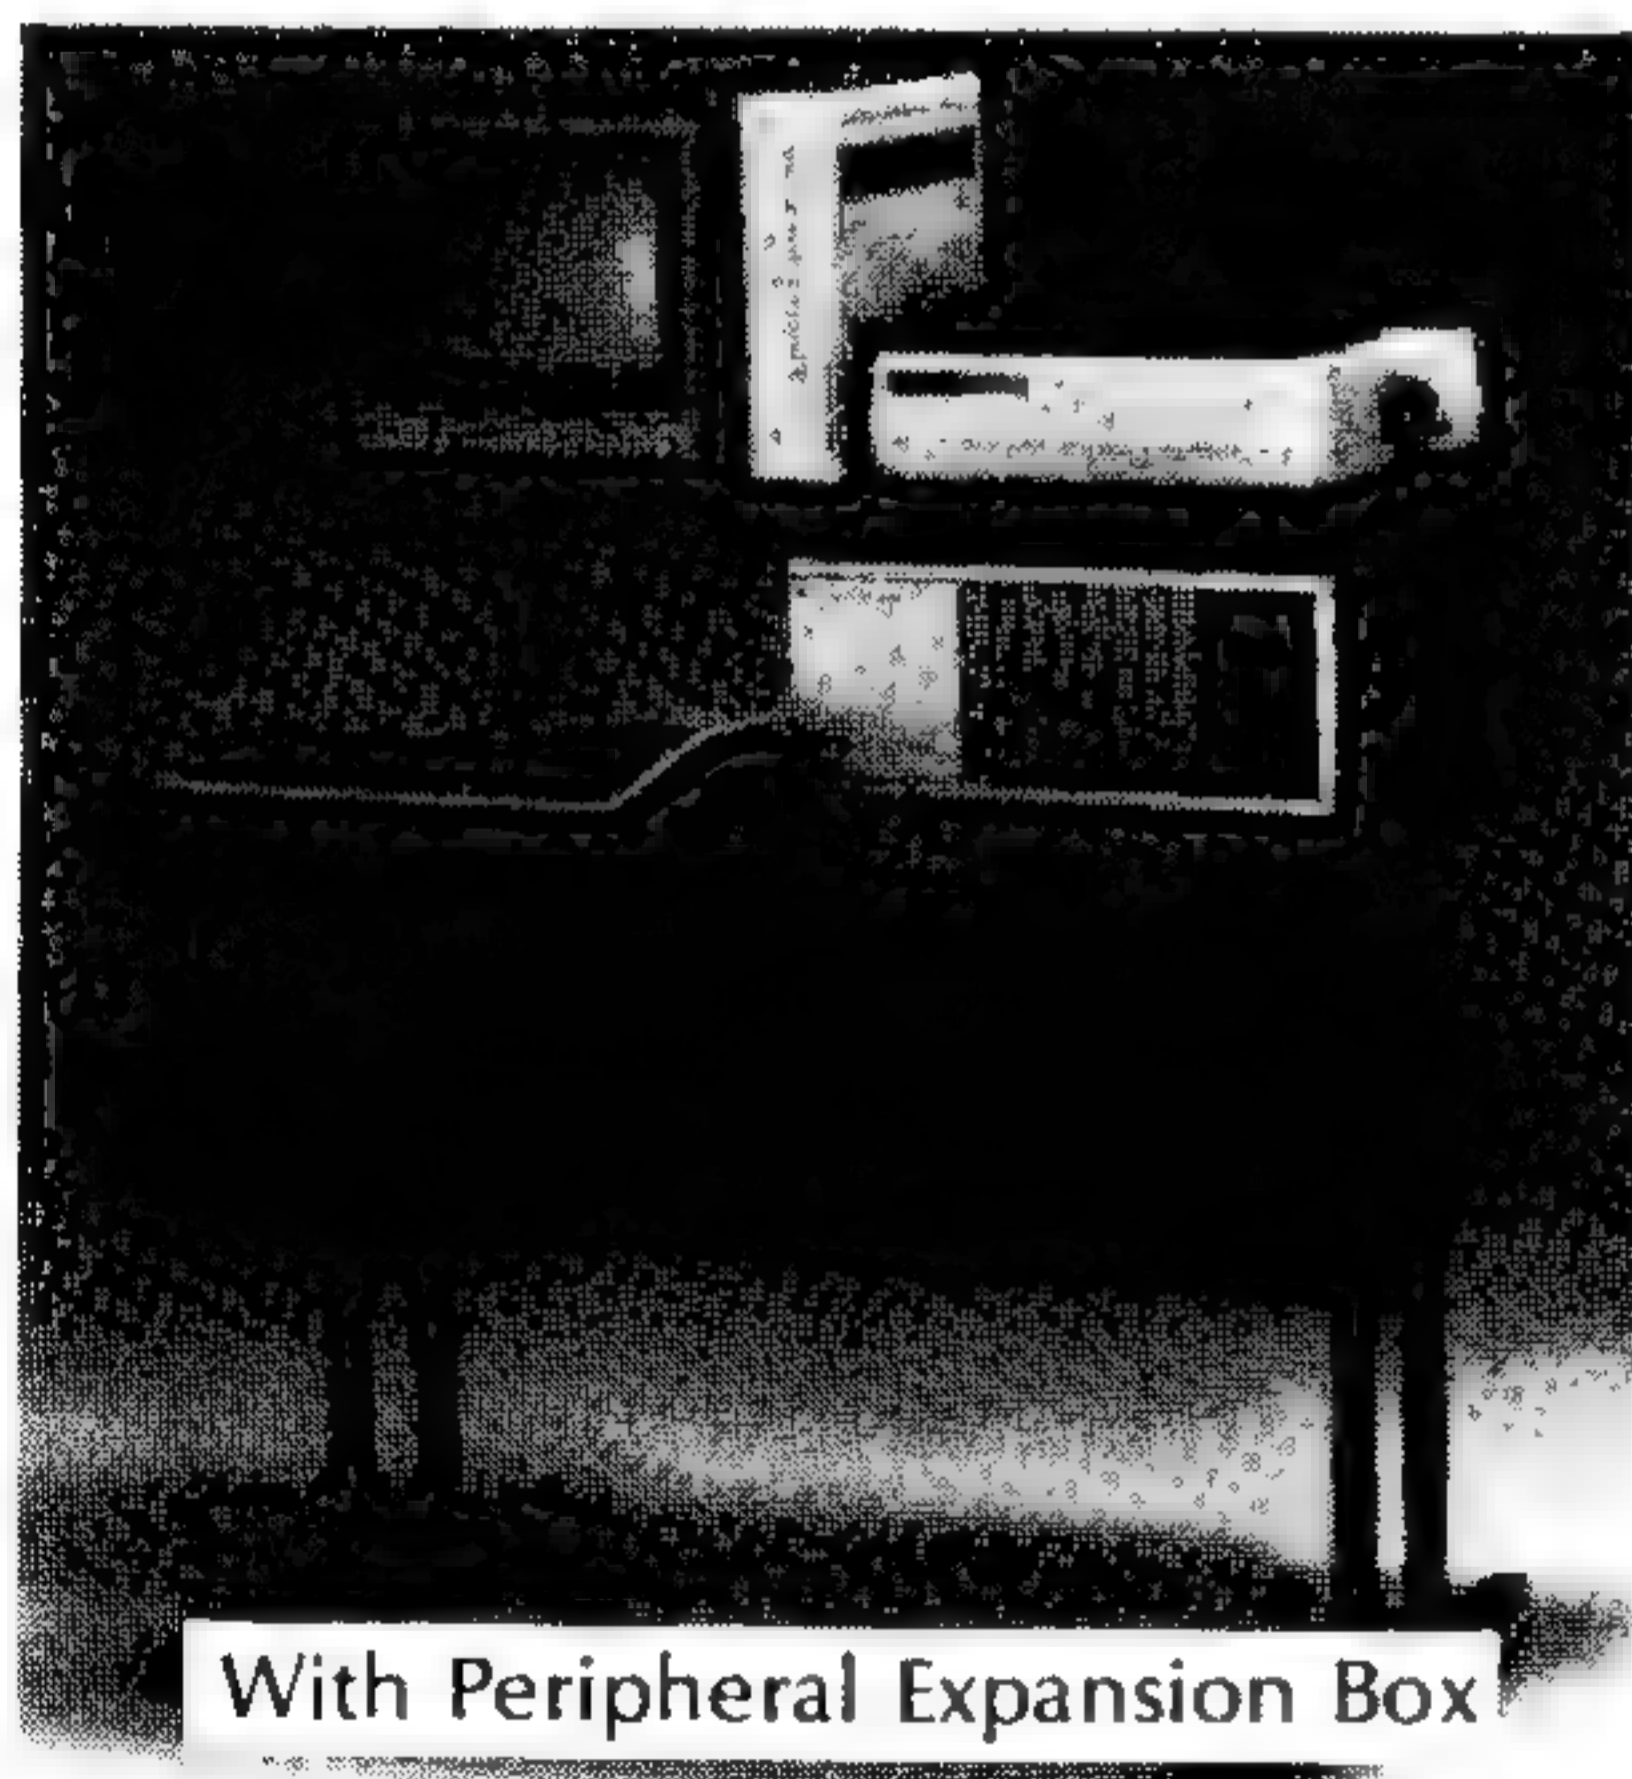

Organize your system as you expand it with
"The Home Computer Desk"

With Separate Peripherals

These are complete work stations with laminated surfaces.

The desk assembles without tools in minutes.

With Peripheral Expansion Box

Choose from these three convenient sizes:

- 32 Desk - 32W x 24D, top shelf 32W x 12D - \$220
- 40 Desk - 40W x 24D, top shelf 40W x 12D - \$240
- 48 Desk - 48W x 24D, top shelf 48W x 12D - \$260
- Choice of colors - Honey teak or Walnut, with black legs.

Note: All top shelves are 36" from floor, and the work surface height is 26½ inches from floor.

All prices subject to change without notice. F.O.B. Dallas, TX

HCS HARDIN'S COMPUTER SOLUTIONS INC

P.O. BOX 634 RICHARDSON, TX 75080
834 N. GLENVILLE/RICHARDSON, TX 75081

(214) 699-8998

would *still* be in the lower left-hand corner, no matter what the new scaling.

DRAW

The DRAW command will move the pen from its current location to another point, specified by the user. Since the routine keeps track of the current pen position, all that is necessary is to specify the point to which the pen is to DRAW. The DRAW command is used as follows:

CALL LINK("DRAW",Xposition,Yposition)

The restrictions and freedoms of the parameters for this command are the same as those for the SCALE command. The X and Y positions are the coordinate values of the destination point for the pen. If the position specified is off the screen, the pen will move off the screen, but will only draw the line to the edge of the screen. Although there is no risk of destroying data by drawing off the screen, there are dangers of numeric overflow.

MOVE

This routine performs the same function as the DRAW command, except that the pen is "lifted" before being moved and therefore draws no line. The pen is put back down after reaching its new location. The TI BASIC syntax is:

CALL LINK("MOVE",Xposition,Yposition)

The parameters are the same as the DRAW command.

XAXIS

This command draws a horizontal axis specified by a minimum and maximum along the X axis. The axis will intersect the Y axis at a user specified point. The position of the pen will remain unchanged. Use of this command is as follows:

CALL LINK("XAXIS",Xmin,Xmax,Yintercept)

The parameters may be either numeric expressions or variables. Again, array elements are not allowed.

YAXIS

This command is the Y axis counterpart to the XAXIS command. The TI BASIC syntax is:

CALL LINK("YAXIS",Ymin,Ymax,Xintercept)

LABEL

This command allows the user to output text to the screen, and is capable of outputting the ASCII characters, including upper and lower case. All characters with an ASCII value of less than 32 will be made to look like a 32 (space). All characters with a value greater than 127 will be equated to 127. In this case, this is also a space. Due to the nature of character definitions, the characters will be output to the character blocks, starting at the block designated by the current position of the pen. If the string is contained in a string variable (arrays are not allowed), the TI BASIC syntax is as follows:

CALL LINK("LABEL",variable)

If the user wishes to output the string directly, the TI BASIC syntax is:

CALL LINK("LABEL","string")

GRAPH

This command is used to bring the plots to the screen. The use of GRAPH destroys any BASIC program in memory—so *save your BASIC program before running it*. After the command is invoked, the plot generated will appear on the screen. You can leave this mode by pressing the 'Q' key. The power up screen will appear. If the machine is not turned off, you may add to your graph by returning to TI BASIC and running a new program. The TI BASIC syntax is as follows:

CALL LINK("GRAPH")

This routine requires no parameters.

Loading the Plotting Routines into Mini-Memory

Once the routine has been loaded into the Mini-Memory, it is not necessary to reload it unless the routine has been destroyed

Continued on p 60

TEXAS INSTRUMENTS

TI-99/4A Home Computer

Whether you're already knowledgeable about computers or want to learn how to get started, the TI-99/4A is for you. The TI-99/4A gives you an unmatched combination of features including:

- Powerful TI-BASIC
- NEW typewriter keyboard
- Up to 72K total memory capacity

Service is unparalleled with the broad TI nation-wide service center network and TI's No Cost Exchange Warranty Program. The retail price is \$495. Your special BACH Company price is slashed to a low \$299.4A. Please call to get a FREE software list

Letters . . . from p. 7

Dear Sir:

In talking to people about the TI-99/4A, the conversation usually turns to the machine's speed. According to the 9900 Family Systems Design and Data Book, the 9900 CPU has a speed of 3.3MHz (page 2-12). Some people believe TI is not as fast as some of the other micros on the market. Let's look at the following piece of code:

```
10 BO = 27200.00
20 FI = .0066666667
30 PYMT = 209.93
40 NK = 299
50 FOR JS = 1 TO NK
60 PII = BO * FI
70 PPR = PYMT - INT(PII * 100. + .50) / 100.
80 BO = BO - PPR
90 NEXT JS
100 PRINT BO;PPR;PII
```

On the 99 4A, it takes about 20 seconds to run. A friend has an APPLE with the Z80 processor installed along with Microsoft BASIC. Using the APPLE BASIC, execution time was about 10 seconds. With Microsoft BASIC, this time lowered

to 8 seconds. In doing further research, it was discovered that the 8 bit processors use 8 digit precision. For a different kind of test, a double precision feature was turned on in Microsoft BASIC. This increased the accuracy to 15 digits. The code was again executed, this time taking 32 seconds to complete. TI's precision is fixed at 13 digits. This gives a reasonable explanation for TI's "slowness." One other item was noticed; during one of the tests a constant was entered incorrectly. This created an overflow condition on the APPLE but the TI chugged on and finally came up with an answer printed in exponential format! For speed, accuracy and flexibility, TI is number one.

Joseph W. Kalinski
Buffalo, NY

Interesting data Joseph, on TI BASIC. It might be interesting to compare the T Assembly Language version to the APPLE Assembly Language version.

Dear Sir:

I just finished entering the program "Pre-School Block Letters and Data Compaction" by Howard

G. Drake (Vol. 1, No. 6, p. 73) into my TI-99 4A. The program is very useful in illustrating data crunching procedures and its "humanistic" graphics execution should be of value to pre-readers (I intend to add this program to the curriculum for the 4 and 5 year-olds at a parent coop school here in Davis).

I congratulate the 99'er Magazine for overall excellence and especially for its commitment to educational enrichment of the traditional curriculum of our schools.

Ratchford Higgins
Davis, CA

We plan to have more programs and reviews of the CAI type, Mr. Higgins. As you are aware the TI Home Computer can be a great tool for education.

Dear Sir:

I decided to write a short note of compliment about your magazine before I go back to reading my first issue (Vol. 1, No. 6). It's great to have a magazine that deals only with the TI-99/4A and does not bother with those other "computers."

I especially liked "The Beginner's Guide to Cassette Operation with the Home Computer." Since I've only had my 99/4A since March, I am still a novice programmer. This article cleared up some questions I had on use of a recorder and use of files.

Peter Donovan
Dayton, OH

Thanks Peter. I hope you continue to find 99'er Magazine the most useful TI Home Computer peripheral.

Dear Sir:

I've recently become a TI-99 4A owner and a subscriber to your terrific magazine. Your magazine is like an oasis in the desert for me. The evolution from first issue to current issue has been terrific. I think you're putting out not just the best TI magazine, but the best hobbyist microcomputer magazine. I would like to see more articles evaluating hardware (both TI and TI compatible), especially disk systems and printers, and more articles on programming tricks and design. But so far my only serious complaint is that 99'er doesn't come often enough.

Mark Magner
Mississauga, Ontario, Canada

Our going monthly should take care of your only serious complaint. We plan to increase our reviews of both hardware and software. Mark.

Dear Sir:

I thoroughly enjoyed your article "Notes on a Computer Score: Part 2 the TI-99 4 Assists Gifted Children in the Learning Process." It gives me a feeling of satisfaction to see that kids are excited about learning through the use of computers.

Our family got a TI-99/4A for Christmas last year. I love the "Music Maker" Command Module. Being a pianist, I like to experiment with musical patterns and harmonies. I can compose music easily, without having the mind of Mozart. My piano teacher found the TI concept for teaching, a great asset. " . . . It makes learning fun."

I wish a computer music class could be available in every school as part of the regular curriculum. It would motivate high school students to learn the basics in computing.

I, personally, am considering pursuing a career in Computer Science.

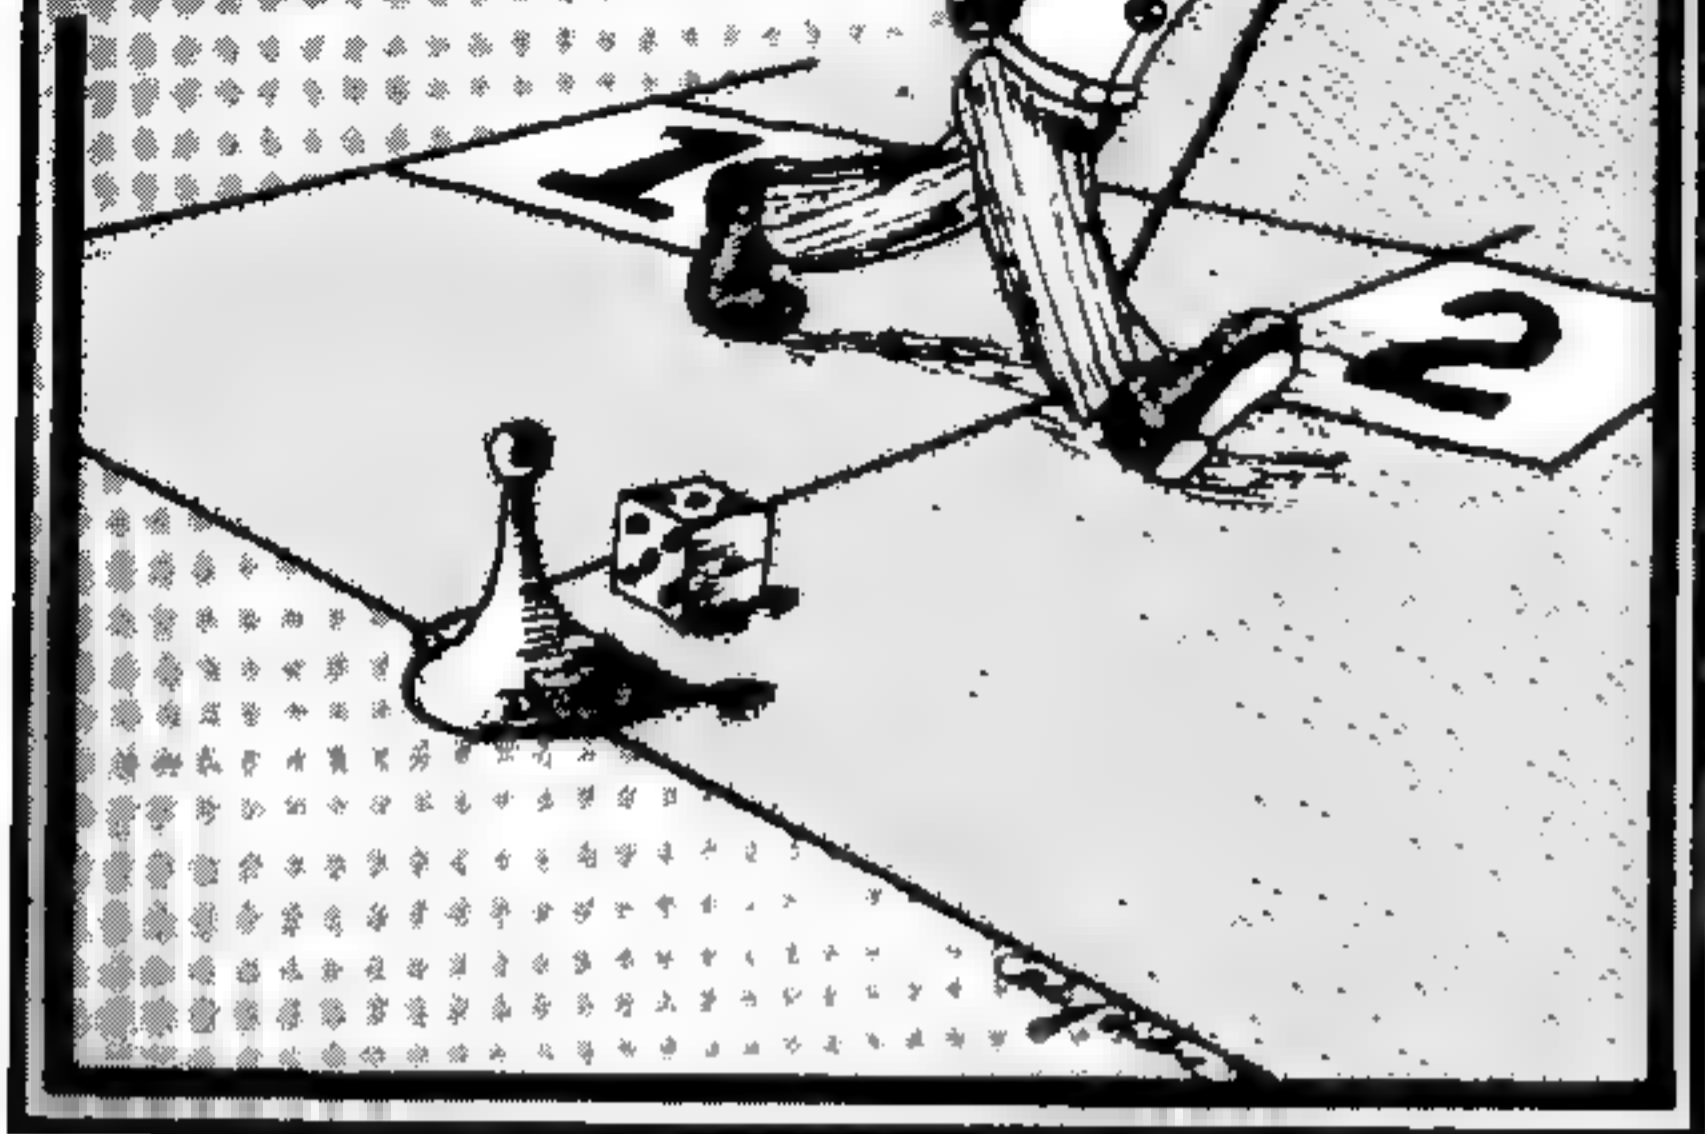

Being relatively new to computers and anxious to understand new concepts—I find the 99'er Magazine a real help. Thanks for the great job.

Natalie Adams
Chesterland, OH

Natalie, you have made an interesting observation—one that many might not immediately comprehend. With CAI, students learn not only the target subject matter, but also the basics of computing. And so, our society advances into the new era.

99'er

STARTING FROM SQUARE ONE

Oh No!

MEMORY FULL

By Regena

Suddenly, I was surrounded by sleepy-eyed household members asking what had happened. Forced back to the reality of my surroundings, I realized I had loudly proclaimed my frustration at the message on the screen. The clock showed midnight. Yielding to the needs of others—not to mention my own fatigue—off to bed I went. As I lay there, visions of memory conservation danced in my head. . .

One of the big challenges of writing programs is to stay within the memory capacity of the computer. A large program may not run with the disk controller or other peripherals connected. You'll recognize this situation if while **RUN**ing a program, you hear a horrible "BEEP" and see the **MEMORY FULL IN . . .** message. The following programming hints will help you to conserve memory.

REMark statements

REMark statements are valuable while you are developing your program; they keep track of what each section is doing. REMs are also great for others who read your program listing. However, each REM takes up valuable memory—one byte per character plus each digit of the line number. Deleting REMs is the easiest and perhaps first step to reduce the program size.

By the way, when you write a program, avoid **GOTO** and **GOSUB** to a REM. Then if you must delete a REM, you won't need to search for all the places where that line number is referenced.

DIMension wisely

Remember that subscripts start with zero unless you use **OPTION BASE 1**. If you do not use a **DIMension** statement, TI BASIC automatically reserves eleven elements in each dimension, for example **A(10,10,10)**. If you are using up to **A(9, 9, 9)** or **A(10, 10, 10)**, it isn't necessary to use:

```
100 DIM A(10, 10, 10)
```

which takes up 20 bytes. However, if you are running close to full memory

and only need **A(6)**, then use:

```
100 DIM A(6)
```

For higher numbers only, **DIMension** to the subscript you need. For example, if you have a program for a class of 32 students, use:

```
100 DIM S(31)
```

rather than arbitrarily using:

```
100 DIM S(40)
```

When you **RUN** the program—even if you don't fill those extra elements—you reserve eight bytes per subscript. Strings don't reserve as much—the element is null until actually filled. Your **DIM** of a string, when **RUN**, uses 8 bytes plus 2 times each subscript.

Stack Several PRINT Statements

Remember, each separate line number uses more memory. By using colons and spaces, you may print several lines using only one **PRINT** statement. The colon means "Go to the next screen line," and you may have as many colons as you need.

Keep in mind that a screen line has 28 positions, and you may use spaces appropriately (in quotations) to print several screen lines. The maximum length of a statement is 112 characters including the line number. Examples are:

113 bytes:

```
300 PRINT
310 PRINT
320 PRINT "THIS STATEMENT
    SHOWS AN"
330 PRINT "EXAMPLE OF HOW TO
    COMBINE"
340 PRINT "SEVERAL LINES OF
    PRINT."
```

87 bytes:

```
300 PRINT : "THIS STATEMENT
    SHOWS AN": "EXAMPLE OF
    HOW TO COMBINE SEVERAL
    LINES OF PRINT."
```

GOSUB

Check through your listing and note any repetitious code or sequences of similar statements. Consider using a subroutine and **GOSUB** for commonly

used program segments. For example, if throughout the program you use the pressing of **ENTER** to continue after instructions, you may use this subroutine:

```
200 PRINT "PRESS ENTER TO
    CONTINUE"
210 CALL KEY(O,K,S)
220 IF K <> 13 THEN 210
230 RETURN
```

Each place you need this procedure, use **GOSUB 200**.

You may have a longer procedure with a few variables needing definition before calling the subroutine. For instance, suppose you are drawing two wheels on a car and a man's head—all circles. Specify the necessary coordinates (only those changed since the last use) then **GOSUB** (300 in this example) to the subroutine that draws the circle:

```
300 REM Circle Subroutine
    :
400 RETURN
500 X=20
510 Y=5
520 GOSUB 300
530 Y=12
540 GOSUB 300
550 X=4
560 Y=20
570 GOSUB 300
```

Limit Variables

Ordinarily you will want to give your variables meaningful names. If memory is a problem, you may have to give up clarity to get your program to run. Longer names take up more memory.

For each independent loop counter, you may use the same variable name. Rather than using **FOR MON=1 TO 12**, **FOR NAME=1 TO 32**, **FOR COUNT=1 TO 5**, **FOR DELAY=1 TO 500**—use one short name: **FOR I=1 TO 12**, **FOR I=1 TO 32**, etc.

Use DATA and READ Statements

If you have more than eight statements in a row that are doing the same process, you may use a **DATA** routine instead, making the **DATA**

statements as long as possible. I say eight because depending on the data, it takes seven or eight statements for the DATA routine. For an illustration here, the usual way to define graphics characters is:

```
400 CALL CHAR(100,"FFFE7C3C3E7FFF")
410 CALL CHAR(101,"F8F8")
420 CALL CHAR(102,"FF00FF") etc.
```

If you have a large number of characters to define, the procedure can be changed to:

```
400 RESTORE 450
410 FOR I=1 TO 10
420 READ C,C$
430 CALL CHAR(C,C$)
440 NEXT I
450 DATA 100,FFFE7C3C3E7FFF,
101,F8F8,102,FF00FF, etc.
```

To conserve even more, if the character numbers are in consecutive order, use the loop counter instead of READING C. For example, CALL CHAR(99+I,C\$). Note also that a string variable in a DATA statement does not need quotation marks unless you want leading or trailing spaces. Deleting quotation marks does not decrease the memory, but it does reduce space, so you may fit more on a DATA statement line.

You may use DATA for CALL SOUND statements (READ in any of the parameters that change with each statement), CALL HCHAR, CALL VCHAR (READ x-coordinate, y-coordinate, character number, and repetitions) or with any statements that use numbers or strings that can be READ from DATA. A disadvantage of using DATA statements is that it is harder to figure out what a program is doing.

Remember to take advantage of TI's RESTORE, which allows the DATA statements (which may be placed anywhere) to be selected, read and re-read.

"Scrunch" DATA

Perhaps the best way to explain this is with an example. Suppose you have a football statistics program. One DATA statement includes the player's name and the number of pass interceptions per game for ten games. A dash means he did not play, and an asterisk indicates he was injured. The program segment is:

```
200 READ LAST$, FIRST$
210 FOR I=1 TO 10
220 READ PI$
:
260 NEXT I
```

with the accompanying DATA for one player:

```
300 DATA DOE,JOHN,-,0,1,3,0,0,
2,3,*,3
```

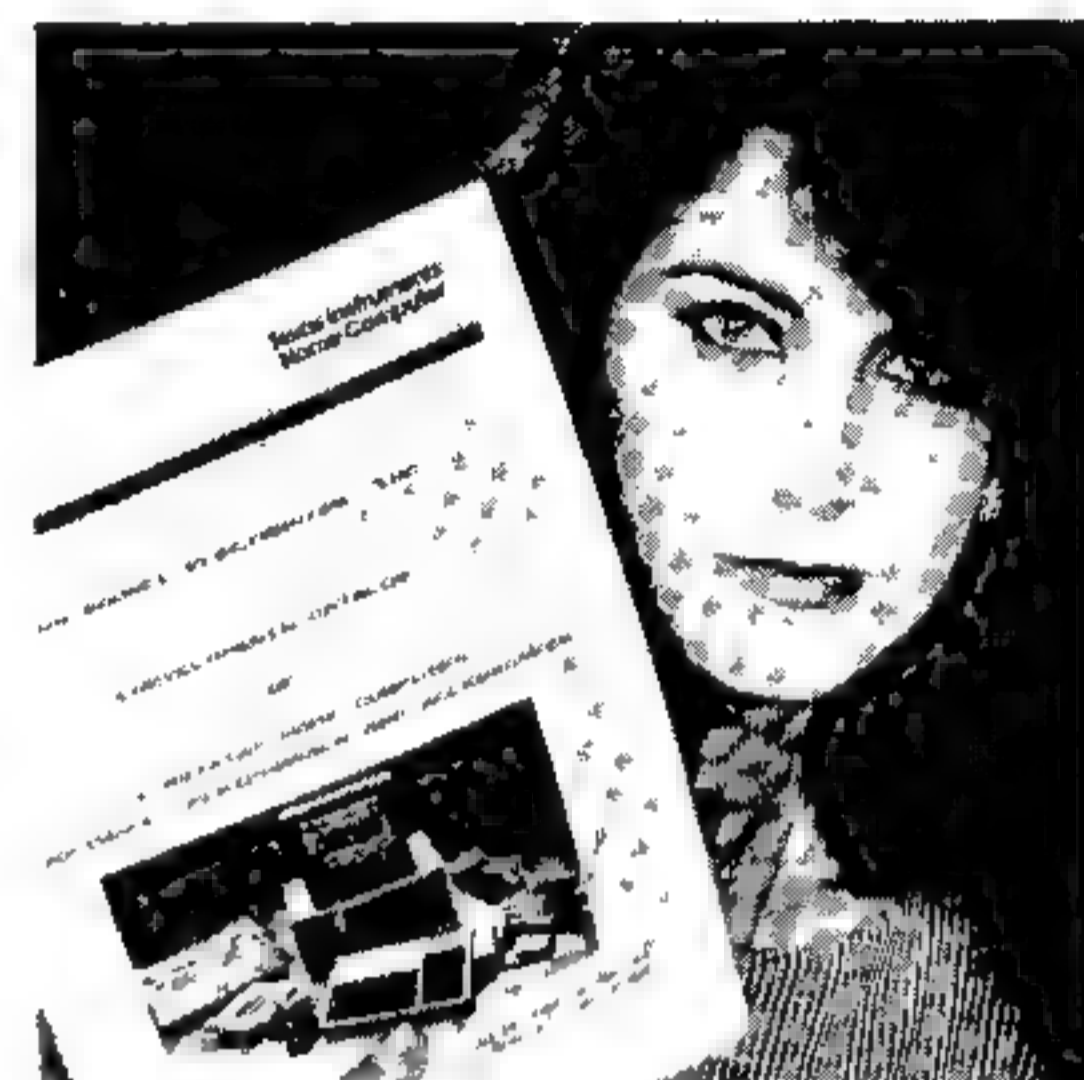

This DATA statement uses 59 bytes. The bytes may be reduced by leaving out the zeros. This is especially helpful if a DATA statement has a lot of zeros (some of the players intercepted very few passes). Deleting the zero indicates a null string, and the logic in the program would have to include an IF statement to change the

UNISOURCE

Your one source for all software and peripherals. Here are four good reasons why...

1 Encyclopedia/Catalog— Hot off the press! All TI software. All TI peripherals. Hundreds of third party software packages and accessories. You can order virtually anything you need for your TI-99/4A using the *TI Home Computer Encyclopedia/Catalog* from Unisource Electronics. Only \$6, refundable with your first order. And, you'll automatically get future updates. Order it today... from Unisource.

2 Price—We know you shop around before you buy, and we know price is important. You can be assured of a competitive price from Unisource. Ask about our discount program that applies to everything we sell—no minimum order. You can order using our toll free phone number, and there's no additional charge when you use MasterCard or Visa.

3 Special Mail Offers—Extra-special offers are often made available to those on our mailing list. All you have to do to be included is call our toll free line and give us your name and address. It's as simple as that. Call today! Unless you're a past customer (and already on our list) you've missed several extra-specials already.

4 Availability—Unisource Electronics is located only 3 miles from the TI warehouse in Lubbock, Texas. That's important in today's environment of limited supply on hot new products.

Simplify your shopping. Go with the one source that has it all—Unisource Electronics. And, order your copy of the *TI Home Computer Encyclopedia/Catalog* today. Just call us on our toll free hot line...

1-800-858-4580

(In Texas call 1-806-745-8835)

...and give us your name, address, Visa or MasterCard number, and we'll charge the \$6.00 plus \$1.50 shipping and handling to your account. Texas residents add 5% sales tax. For mail-in orders, send to P.O. Box 64240, Lubbock, Texas 79464.

Unisource Electronics, Inc.

Excerpts from the

99'ER DIGEST™

of news & happenings in
the Home Computer world

TI OPTS FOR REBATE EXTENSION

The Digest has just learned that the TI Rebate/Free Speech offer has been extended until April 15, 1983—a marketing move based on the premise that giving away \$100 checks and free accessory products is presently the most effective strategy for maintaining TI's lead in retail sales.

GUNS OF NAVARONE FIRE ASSEMBLER TOOL OUT TEXAS WAY

A TI spokesman has just announced the purchase of "Super Bugger" from Navarone Industries of Sunnvale, California. The software consists of an interactive Assembly Language Debugger allowing single-step trace, and advanced program development using a bit-mapped screen, disassembler, and memory dump utility. The product will be disk-based. Future price and availability to be announced. The purchase is significant in that it demonstrates TI support of third-party software development by providing the suitable tools.

MULTIPLAN GETS READY TO SPREAD ITS WINGS

The remaining bug in Microsoft's implementation of Multiplan (a sophisticated spread sheet tool) for the Home Computer has been fixed by the program's authors. The release of the software to TI's Semiconductor Group for chip manufacture—needed for the master Command Cartridge—signifies another marketing coup for TI: As was accomplished with the p-system, the lowest cost hardware/software implementation of a popular micro product has found a strategic place in the Texas stable. Users demanded a "Visicalc," and Lubbock is providing it—only better and cheaper.

MULTI-LEVEL MARKETING IS MUSHROOMING

October's 99'er TI-Fest in San Francisco provided the birthing place for a brand new multi-level marketing plan for the TI Home Computer. Scotch Marketing, Inc. (Springfield, MO) signed up several hundred new dealers at the show. Tronics Sales Corporation, the original multi-level Home Computer distributor, was also represented at the show through the recruiting efforts of another exhibitor, the San Francisco-based Personal Computer Association.

THE TI-CDC PLATO RELATIONSHIP IS NO LONGER ALL GREEK

A series of Control Data Corporation (CDC) ads have recently been promoting their Plato courseware for three popular microcomputers, the TI-99/4A included. Under an agreement with CDC, TI took the "pick of the litter"—the 500+ programs (organized as 108 software packages) in Basic Skills and High School Skills that have the most impact for home and educational institutions. CDC gets to market the rest to TI users directly. The Plato implementation on the TI machine is the most comprehensive set of CAI ever done on a micro. A student who successfully completes the High School Skills courseware is supposed to be able to pass a high school GED test.

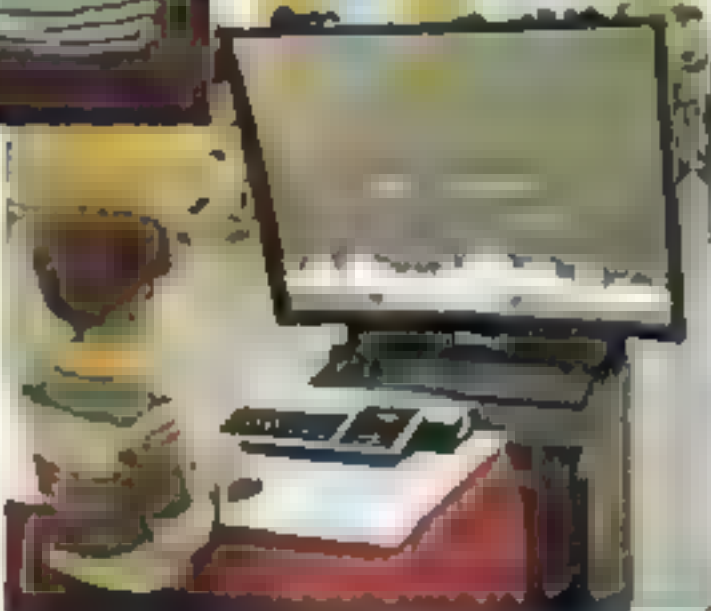

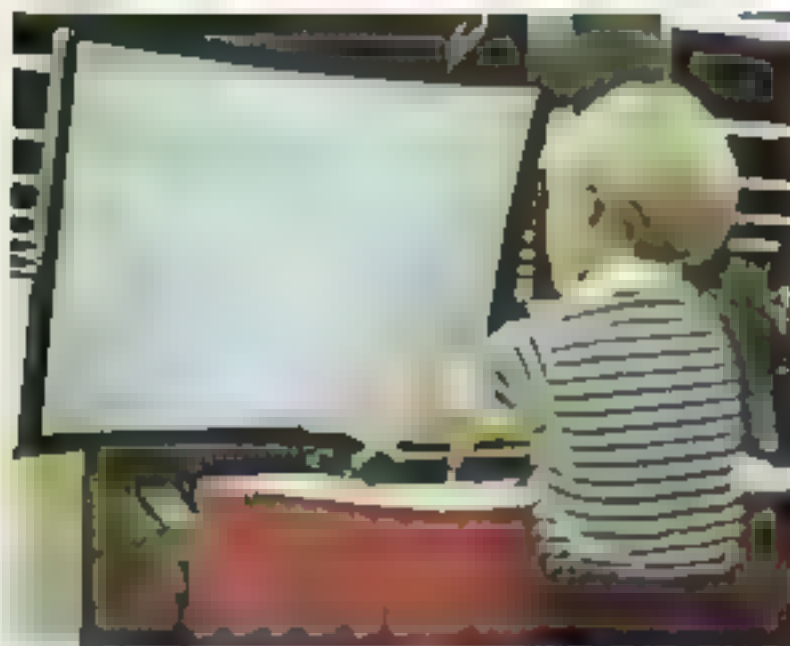

TI FORTH TO USHER IN THIRD WAVE OF HOME COMPUTER SOFTWARE

Third party software producers and serious programmers will get a new development language when TI Forth becomes available for shipping in presumably the late Forth quarter. The language features and applications were demonstrated at the heavily attended TI-Fest Forth seminar. The TI implementation includes an extra 64-column bit mapped editor, a provision for HI-RES dot graphics, and simple control of Interrupt Service Routines (ISRs) that govern "simultaneous" processes—a feature that should find use in games, music and applications like print spooling.

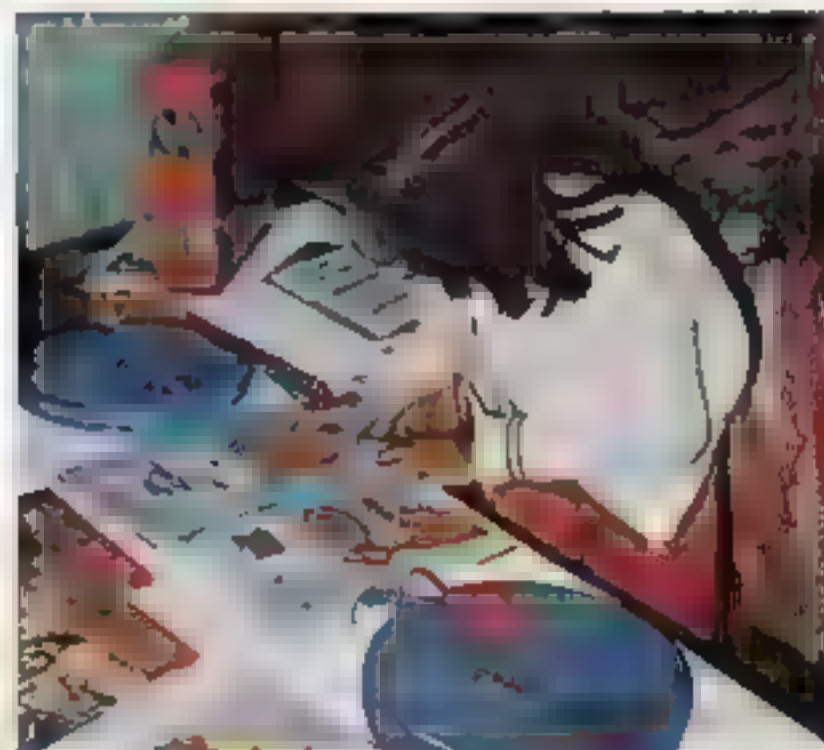

99'er Digest is a marketing information service for retailers, distributors, third-party vendors, sales representatives, industry analysts, and other TI-watchers interested in the home computing, personal computing, and portable computing markets in which Texas Instruments is present. The publication is issued biweekly and mailed First Class. Appropriate items of consumer interest are excerpted from the Digest in the monthly 99'er Magazine. For subscription details contact: Emerald Valley Publishing Co., 1500 Valley River Drive, Suite 250, Eugene, OR 97401.

99'er Digest is a trademark of Emerald Valley Publishing Co.

99'er TI-Fest: The Home Computer Show

It was an event that will be long remembered among the Texas Instruments Home Computer users, future users, and interested observers who attended. Three fun-filled and informative days (October 22-24) in the City by the Bay. Perfect weather, great food, and a unique hands-on opportunity for the nearly 18,000 showgoers to try all the latest TI hardware, software, and electronic learning aids, plus examine the compatible wares and services from the many innovative third-party vendors who also exhibited. Then there were the seminars—nearly four dozen well-attended sessions that proved to be a learning and enrichment experience without equal for those people who took the time to listen, look, and marvel at some of the

applications and features of the versatile "little \$20 machine." Additionally, there was an in-depth LOGO workshop, a chance to talk directly to knowledgeable TI employees and management, the opportunity to meet with other users from all over the world, and the fun of competing for prizes in some of the most exciting arcade games ever to grace a video screen. Hundreds of door prizes were also given away during the three-day event.

TI-Fest was truly a Home Computer Show—the first of its kind. People of all ages and interests attended. It was not the typical hobbyist or businessman's show; rather, it was an event that all members of the family could enjoy and learn from.

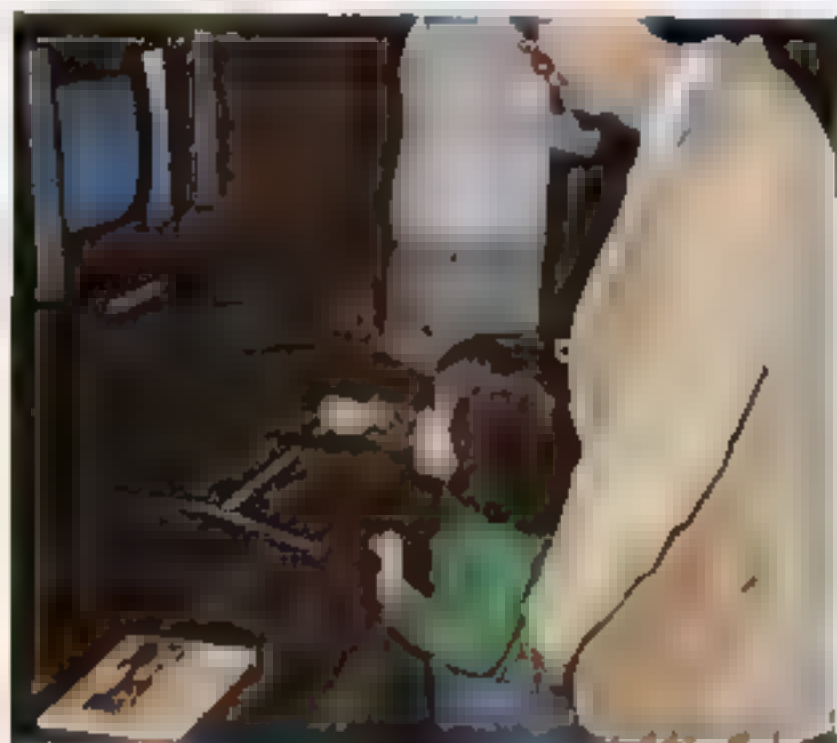

The unique floor layout and decor, as shown in these photos, emphasized the Disneyland-like separation of interests into Education Land, Computer Gaming Land, and 99-er Land (everything not specifically education or gaming). The nearly 200 Home Computer systems residing on large octagonal islands scattered throughout the 60,000 square feet of exhibit area projected a feeling of user-friendliness and invited hands-on participation. Large-screen projection TVs dotted the floor, and vendor booths provided the natural boundaries between the three island groups.

The nearly 60 hours of well-attended seminars covered a diverse range of subjects including

beginning tutorials in six different Home Computer languages: music, interactive video, and computer-assisted instruction for the retarded, as well as game design, commercial software development, word processing, and automated bookkeeping accounting systems.

The vendors who exhibited at the show were selling a wide ranging collection of wares and services including game, educational, business, and home management software; modems, expansion boxes, joysticks, computer desks and printer stands, courses, posters, and commemorative mugs, double-sided disk drives, books and magazines, multi-level marketing plans and user group memberships, typewriter printers, cassette adapters and dust covers; and even some 16-bit T(I)-shirts.

We believe everyone should enjoy FREE SPEECH

especially during the Texas Instruments
Home Computer Free Solid State Speech™
Synthesizer offer.

Now you can add the amazing dimension of computer speech to your TI Home Computer. The kids will love it, especially those too young to read (it can help them *learn*). And the whole family will enjoy the pleasant, very distinct, very "human" voice produced by a TI-developed breakthrough technology called Solid State Speech™. You have to hear it to believe it. All you do is plug it in and you're ready to talk it up with any of TI's customized Command Cartridges that use speech (sold separately). Here's how the offer works. If you buy any six Texas Instruments Solid State Software™ Command Cartridges or two Texas Instruments Software Albums (up to three command cartridges in a convenient storage package) between September 1, 1982 and January 31, 1983, we'll send you the remarkable Solid State Speech™ Synthesizer free. Its suggested retail price is \$149.95. Talk about a good deal!

"Talk about a
good deal!"

Texas Instruments Free Speech Synthesizer Offer

When you buy either six Solid State Software™ Command Cartridges or two software albums for the TI-99/4A Home Computer, you will receive FREE the Solid State Speech™ Synthesizer, a \$49.95 value. Offer is good September 1, 1982 through January 31, 1983. Coupons and proof of purchase must be received by February 15, 1983.

To receive your free Speech Synthesizer, complete this coupon, enclose receipt(s) (no photo copies) and the end flaps with the number 1043601, return each Command Cartridge box.

Introduction

LOGO Times is an information resource for anyone interested in participating in the creation of their own *personal* language—one that will easily allow them to communicate with a computer in a totally new audiovisual realm of applied imagination, exploration, and self-discovery. The articles on these pages concern the use of the new TI LOGO language, but readers, however, do *not* need any additional software or equipment (or even a computer) to understand and learn from the material presented here.

If readers want to actually *experience* a TI LOGO environment, they will need either a TI-99/4 or TI-99/4A computer, the Expansion Memory peripheral, and the TI LOGO Command Module. A disk drive, although convenient to have, is *not* required; a user's work may alternately be saved on cassette tape, printed out on the TI Thermal Printer, or hand copied into a notebook (for later re-keyboarding).

In each issue, one or more of the articles may reference or build upon the topics discussed in a previous article. It is therefore recommended that for maximum benefit and understanding, new readers obtain the appropriate back issues of *99'er Magazine* in which the *LOGO Times* articles are contained.

Notice

LOGO Times is actively soliciting articles. Manuscripts should be typed double-spaced, and accompanied by a cassette tape or disk if containing any lengthy procedures or graphics.

Send all materials to:

LOGO Times Editorial Dept.
99'er Magazine
1500 Valley River Dr., Suite 250
Eugene, OR 97401

All mail directed to the Letters-to-the Editor column (*Letters on LOGO*) will be published in accordance with the conditions set forth on *99'er Magazine's* Masthead page.

The Turtle Arcade:

By Henry Gorman
Contributing Editor

Creating computer games in LOGO is simple and straightforward. You can come up with great games and video shows using the LOGO statements you already know, plus a few new simple tricks.

Animation and Animated Stories

The trick to making animated characters in LOGO is to take advantage of the same illusion that has given us the motion picture. If a series of pictures, each slightly different, is flashed before your eyes you see them as continuous movement—what is known as the Phi phenomenon. You can do it with LOGO by making a sprite carry first one shape then a slightly different one—the quick succession of shapes creating movement.

The motion seems continuous if the sprite rapidly alternates shape (such as the flying bird in the TI LOGO manual) or if the sprite carries successively different shapes. For cartoons with repeated motions (a stick figure walking or a Munchman munching) a sprite should alternate between two or three shapes. But remember, the shape numbers and sprite numbers are *not* the same; a sprite carrying shape 6, is not sprite 6. If you are hit with that bug, you end up with funny-looking and very uneconomical animation.

A LOGO Movie

To animate a series of events, just time the appearance of shapes in the positions you desire. For example, one of my younger students (a third grader) wanted to make a "movie" of a plane flying across the screen and dropping a bomb to blow up a bridge.

He let one sprite carry the plane and a second one carry the bomb. Because he made the bomb smaller than the plane, with both sprites moving together (i.e., same XCOR, YCOR, heading, and speed), and because the bomb sprite had a higher number than the plane sprite, the bomb was not visible.

In his movie program, he scheduled a suitable waiting period and then changed the heading and speed of the sprite carrying the bomb so that the bomb appeared to fall. Also, he scheduled a suitable waiting period so that when the plane reached the edge of the screen after dropping the bomb, the plane was colored clear. Again he put a suitable waiting period into his program (which he determined, by trial-and-error) so that the bomb reached its target. The bridge was made up of four different shapes carried by six sprites. Finally, the bomb sprite and bridge-sprites dropped those shapes (i.e., bomb and bridge) and carried exploding shrapnel shapes, colored red. His concept was fairly simple although calculating the correct waiting times was difficult.

The right waiting times can change depending on differences between computers and the amount of memory already filled. These bugs can be taken out with coincidence checks, discussed in a later section of this article.

Beware, The Endless Movie

When you want to animate, you have to be careful where you use recursion. For example, suppose you wanted a movie combining the tree-seasons program of the TI-LOGO manual with the flying bird program. Of course the sprites used for the trees could not also be used for the bird; neither could you show more than four sprites on a horizontal line. If you structure the programs:

```
TO MOVIE
  SETUP
  FLY
  SEASON
  END
```

The computer never finishes FLY because FLY is recursive and does not have a stop rule. And if you put SEASON before FLY, the computer never finishes SEASON because SEASON also is recursive with no stop rule.

If you change FLY and SEASON so that they are not recursive and place them together into a recursive program:

```
TO MOVIE
  SETUP
  OVER
  END

TO OVER
  SEASON
  FLY
  OVER
  END
```

Movies & Games in LOGO

Your bird will flap only once with each change of season! Breaking the program into recursive and non-recursive sub-programs is often a useful technique, but here it has created a terrible bug. A solution to the bug would be (a) write a non-recursive FLY program, and (b) replace the WAIT commands in SEASON with:

REPEAT 50 [FLY]

Now, the replacement line serves the twin functions of keeping time between seasons and of causing animation when desired.

PRINT and TYPE

Some computer projects use written instructions, provide feedback (or scores), or require movie captions. These projects all need PRINT and/or TYPE commands. Both commands remove the outermost set of brackets from embedded lists—i.e., PRINT [[HELLO] [THERE]] prints [HELLO] [THERE].

After a PRINT command, the cursor performs a *carriage return* and starts a fresh line; after a TYPE command, the cursor simply remains one space past the last printed character. TYPE commands are preferable for messages using variable answers such as "YOUR SCORE IS 6." The sample message could be printed with TYPE [YOUR SCORE IS] PRINT :SCORE.

To get a space between TYPED messages or between a TYPED message and a PRINTed message, you can either write PC 32 between the two commands, or put a space command between them such as:

```
TO SPACE
PC 32
END
```

Interactive Games

Some projects require the user to think of answers, to make selections, or to respond to game plays. There are two ways to accomplish this interaction—through READCHAR (RC) or READLINE (RL). These two operations have some important differences. When READLINE is executed (either in a LOGO program or at command level), it prints a ">" character in lieu of the "?" prompt and waits until the ENTER key is pressed.

Any characters typed before ENTER is pressed become a list (and internally the computer places brackets [] around them). Thus "A — READLINE followed by a typed A and ENTER will produce

SPECIFICATIONS

Data Format: Serial, binary, asynchronous
 Operate Mode: Manual dial, Automatic ANSW/ORIG selection
 Data Rate: 0 to 300 bps, full duplex
 Modulation: Frequency shift-keyed (FSK)
 Line Interface: Direct-connect
 Data Interface: TI RS-232C compatible, built-in cable to computer

Transmit Frequency: MARK SPACE
 ORIG 1270 Hz
 SPACE 1070 Hz
 ANSW 2225 Hz
 2025 Hz
 Transmit Frequency Accuracy: $\pm 0.04\%$

Transmit Level: -12 dBm typical
 Receive Frequency: MARK SPACE
 ORIG 2225 Hz
 SPACE 2025 Hz
 ANSW 1270 Hz
 1070 Hz
 Receive Frequency Tolerance: $\pm 0.5\%$
 Carrier Detect Threshold: -44 dBm typical
 Carrier Detect Indicator: Audible tone
 Power Requirement: Internal 9V transistor battery* or 110 VAC through adapter*
 Size: 8 1/4" x 4 3/8" x 1 3/8"
 *Not included

Meet the direct-connect SIGNALMAN MARK II designed for use with your TI 99/4A Accessories interface. The smallest, lightest most compact modem available today. Its long life 9-volt internal battery and exclusive audible Carrier Detect Signal allow you to install the SIGNALMAN anywhere, out of the way, and out of sight! Now, there's no need for messy cables, and no need to look at a LED to verify carrier.

Anchor Automation has taken the fuss out of communications. For business or fun, SIGNALMAN is the ideal modem.

This unit interfaces between the receiver and handpiece of standard Bell modular phones. Phones with dials in the handpiece or without a modular cord between the receiver and handpiece or without a modular cord between the handpiece and receiver, will require an optional adapter.

Comes complete with cable and cord. This is a unit specially designed for the TI-99/4A and should not be confused with other Anchor/Signalman models that sell for less and/or are not compatible with the TI-99/4A.

Your SIGNALMAN transmits both voice and data over all common telephone lines, and is fully compatible with Bell 103 modems — putting your computer in instant communications with thousands of other computers. And when you're in the data position, your SIGNALMAN automatically changes from ORIGINATE to ANSWER and back again as the need arises — ending all that confusion.

Proudly Introduces The SIGNALMANTM MARK III TI 99/4A COMPATIBLE MODEM

Finally, a low cost, direct connect, high quality and super reliable TI-99/4 and 99/4A compatible modem that comes complete and ready to use — just plug it into a TI RS/232 interface or expansion card.

Turtle Arcade... from p.33

FALSE, but [A] = READLINE under the same circumstances will yield TRUE. The fact that READLINE can take more than one typed character as input (which READCHAR cannot) is especially useful for commands requiring list input (e.g., EACH and RUN).

A major disadvantage of READLINE is that you must press ENTER each time READLINE is used. READCHAR also makes the computer wait for a keyboard response; unlike READLINE there is no special prompt symbol; as soon as a key is typed, that key is input as a word without showing on the monitor.

With both READCHAR and READLINE the input information is lost after it is used once—unless assigned a name as in:

```
CALL READLINE "ANSWER
or
MAKE "ANSWER READLINE
```

An obvious problem can arise with these two commands: When a program executes either command, it does not continue until it receives the appropriate keyboard response. What if the game player wishes *not* to respond? To avoid this, you can use RC?; it outputs TRUE when a key is typed and FALSE otherwise. Put this together with TEST for:

```
TEST RC?
IFT someaction
IFF someotheraction
```

The above code has one potential bug: whenever RC? becomes TRUE, it remains TRUE until the information in RC is assigned a name. To cure the bug use:

```
TEST RC?
IFT CALL, RC ANSWER someaction
IFF someotheraction
```

Watching Where You're Going

When people compose LOGO games, they often stumble onto bugs in the *flow of control*. Flow of control merely denotes the order of lines in a program. Ordinarily, control flows linearly from the first line to the last; it can branch with the use of IF conditionals, (IFT and IFF statements).

The great potential of LOGO as a procedural language admits to some control problems if you do not watch your step. To keep track of the flow of control, I anthropomorphize the computer and think of programs as controlled by "little men" who (a) may run only one program, (b) must stop when they reach END, STOP, or OUTPUT, and (c) literally do what they are told to do. Then I can follow control by sketching in the stick figures and watching when programs are assigned.

Coincidence Checks

Earlier I alluded to problems of time delays in LOGO movies with interacting sprites. In games, you often want some visual effect to occur only when a sprite is at or near some target. For both cases,

use LOGO logic to run coincidence checks. In some games these coincidence checks are needed frequently, if only in restricted circumstances.

Because each coincidence check takes time, an economical program would run the checks only when they might be positive and only when a positive matters. For example, in an earlier article I developed a PONG-type game. In the game, the position of the ball relative to a paddle is immaterial when the ball is moving away from the paddle, so the coincidence checks should be performed only when the sprite carrying the ball is heading toward the paddle.

To make coincidence checks less time-consuming, those checks which use both an X and Y position can be divided:

```
TO CHECK
TEST XCOR = :XTARGET
IFT OUTPUT YCHECK
END
TO YCHECK
OUTPUT YCOR = :YTARGET
END
```

With split checks, the order of checking X and Y positions should be arranged so that the least likely coincidence is examined first.

An important consideration in some games is that the sprite of interest in a coincidence check may be moving very fast. Such circumstances hold two im-

Mailing List... from p.11

Once you have added a new name, be prepared for a shock. The screen suddenly announces "SORTING." I must confess, it almost gave me apoplexy, having been preconditioned to SORTING on the TI Mailing List program. When the latter used to say SORTING, it meant it—and you couldn't use your computer for the next quarter hour. But don't despair; when this one threatens to sort, it is only a fast, and I mean *fast*, CALL to subprogram SORT in assembly language. In a couple of seconds the attractive boxes are right back, inviting you to enter some more names.

Print Only What You Want

The next option I suggest is SELECT TO PRINT. It will prepare your file for printing by pre-sorting according to any criteria you desire: last name, Zip code, the maiden name of your grandmother (just kidding, Charles)—in short any of the *fields*, as the people in the business would say. Now, this program *must* be done *before* you select the PRINT LABELS/LISTS program. It puts the correct pointers in place, such that you can print your labels or reports in the desired order. Sorting by Zip code, for example, takes a little more time than the usual sorting by last name, because the former is a diskette sort. It sorts at a rate of 32 names per minute, and you are informed of its progress at all times by a convenient message on the screen saying "PROCESSING RECORD #xxxx." By the way, you may have up to 500 names on one diskette with this mailing list program, opposed to 350 in the TI Mailing List.

Now comes the PRINT LABELS/LISTS program. It asks if you want labels or a name list, how many blank lines between labels, the print density, and whether you want all the names at once or if you want them individually displayed for your approval. Print speed will depend on the particular printer you are using and on the Baud rate.

For example, using an Epson MX-80 at 9600 Baud, this program will print about 8 labels per minute in any choice from 1 through 4-up.

Finding Names You Can't Quite Remember

Another selection is the SEARCH/DISPLAY program. You are allowed to enter a part of a name (remember Zbigniew Moraszewski?) and the program will search for all possible matches. So, in the case of good old Zbiggy, all you have to enter is "Mora" and the program will do the rest. This is particularly handy for me. I am the editor of a TI-59 newsletter, and on any given day, 30 out of 4000 members will call and ask if I can send them a specific copy, article, program, or what have you. I used to ask the caller for a name and address, and I took notes. Then at the end of the day I would spend another hour and a half typing out mailing labels. Not anymore.

I just ask the caller for a name, type the beginning letters of it and, while we are talking, the first match appears on the screen. It usually takes no more than two tries to find the correct name and address. Now the program asks if I want it printed on the MX-80 I keep loaded with mailing labels. At my "Yes," I get a faultless label out of the machine. This feature alone has given me back an hour and a half of much-needed sleep per night. Assuming your computer is loaded already with this program (mine is 12 hours a day), it takes five seconds to find a name and another five to print the address on a label.

Writing "Personal" Letters

This is not all the Mailing List programs can do—not by a long shot. Another feature is the WORD PROCESS INTERFACE. Using a separate word processor program from Futura Software, you can put in special access codes for writing letters. Then, by means of this word processor interface program, you are able to put names and addresses

Hello fellow 99'ers,

November 3, 1982

Instead of our normal advertisement, I believe it is more important to explain our situation here at Denali Data Design. In twenty months, we grew from a coffee table into several offices. The last 3 months have seen us more than triple our in house staff, lease automated equipment, and farm out piece work in order to continue to fill your orders. Although this increase of business is greatly appreciated, we must admit it took a toll on our new product development.

DENALI DATA DESIGN
1413 N. McKinley Avenue
Oklahoma City, OK 73106
(405) 524-7764
(800) 654-8499

Witnessed: H.A. "Red" Boucher

Let it henceforth be known that
PETER COOKMAN
SOURCE SOURDOUGH TCW994

is hereby enrolled in
**THE ORDER OF THE
HONORARY ALASKA SOURDOUGH**

indicating said person is of sufficiently hardy stock to perform the traditional Sourdough feats of wrestling a Kodiak bear, climbing Mt. McKinley, and swimming the Yukon River.

To those who are waiting for us to release our long announced new products (JOYPAD™, BLACKBOOK 2, TIMEBOOK, etc.), we appreciate your patience. I'm sure your patience has also been appreciated by new users, who finally found a cassette cable, and those others who found themselves with boxes of high technology, but lacking only a few strands of copper to make them work together, along with those whose new wave joysticks required adapting to be used with the game ports.

We are now ready to meet market demands and release new products — plus more!

Thank you for your orders and your patience!

Sincerely,
Peter H. Cookman
President

Authorized By
Jay S. Hammond, Governor

into marked spots in the letters—automatically. Neat, huh? You can create letters such as:

"Dear Mr. Jones, we at the TI PCC Notes are sad to find that your name doesn't appear on our 1982 subscription list. We would hate for you to miss a single issue. Therefore, Mr. Jones, we have included a subscription form with your name already printed in the right place. . ."

Of course, Mr. Watson, Mr. Morasczewski and Ms. Schmidt will receive the same "personal" letter. And if you run the letters on an electronic typewriter, each of these people will swear you wrote to them personally. Where in heaven would I find the time or the ambition, pray tell?

Insurance Against Shut-downs

Another sometimes handy option is the REBUILD NAME FILES program. If the: ADD/CHANGE/DELETE program is interrupted by an accidental glitch on the power line (forcing you to turn off the computer completely), it is possible that your name file pointers will be messed up. This program will pull that file from the crash and put you back in shape. All it takes is to load the program, insert your data diskette and let the program do its thing for about ten minutes.

The REORGANIZE FILES program is another highly useful addition. It allows you either to combine two files, or to split one file into several—for example, sorting the names from A to H on one diskette, from I to S on another, and from T to Z on still a third.

Finally (I always keep the *piece de resistance* for last, to savor it) there is a utility program called CONVERT

FROM TI LIST. Now, that one saved my life. Can you imagine re-typing 4000-plus names and expecting a no-error transfer? Impossible, you will say. Well, this program does it for you automatically, diskette to diskette, and initializes them for use in the new mailing list. You may also ask it to flash each name on the screen and let you decide, by means of a simple Y or N, if you want that one converted to the new list. I had a lot of garbage collected on the TI data diskettes—names not reachable through the Inquiry or the Search program which I called "untouchables." To my great relief, I got rid of the "untouchables" for good.

The transfer process in automatic mode takes about fifteen seconds per name. Manual mode, which lets you keep or delete a name, takes about twenty seconds per name. To type a name and address faultlessly would take at least a minute—and there is no such thing as "faultlessly." When I typed the names and addresses into the TI Mailing List, I averaged an error every thirty records. That's more than 130 errors among the 4000 names.

Last of all, every self-respecting menu should have an END OF JOB option. (Don't laugh, I have seen programs that made you press CONTROL CLEAR to get rid of them . . . otherwise, they would go in circles.) So, Option B lets you stop the works.

By now, you must have the impression I'm enthusiastic about this program—you bet I am!

Futura Mailing List—\$49.95. Available from: Ehninger Associates, Inc., P. O. Box 5581, Fort Worth, TX 76108.

77er

Turtle Arcade... from p.34

plications for coincidence checks. First, the check should "lead" the sprite (i.e., the check should take place a little ahead of the actual target) so that you avoid such implausibles as a ball bouncing off the middle of a paddle. Second, with a rapid-moving sprite, it might "sneak" through a target between coincidence checks. To avoid this, you can make your coincidence checks more lenient by setting up a range as with:

```
TO CHECK
TEST BOTH XCOR > (:XTARGET - 16) XCOR < (:XTARGET + 16)
IFT OUTPUT YCHECK
END
```

```
TO YCHECK
OUTPUT BOTH YCOR > (:YTARGET - 16) YCOR < (:YTARGET + 16)
END
```

For some games the target is moving. Because XCOR and YCOR only work for the current sprite, when you change which sprite you are addressing, you also change which sprite address you receive with XCOR and YCOR. Therefore, you must name and store (at least temporarily) the X and Y locations of the slower-moving sprite and then use these as your targets in checking coincidence:

```
TELL slowsprite
CALL XCOR "XTARGET"
CALL YCOR "YTARGET"
CHECK
```

```
TO CHECK
TELL fastsprite
```

I hope these ideas help you design a great new game for the Turtle Arcade!

Oh No!...from p.23

null string to a zero value. The reduced DATA statement is:

```
300 DATA DOE,JOHN,-,,1,3,,,2,3,*3
```

Each zero or other digit takes up three bytes. The statement now uses 50 bytes.

The DATA statement may be "scrunched" even further by removing all the commas between the numbers (put the zero values back in) and reading one string instead of ten:

```
300 DATA DOE,JOHN,-0130023*3
```

This DATA statement requires only 32 bytes.

The corresponding logic changes are:
Change 200 READ LAST\$,FIRST\$,INT\$

Change 220 PI\$=SEG\$(INT\$,1,1)

In this case the number of interceptions was always less than a two-digit number. If you have data that may vary in the length of the string, you may use some sort of delineator, perhaps # or a space. For example, in combining the last name and first name to get rid of the comma and 2 more bytes, we'll use a space between the names. The program segment becomes:

```
200 READ NAMES$,INT$
202 N=POS(NAMES$," ",1)
204 LAST$=SEG$(NAMES$,1,N-1)
206 FIRST$=SEG$(NAMES$,N+1,LEN(NAMES$)-N)
210 FOR I=1 TO 10
220 PI$=SEG$(INT$,1,1)
...
260 NEXT I
300 DATA DOE JOHN,-0130023*3
```

The original DATA statement of 59 bytes has been reduced to 30 bytes. You will also be able to fit more data in each DATA statement, so for a large number of players there will be a significant savings in memory.

Even though the manual says 112 characters are permitted in a statement, you may have noticed that a DATA

statement with lots of commas sometimes causes "LINE TOO LONG" at fewer than 100 characters. If you can combine data, you may avoid this problem.

Combine Strings

You may READ separate strings or calculate numbers and do what is needed with them as separate units, but if they are always associated, put items together in one string. For example, suppose you read in a last name then a first name in an alphabetical list, but later want to arrange the names numerically according to a score. You no longer need last name and first name, so they may be combined:

```
500 NAMES$=FIRST$&" "&LAST$
```

Don't GOTO

Look at the structure of your program. Perhaps draw arrows. If you have a GOTO 700, then from 700 have a few lines of programming then GOTO 2780, a few more lines, then GOTO 900, you should rearrange your program so it is executed in sequence. Every GOTO statement you can eliminate frees 10 bytes, besides making your program much more understandable.

Eliminate Unnecessary Statements

Quite often these statements occur during the editing process. Look through your listing for code that should have been deleted, statements that are never accessed, double GOTO statements, or other unnecessary statements. Examples are:

```
300 GOTO 1000
310 GOTO 1040
...
350 IF A=0 THEN 320 ELSE 360
360 GOTO 800
1000 GOTO 1050
```

Draw Efficiently

Look through the graphics statements and sketch your characters to see if you are drawing in the most

Richardson, TX 75080

efficient way. Use the repetition parameter wherever possible, even if some of the in between characters will be replaced. Besides usually saving memory, it is quicker. Here is a way to draw a line with alternating characters:

```
200 CALL HCHAR(5,1,42,31)
210 FOR Y=2 TO 30 STEP 2
220 CALL HCHAR(5,Y,46)
230 NEXT Y
```

Remember the repetitions will go to the next line if you want, so you may use one statement:

```
200 CALL HCHAR(8,1,54,128)
instead of three:
```

```
200 FOR I=8 TO 11
210 CALL HCHAR(1,1,65,32)
220 NEXT I
```

Reduce Logic

ON (numeric expression) GOTO...and ON (numeric expression) GOSUB...may save many lines of IF-THEN coding if you can get the numeric expression reduced to consecutive integer conditions.

One example is using the arrow keys on a split keyboard scan. The codes returned for pressing the arrows keys are:

```
5      2      3      0
```

We don't use return codes 1 and 4, and the sequence starts with zero. The codes 1 and 4 will be the second and fifth statement numbers for the sequence, and we want those key codes to return to the CALL KEY statement. Note that it is perfectly okay for some of the statement numbers to be the same after the GOTO or GOSUB. Before the ON n GOTO or ON n GOSUB statement, be sure to eliminate all other numbers greater than or smaller than the number of statement numbers specified. In CALL KEY(0,K1,S1), K1 starts out as

1. In this example, any other key pressed returns to statement 300.

```
300 CALL KEY(1,K1,S1)
```

```
310 IF (K1<0)+(K1>5) THEN 300
320 ON K1+1 GOTO 400,300,500,
    600,300,700
400 Procedure for down
500 Procedure for left
600 Procedure for right
700 Procedure for up
```

TI Extended BASIC

The maximum size of a TI Extended BASIC program is 864 bytes smaller than the maximum size of a TI BASIC program. However, there are more memory conserving tricks available in Extended BASIC. A big help is the SIZE command to determine how much memory space is free. This feature lets you experiment to see how much memory is taken up by various commands or procedures.

Stack Statements

More than one statement may be on a line, (up to 140 characters). Multiple statement lines not only save memory, but also speed the program execution. Multiple statements on a line must be separated by a double colon. Using this mark requires that multiple colons in a PRINT statement be separated by a space.

Define Four Characters at Once

Sketch and plan your graphics to take advantage of defining four characters with one statement, and using different magnification factors. A sprite with a magnification factor of 4 is actually made up of four characters and is double size, so you can have quite a large sprite just by specifying one character number in the CALL SPRITE statement. Economize with sprite commands. CALL MOTION, CALL SPRITE, and CALL PATTERN may specify more than one sprite at a time.

Think Through the Logic

Extended BASIC allows complex IF-THEN-ELSE statements, and you may use either statement numbers or commands. Map out your logic to take advantage of these capabilities with the fewest number of statements.

for a current list

Oh No!... from p.39

TI BASIC required several lines of code to line up a list of figures or print a list of names in straight columns. IMAGE and PRINT USING or DISPLAY USING require little effort to left-justify string variables and right-justify numbers.

Assign More Than One Item

You may assign more than one variable at a time, like in initialization.

100 T,A,B,C=1

assigns 1 to each variable T, A, B, and C using one statement instead of four.

Repeat

Use RPT\$ in string handling to repeat a string expression any number of times (up to a string of 255 characters). An example to define four striped graphics characters for two sprites is:

```
100 CALL CHAR(100,RPT$("00FF",
16))
110 CALL MAGNIFY(4)
120 CALL SPRITE(#1,100,7,20,100,
-5,5,#2,100,5,88,100,7,-4)
130 GOTO 30
```

Finally—Use Extended BASIC

Read through the list of available built-in subprograms. Some of them may be able to replace several lines of code. You may as well let the computer do the work, as well as use less memory.

DEBUGS ON DISPLAY

Screen Dump Utility

Try as we might, occasionally an error slips by the editorial desk. Two such errors were discovered in Super Language: A Screen Dump Utility—Part 2 in the November 1982 issue. The first error occurs on Page 19, Column 2 about one-third of the way down. In the description for setting up the PAB, Bytes 10-35 should read:

File Descriptor. We'll use
RS232.PA=N.DA=8.BA=9600.CR

The second error occurred on page 24, Column 2 under Mini-Memory Considerations. Step 5 should read as follows:

SUPPORT OUR
ADVERTISERS.

THEY TOO
MAKE THIS MAGAZINE
POSSIBLE...

5. Put the entry point for DUMP into the DEF/REF table by entering the following lines:

```
AORG > 7FEB (CR)
TEXT 'DUMP' (CR)
DATA > 7D14 (CR)
```

Note: There are 2 spaces required following the word DUMP in the above text directive for a total of 6 characters within the single quote marks.

အောင်မြင်မှု အောင်မြင်မှု

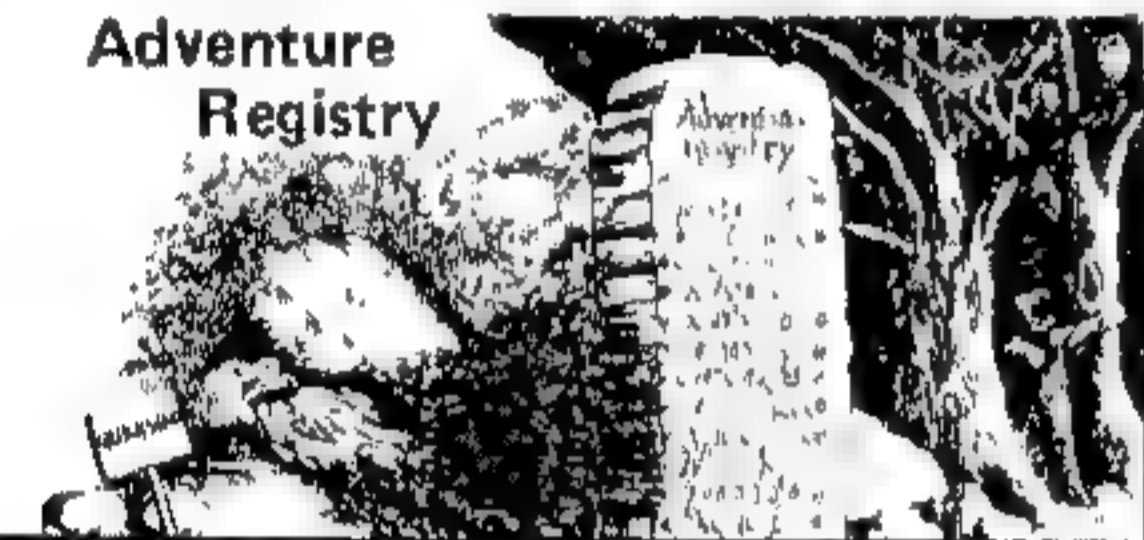

Computer Gaming is a magazine for all game lovers—players, designers, and programmers of microcomputer games. Regular features include product reviews, letters to the editor, player strategy, a question and answer forum, a Hall of Fame for high scorers, tutorial articles on game design and programming, plus interviews with professionals in the world of computer gaming.

All submissions for *Pros on Programming* are governed by the same conditions and payment rate as manuscripts sent to other departments of *99'er Magazine*. Materials submitted for the features shown below are treated the same for Copyright purposes as *Letters to the Editor* in *99'er Magazine* (as explained on the Masterhead page); if chosen for publication, the material (except for *99'er Hall of Fame*) will earn for its author a free computer game (either TI or third-party) and/or a one-year subscription to this magazine.

99'er Hall of Fame candidates with high scores in TI, third-party, or *Computer Gaming* games must completely describe the conditions under which their scores were achieved (i.e., skill level, keyboard or joystick use, screen number, partner participation, appearance of screen, etc.). Candidates may not be directly related to or affiliated with the programmer of the game or the publishing firm. No compensation will be provided to new inductees whose names are chosen to be immortalized—Fame is its own reward...

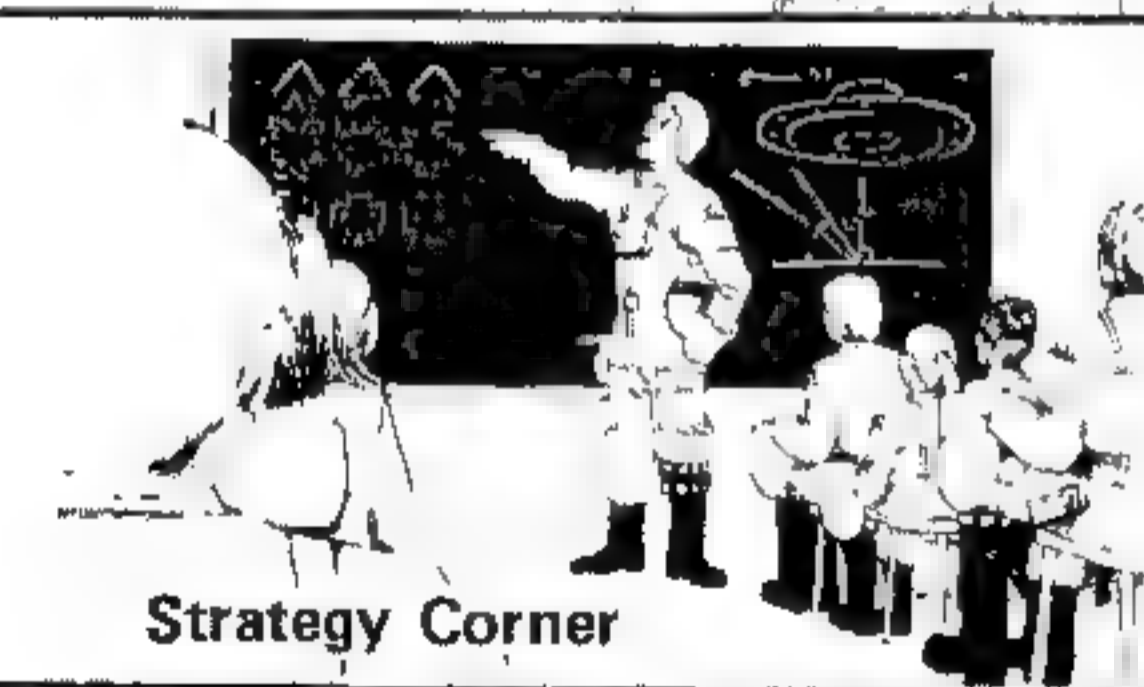

Adventure Registry

Joystick Jockey Q&A

Strategy Corner

Arcade Arbiter Review

99'er Hall of Fame

Ringwraith's Lair an Adventure type game for the TI 99/4A couldn't be easier to run. Just put the diskette in drive I and select Extended BASIC. The program loads automatically and then asks if instructions are needed. Answering YES, prints out the legend behind the scenario—about fifteen minutes of background reading.

Upon completion, another program loads automatically. You are then asked for the name of your character. Each character has four traits to which you assign random numbers given by the computer. The numbers assigned determine how well you can do things—fight or make friends, for example. If the character survives, his name and score is stored on disk and may be used later if you like.

At this time, you can proceed with the basic scenario, or put in another diskette with a different adventure—new rooms, treasures and monsters. Scenarios II and III are available at \$12.95 each, and require the original diskette (\$24.95) to run them.

You select from four skill levels, and then the scenario is loaded into memory. The character shows up in one of more than 120 rooms containing 25 monsters, various treasures, devices, and weapons. Unlike most adventure programs using commands such as "TAKE KNIFE," there are instead, 14 major commands. These include four directions (N, S, E, W), attack (A), run (R), make friends (F), get, drop, or use something (G, D, U), look (L), inventory (I), condition (C), or quit (Q). This limits things somewhat, but not for experienced adventurers; it does, however, make it easier for the new adventurer to get a feel for these games. Like any adventure, there are the usual tricks that participants pick up along the way.

The object of *Ringwraith's Lair* is to rescue the princess and return her to safety—a task not easily accomplished (not to mention, trying to maximize your score!). In trying to get through the Lair and rescue the princess, you'll discover two less than ideal situations: One, you cannot save the game in progress in order to continue later. This means that if you quit, you kill the character, and

Adventure Registry

RINGWRAITH'S LAIR

An Adventure Successfully Completed

By Kevin Zeeb

4206, 14707-77 St
Edmonton, Alberta
CANADA T5C 1E7

you must start from scratch. Therefore you'll have to record your progress on a map so you can re-trace your path. The second problem is fighting an enemy. The blow-by-blow description of the battle can get quite boring—especially after you miss ten times and your opponent hits you once. You just want to get the battle over with, and a minute later they're still going at it. Sigh! Just to print the outcome of the battle would have been better. Oh well, what game is perfect?

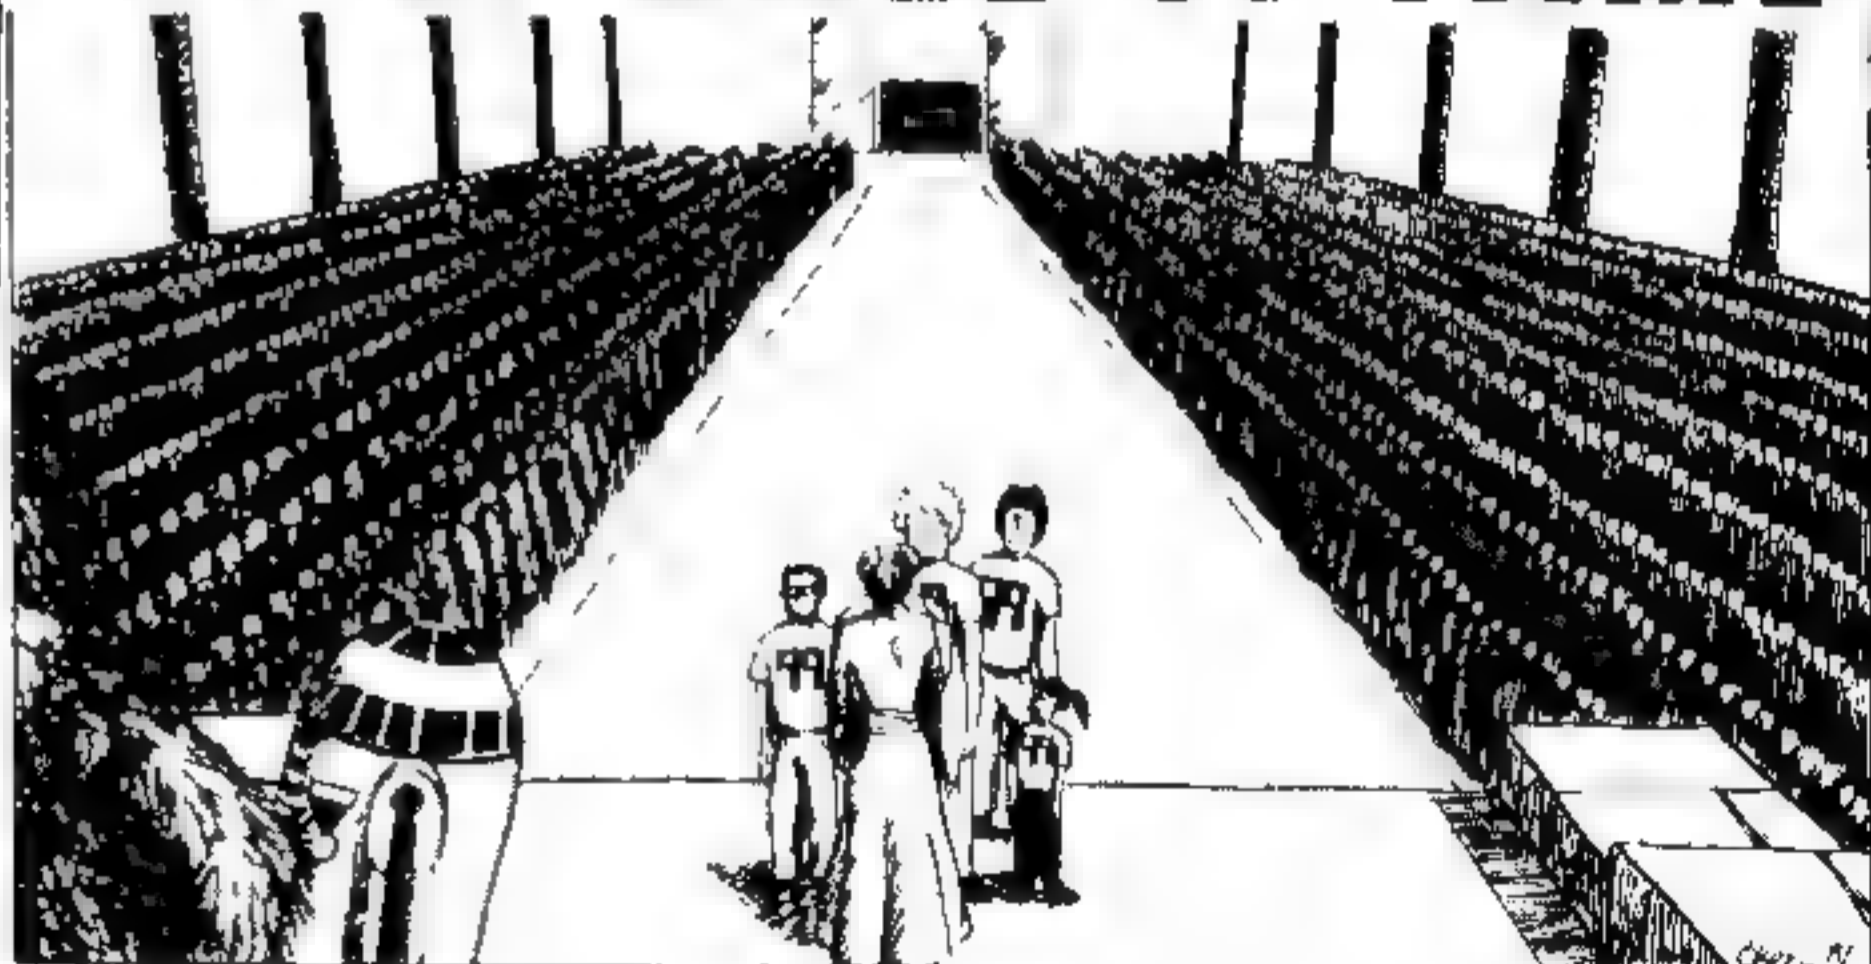

All in all, *Ringwraith's Lair* is a fair game—a welcome addition to the family of available

third-party software for the TI Home Computer. If you're an adventure fan, this game will probably be worth the money to you. If you're new to this game genre (and have the necessary peripherals), it will give you a pretty good idea of what adventuring is all about.

Now, back to the adventure. How in the world do I get past those fire-breathing dragons? HMMMMMMMM...

Ringwraith's Lair is available in Extended BASIC through Fantasy Computing, 1586 South Citrus, Escondido, CA 92027.

99'er HALL OF FAME

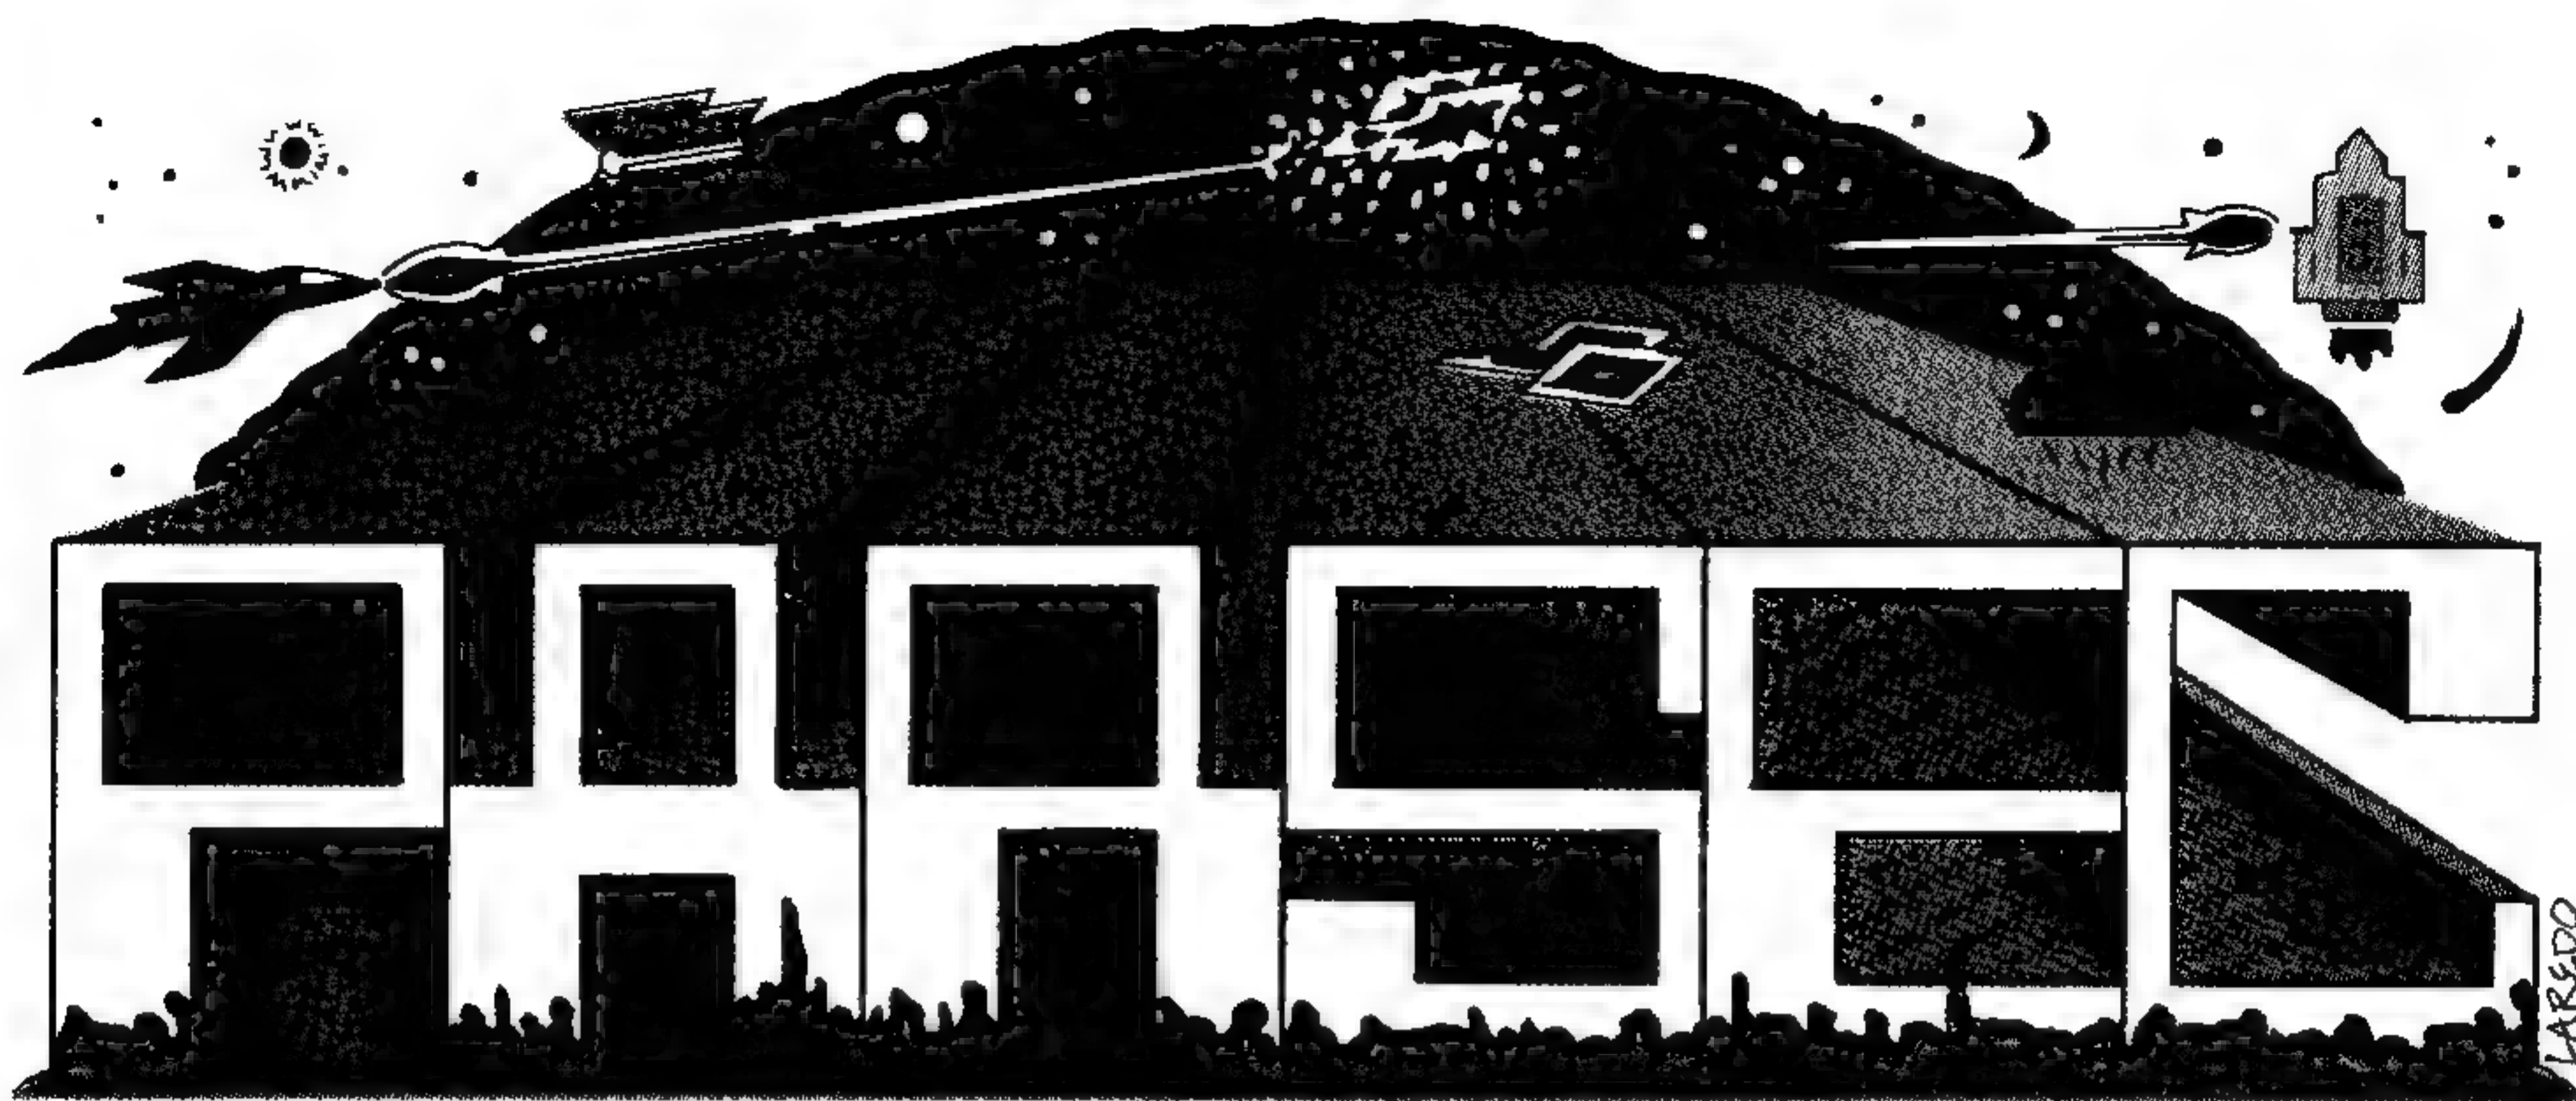

This month's inductees all proved their merit under the competitive pressure at the 99'er TI-Fest gaming contest. Each 1st place winner received a Home Computer and Software.

Score: 44,900

An Arcade Game Review

By C. O. Umber
Silicon Gulch, CA

My pockets finally emptied of quarters, I started for home. Overall, it was an enjoyable evening—plenty of video arcade action and excitement. Anyone observing me would have found it hard to believe that I was actually “working.” That’s because *my* work is what others regard as “play.”

You see, I’m a video game designer. You’ve probably never heard of me personally—even though some of the games I’ve worked on have achieved a fair measure of success and are presently quite popular. I’m not a name-dropper and don’t like to brag, so don’t worry—you won’t be subjected to a long, boring list of credits and accomplishments. Let the others take all the glory; the pleasure of the work itself is reward enough for me.

Although I look just like any other skillful game player while at the arcade—a bit, somewhat older than the average “hot-shot”—it’s what I do when returning *home* that marks me as a professional: out comes a large pad of graph paper and colored marker pens, and on goes my word processor. What I attempt to do is make detailed notes of everything I’ve seen, heard, and experienced. I also draw accurate pictures of the interesting or unusual screen effects and dump the evening’s recorded audio from the microcassette (in the pocket recorder I always carry with me) to a master tape in my library of arcade sound effects. Each new noise, musical passage, and speech pattern must then be carefully catalogued and indexed. As you can see, we game designers take our research work seriously.

On this particular evening, something bothered me—a strange feeling I couldn’t quite put my trigger finger on. As I made my last entry in the computerized diary, and got ready to pull

the big plug and turn in for the night, a sudden blinding flash of psychic energy riveted me to my ergonomic chair and put me into what my worried wife later described as a trance-like state—complete with glazed eyes, shallow breathing, and obliviousness to my surroundings. I had *seen* it... the “ultimate” video game!

The next few days found me working at a feverish pace—trying to get down in some kind of recorded form everything I had seen in that rare split-second of eternity that most inventors can only dream of stumbling upon. By mid-week I had finished. Satisfied that all my thoughts were either safely down on paper or recorded on magnetic media, I packed my bags and headed for 99’er TI-Fest in San Francisco where I hoped to see some of the new Texas Instruments arcade gaming software.

It didn’t take me long to zero in on the main gaming attraction—*Parsec*. The vivid imagery, spectacular explosions, and mysteriously monotonic female voice echoing all over the hall couldn’t help but arouse the competitive nature of one battle-scarred joystick jockey like myself.

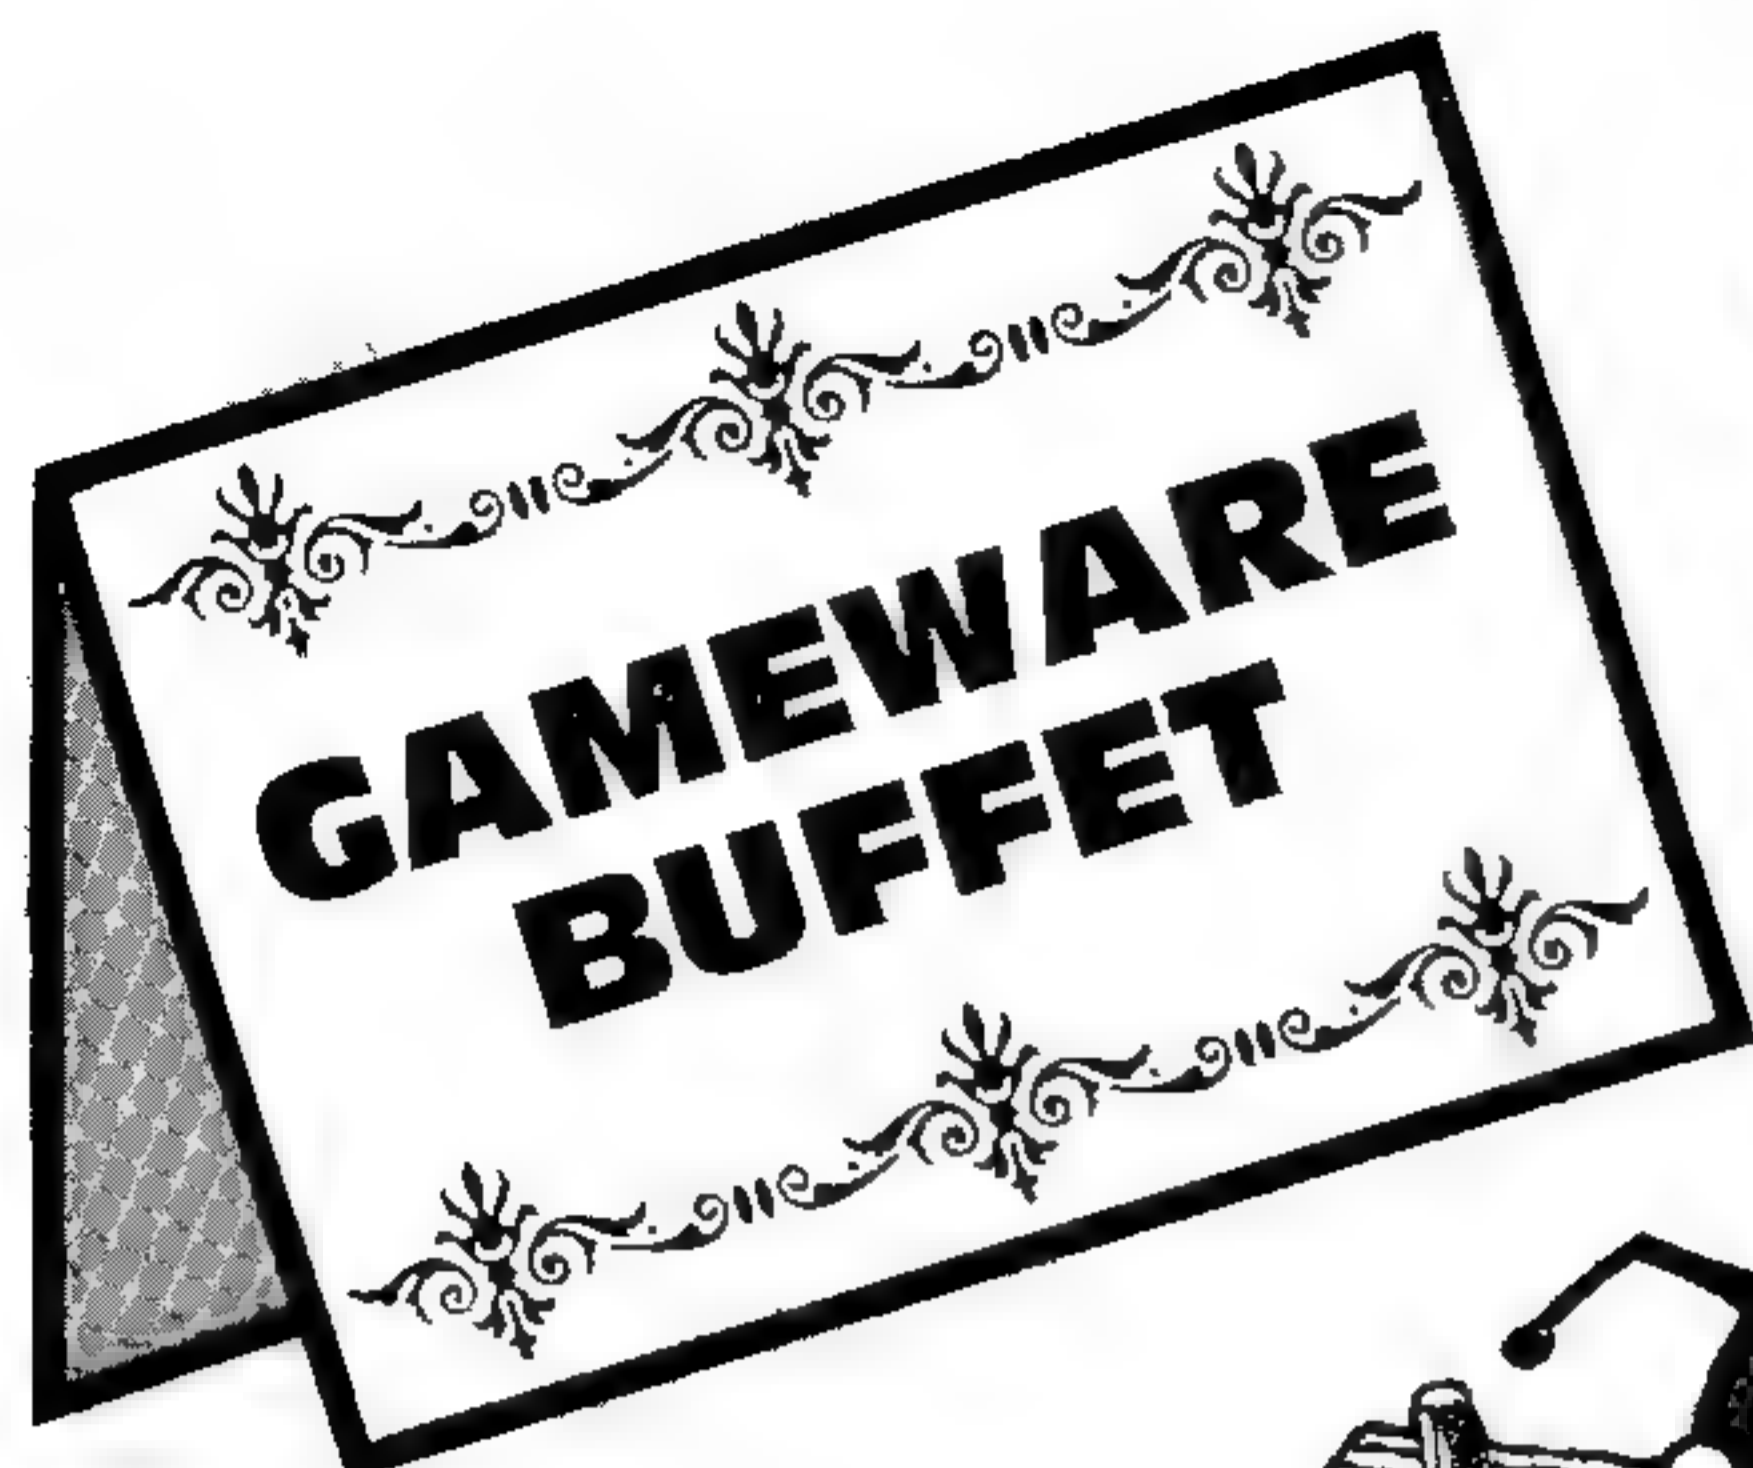

The Computer Gaming Land contest was well underway and I had a hard time finding an empty *Parsec* station. Finally, one trigger-happy senior citizen blew up his last ship when his own laser overheated. Shaking his head in utter disbelief, he headed for the showers. This was my chance. Paying no attention to the glares and stares of other showgoers as I leapt over two wheel chairs, elbowed my way through a visiting users group, and did an end run around a trio of TI judges, I dove for the vacant joysticks and immediately obeyed the mysterious “electronic lady” when she told me to “press fire to begin.”

It wasn’t hard for an old arcade pro like me to spot the elements of *Parsec* that I first saw in three of the most successful arcade games of all time: As in *Defender* and *Scramble*, there’s the illusion of flying over a planet’s surface, the multi-level battles with a variety of alien craft, the required fuel monitoring and replenishment, and the dramatic explosions simulated by what appears to be over 100 pieces of radiating debris. And, as first seen in the immensely popular *Asteroids* game, *Parsec* contains the dual elements of maneuvering and blasting to avoid collisions with deadly chunks of space rock hurling toward a player’s ship.

This is definitely *not* to say that *Parsec* is a “me-too” game—a slavish copy of any of its arcade predecessors. On the contrary, this new Texas Instruments game is refreshingly different. For one thing, the separate elements are cohesively orchestrated into a visually and audibly stimulating action and strategy game that is both easy to learn and more importantly, creates an environment (of minimum intimidation) where playing skills may be progressively honed. This allows players of all ages to *learn* from the game and experience the satisfaction of improving their scores on a regular basis.

If you don’t think this is important, just observe several players at a *Defender* arcade machine. You’ll only see *two* types—the gaming pros like me who score a zillion points and can stay there a week on change of a dollar, and the vast majority of players who attempt to “get into” the game with a handful of quarters and never last more than ten seconds! Without fail, every one of these players who suffers this humiliating defeat ultimately swears off the game and even avoids

Continued on p. 47

Termite

By James R. Dew

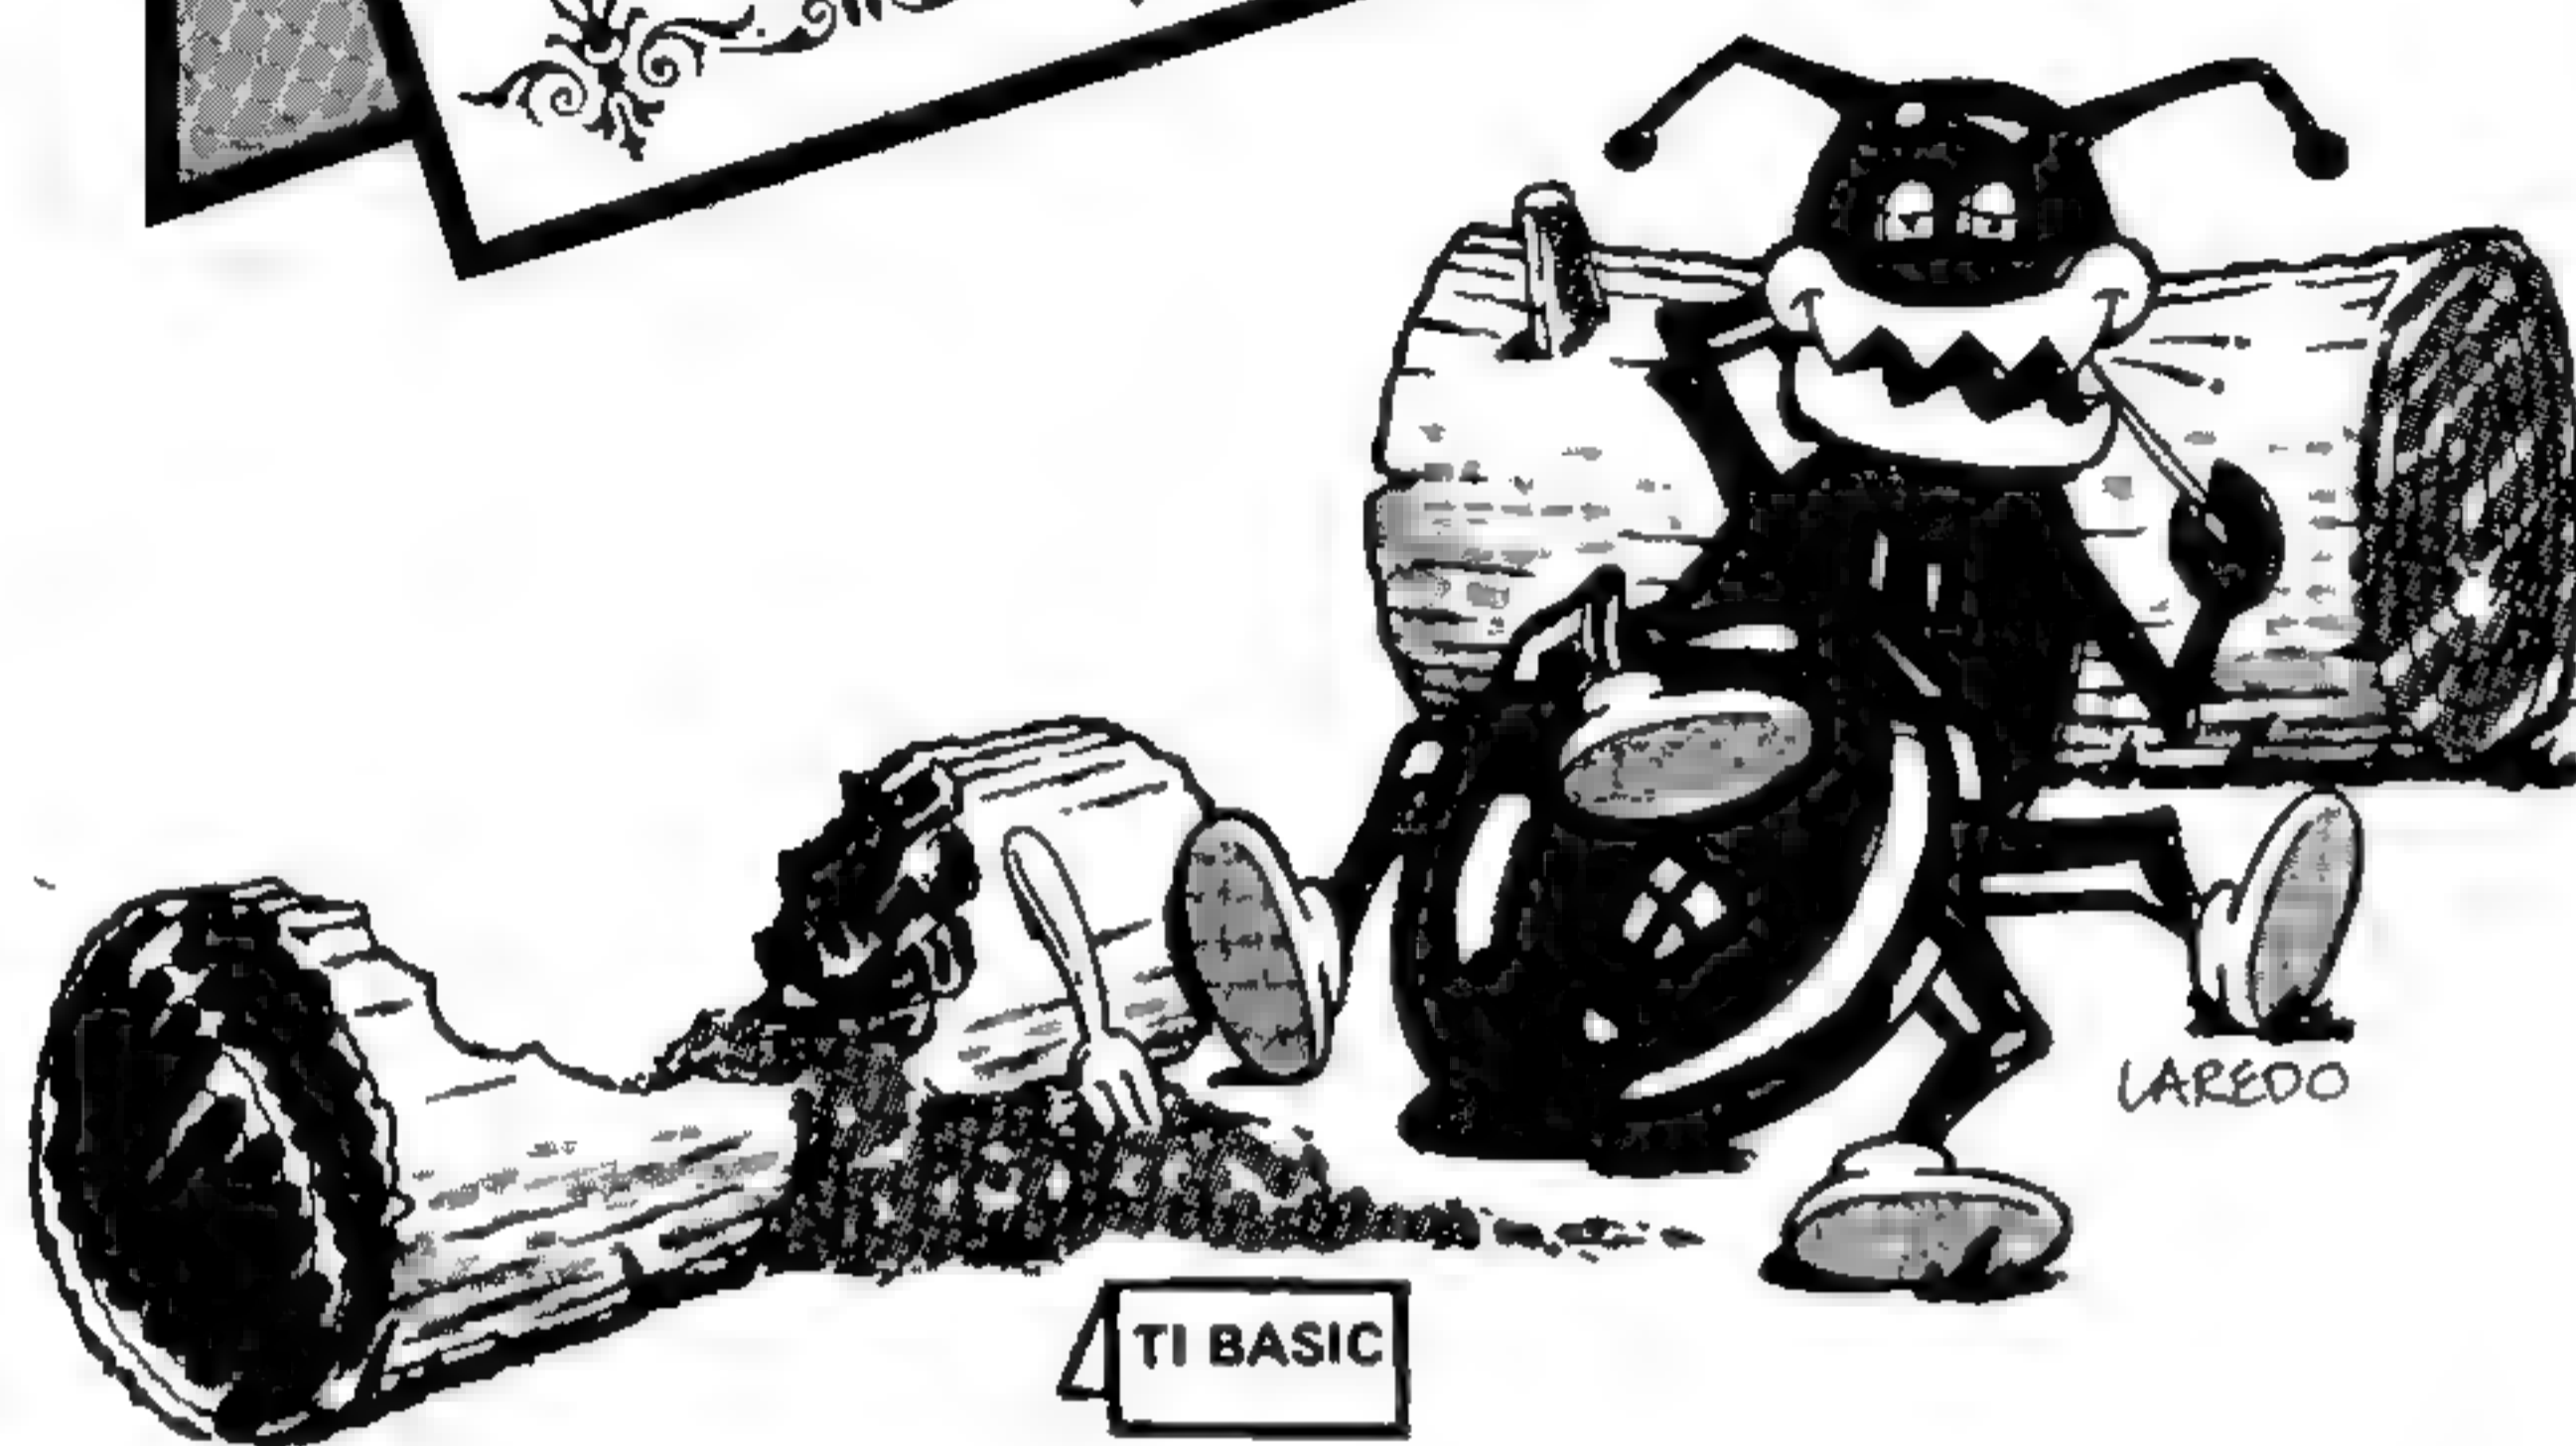

4050 Shoreline Drive
Robbinsdale, MN 55422

Here is a termite that doesn't deserve a visit from the tan man in the unmarked van. This bug will be welcome in any home—wood-frame or otherwise—as long as the place is furnished with a TI-99/4A.

TERMITE is a simple game, easily grasped by children, yet challenging and amusing enough to attract the attention of adults.

Your goal is to guide a termite through a block of wood (left to right) on the screen. The keyboard arrow keys control the little guy's movement. The block of wood is peppered with knots that the termite cannot chew through. If he hits a knot, he has to go back and start over. Of course, the knots in the wood are invisible, making the job a little tougher.

There are two levels of play in TERMITE. In the first level, when the termite runs into a knot, the locations of all knots in the wood flash briefly on the screen.

Gold Rush

By William K. Balthrop

99'er Staff

Everyone was doing it and why not! There was always a chance of striking the mother lode. People came from all parts of the country in search of riches. I too was caught up in the excitement, and before I knew it, I was on the trail with my pick, shovel, and two crates of dynamite.

I must have drifted for weeks before I settled on my claim. I don't know why I picked this spot—just a feeling I guess. The first day I hit solid rock—but I'm not one to get discouraged easily, so I started a new shaft. I was luckier this time, the loose dirt and rocks making for easy digging. I hadn't scratched as deep as my boot tops before my feeling about this area began to pay off.

It was only a small vein but it was gold! That yellow stuff so many people have lived and died for. I just knew this was the end of the rainbow... then, a few days later I hit solid granite! The only way through was to blast with dynamite, so I lit the fuse and ran like the devil. It was close, but the granite was cleared, and behind it was the most beautiful streak of gold I had ever seen. Little did I know that my luck was about to change.

I had gone back near the head of the mine when disaster struck. The wall began to crack and a gush of water flooded the entire shaft! This mining business is full of danger...

Sooner or later, you'll remember the location of the knots and be able to guide your termite safely through the wood.

In the more difficult mode of play, the only knots shown are the ones you hit, and the game gets considerably tougher.

Programming Notes

For the sake of simplicity, this game contains logic generally considered poor programming practice. I refer to line 1550 which jumps into line 1570 upon a win. But line 1550 is in a subroutine, while the code starting at line 1570 will never do a RETURN! Instead, the main program is re-entered by a GOTO.

It works in this particular program because this code can only be executed twice — once for each level of play. If you did this in some programs, the result would eventually be a *MEMORY FULL* error message.

Continued on p. 48

The Program

When I started programming "Gold Rush," I tried to simulate the prospector's dangers and rewards by setting up the screen so that the player could explore and actually see his mine being created.

The game begins with your miner standing on top of a block of earth. The miner is restricted to digging in any of three directions, down, left, or right. To move the miner, merely press any of the four arrow keys, "E,D,S,X."

There are two ways to dig. The first is simply to mine a section. This is done by pressing the "M" key, followed by an arrow key for the direction of the dig. If the earth is not made of solid rock, or granite, the area you mined will clear, any gold ore discovered will be added to your score, and the miner will advance into that area. The other method of digging is to blast.

On the surface is a small shack containing three boxes of dynamite. Each box contains ten sticks for blasting through solid rock, or granite. To pick up the dynamite, first position the miner over it and press "P." The dynamite will now follow you everywhere until you drop it by pressing "P" again. You set the dynamite and light the fuse by pressing "L" followed by an arrow key to designate which direction you are blasting (You can't blast upwards).

Once the arrow key is pressed, the fuse will start burning. You have about five seconds to get out of the area or be blown to bits! The miner must be at least *three character spaces* from the explosion.

You may have the misfortune of running into an underground stream. If you are lucky, you will discover the stream while digging downward, and that will be the end of it. Should you hit the stream while digging to the left or right you will have to move fast to keep from drowning in a *mine flood*! If the flood waters reach a downward shaft it will take that course until it must turn left or right. The flood will continue until there is no place left for it to go. Good luck and happy mining—the gold bug is coming, and he's looking for you . . .

[If the disk system is used without the 32K memory expansion, enter CALL FILES(1) before loading *Gold Rush*—Ed.]

EXPLANATION OF THE PROGRAM Gold Rush

Line Nos.	
100-150	Rem statements, title and version.
160-170	Display the title screen.
180-200	Initialize variables.
210	Display level of play screen and input level.
220-260	Initialize variables for screen messages.
270-510	Initialize the mine area.

520-610	Placement of rock, granite, gold, and underground streams. Initialize graphics characters, and display playing screen.
620-720	Main control loop. Read keyboard and branch.
730-800	Move miner up.
810-890	Move miner left.
900-980	Move miner right.
990-1040	Move miner down.
1050-1130	Pick up, or drop dynamite.
1140-1450	Light dynamite.
1140-1150	Display message, check for position.
1160-1200	Read keyboard.
1210-1250	Place dynamite to the left.
1260-1280	Place dynamite to the right.
1290-1310	Place dynamite downward.
1320-1340	Countdown for fuse burning.
1350-1370	Explode dynamite.
1380-1390	Place new ladder in tunnel.
1400	Clear the shaft.
1410-1430	Check for ore content.
1440-1450	Hit gold.
1460-1800	Hit underground stream.
1460-1480	Display initial stream.
1490-1510	Check for direction of flow.
1520-1570	Flood to the left.
1580-1630	Flood to the right.
1640-1670	Flood down a shaft.
1680-1730	Check for a branch in flooding.

LEARN TO FLY!

The Dow-4 Gazelle is a simulation of a 4-place, single-engine, high performance aircraft, which will provide fun and challenge as you learn to fly. A high quality program written by a professional programmer/analyst who is also an experienced instrument-rated pilot, the Gazelle is a real-time simulation which responds rapidly to the controls (within one second on the average).

On your screen you see the instrument panel, which has 10 dials with moving pointers and 11 indicator lights. The plane is flown with the joystick, while the keyboard is used to control power, flaps, fuel, etc.

The manual contains 30 pages of text, a glossary, and seven full page figures. It introduces you to the art of flying and leads you, a step at a time, from novice to professional. Learn to take-off, land, navigate, fly instrument approaches, and more. If you get into trouble, you can freeze the action in case you need time to assess your situation. Sound effects add to realism.

This program pushes the TI-99/4(A) to its limits. For both 99/4 and 99/4A, Does not require anything other than a joystick and cassette recorder.

ARE YOU LOOKING

FOR AN EXCITING JOB ?

☐ NO ☐ YES

Do you have experience with one or more of the following:

9900 Assembly Language, Pascal, technical writing/editing, hardware design, magazine administration/production?

☐ NO ☐ YES

Are you living in, or are willing to relocate to the Pacific Northwest?

☐ NO ☐ YES

Can you stand hard work, deadlines, and get by with modest monetary compensation at first ...

☐ NO ☐ YES

Are you easy-going, prefer to be around non-smokers, and willing to work evenings, weekends, & holidays (if need be)?

☐ NO ☐ YES

Do you want to work with a group of people who answered YES to all the above, and put out a magazine just like this one?

☐ NO ☐ YES

If you answered YES to all questions above,
please reply in strictest confidence to: **99'er Talent Hunt**

1500 Valley River Drive, Suite 250 Eugene, OR 97401

Gold Rush... from p.45

1740	Display message for getting killed.	2310	Display for Line 22 on the screen.
1750-1800	Read keyboard, and branch to move during the flooding.	2320	Display for Line 24 on the screen.
1810-2180	Mining subroutine.	2330	Subroutine to scan keyboard until a key is pressed.
1810-1860	Read keyboard and branch to mine in any of three directions.	2340-2390	Subroutine to manipulate the contents of the mine. Initialize beginning of subroutine. P1=x coordinate, P2=y coordinate, z = the contents of the mine when m = 2, z = the value to place in the mine when m = 1. When m = 3 the mine is initialized.
1870-1960	Mine to the left.	2340	
1970-2060	Mine to the right.	2350-2360	Check for m(mode) initialize mine.
2070-2180	Mine down.	2370-2380	Check for m, return the value in the mine to variable z.
2190-2210	End of game message option to play again.	2390	Place new value from z, into the mine.
2220-2270	Data for display, and sound.		
2280	Read data and display subroutine.		
2290	Read data, display, and input response.		
2300	Read data, display, and input response with the validate option.

NO/ON software

SOFTWARE FOR THE TI 99/4(A) COMPUTER

Fast, well, structured programs which fully exploit the potential of the TI computer for less than you expect to pay. Here is just a short list of what we have:

- Interactive graphics
 - a fast way to draw high resolution graphics
 - 3-D Startrek
- TI Graphics adds a new twist to this old favourite
- Music synthesizer

High resolution games which test the limits of your skills

PARSEC... from p.43

walking too close to the machine on subsequent visits to the arcade.

Parsec is a rare blend of 16-color graphics, human-quality synthetic speech, animation, and sound effects. It truly shows off the features of what is obviously a marvelous game machine—one that is, however, marketed as a "home computer." If this is any indication of multi-purpose home machines to come, the games-only machines (a la Atari VCS) will soon be relics of the past.

The natural, life-like speech adds an important element to the game play. The female synthesized voice (the speech synthesizer is necessary if you want to hear it) enhances the game by simulating a starship's onboard computer; it warns of oncoming alien craft and refueling tunnels, informs you when your lasers are "on target," let's you know when extra ships and points are awarded, and congratulates good performance. Although not necessary for play, the voice allows you to concentrate more fully on activity above the planet's surface instead of having to visually check messages printed at the bottom of the screen.

If you plan on purchasing *Parsec*, I suggest you also invest in some good joysticks. The standard TI issue I used at the show performed adequately

enough. There were also a few other brands being sold at some of the exhibitor booths, but I didn't get a chance to try them. From my observation of show players, I predict that *Parsec* addicts—and this game will *definitely* foster a fair share of them—will inevitably experience a case of "joystick cramps" in their early bouts with the game. This results from clutching the joystick too tightly in the heat of fierce combat. After a player learns to relax more and avoid unnecessary vertical movement and laser bursts, his or her score should increase dramatically; the pain and numbness in the fingers and hand will then also disappear.

Of course, use of joysticks can be avoided altogether because the keyboard has also been programmed for lateral and vertical movement, as well as firing the laser. Professionals like myself, prefer the keyboard to joysticks. The interaction is faster and more precise—but it takes a while to build up the necessary finger dexterity. Joysticks do, however, allow a player to comfortably sit back further from the screen, and they enhance the realism of ship control—especially when navigating through treacherous, narrow subterranean passages or through dense fields of tumbling asteroids.

But even though a player uses joysticks, some involvement with the keyboard is still necessary. For example,

pressing the number keys 1, 2, and 3 varies the speed (and hence, affects the sensitivity of the joystick) at which a player's ship can move vertically. (I like Lift 3 for doing battle with all shooting ships—e.g., the DRAMITES, URBITES and BYNITES; Lift 2 for navigating my way through the asteroid belts and tracking the devious ramming-type craft—e.g., SWOOPERS, SAUCERS, and low-flying LTF's; and Lift 1 for traversing the underground fuel tunnels). A joystick user might also want to freeze the action (an excellent learning device, but frowned upon in competition) by depressing the console's P key.

As I said earlier, the action and special effects are skillfully integrated. The two TI programmers Jim Dramis and Paul Urbanus [see the January issue for our "Designer's Spotlight" interview with Mr. Dramis—Ed.] evidently knew just what they were doing. *Parsec* is indeed a highly polished arcade game. It provides an excellent "keep 'em at home" form of family entertainment (especially on a large screen projection TV), and is an ideal software package—just plug in the cartridge and press a couple of keys—for video gaming competition. And at a suggested retail of \$39.95, the price is right.

Speaking of competition, I didn't notice when a crowd of people started gathering around me during the TI-Fest

Eastbench Software Products

Quality software for the TI-99/4(A) home computer

AUTOMATIC FILER [\$37.95] Can be used to create and manipulate data files containing up to 11 categories with 200 records per file. This versatile program allows the user to subdivide or combine, sort or search and list or delete data files

DATA CONVERTER [\$27.95] Performs numerical operations on data files created by Automatic Filer. Insert character strings into existing records and use to save or delete modified files

VIDEO PLOTTER [\$19.95] Creates a screen plot up to 28 data values using files created by Automatic Filer. Many options available for plotting your data. All of the programs described above require extended BASIC, a disk system and the expansion RAM accessory. All three may be purchased as a package for \$79.95. Cassette versions under development

TALKING BARTENDER [\$24.95] Has a repertoire of nearly 100 drinks. Select by name or type. Requires disk system; speech synthesizer and TE-II optional

PHONE BOOK [\$24.95] Program stores names, addresses and phone numbers. Can be used to dial using touch-tone telephone systems

Numerous other programs for astronomy, mathematics and home finance available. For a FREE CATALOG write to:

TI-99/4A COMPUTER PROGRAMS

I am producing 1 or 2 new systems a month, primarily for disk system owners. A summary of the items available are listed below. Write for more detailed information.

CASSETTE SYSTEMS:

- ★ **Harvey's Jamm program** — Converts your keyboard into an organ. 7 music keys, 1 prgm on tape. \$30.

MINIMAL DISK SYSTEM PROGRAMS THAT RUN IN T I BASIC:

- ★ **HARVEY'S JAMM PROGRAM** — All music keys \$40.
- ★ **HOW TO CREATE AND MAINTAIN RELATIVE FILES** — Text & programs. \$50.
- ★ **NAME AND ADDRESS FILE** for friends & relatives \$30.
- ★ **APPOINTMENTS CALENDAR** — Very fast response \$30.
- ★ **UTILITY PROGRAM** — File delete and disk index display — Listing \$5.
- ★ **SORT UTILITY** — Relative files up to 500 records — Sequential files too \$10.

MUSIC ENTRY/PLAY SYSTEM — For play-by-ear musicians. Program generated harmony. Requires TI Extended Basic and 32K memory. Very fast song entry. \$200.

A printer is not required. Send me a Bank Money Order and I will ship right away using First Class Mail. Delivery & satisfaction guaranteed. U.S. delivery, instructions and either a disk or tape included in the price, except the Utility programs are printed listings not over 144 lines of code. Dealers and Distributors — Your inquiries also welcome.

Call 1-803-576-7245, or write:

James Harvey
159 Dover Road
Spartanburg, S. C. 29301

T.I. TOAD

Maneuver T.I. TOAD across 4 lanes of heavy traffic then through swift river currents to reach his home. But watch out! The river is full of surprises. Different colorful animated characters appear at each new level making this one of the most exciting games ever for the 99/4(a).

Written entirely in assembly language and comes complete with its own high speed disk loader that's more than 10 times faster than the extended basic loader.

\$29.95

Full money back guarantee! If you are dissatisfied with this program for any reason, return it within 5 days for a full refund

Equipment required: memory expansion, extended basic disk drive (joysticks optional).

COMPUTER SERVICES

NO NONSENSE SOFTWARE for the TI 99/4A. All software comes in disk or cassette form with an audio cassette and written instructions.

Special Introductory Offer. Buy any software package and get a second package of the same or lower price at a 50% discount. Example: Buy BUSINESS PACK for \$189.95 (A great deal — BUS. PACK includes all five \$49.95 programs — INVENTORY, ORDER ENTRY, SALES, MAIL LIST and PMS SORT. — \$249.75 if purchased separately) and get RECORD KEEPER at 50% off. Total cost, \$284.93. You save twice, \$59.80 on the BUS. PACK and \$94.98 on the discount! Check out these program titles and order yours today!

INVENTORY * ORDER * SALES * MAIL LIST * PMS SORT * BUSINESS PACK (includes all five of the above) * BILLING DOCTOR M.D. * BILLING DOCTOR D.D.S. * BILLING LAWYER * BILL MASTER * RECORD KEEPER * JOB COST * SPELLER-ENGLISH * SPELLER ENGLISH TO SPANISH * SPELLER-SPANISH TO ENGLISH.

All software is serialized, unlocked and updatable by the user. Destiny Computer Services specializes in writing custom software programs not covered by those listed above. In addition, Destiny carries a complete line of Direct Market Software. Write for details.

"Software of the future... NOW!"

WINCHESTER DISK PRODUCT ANNOUNCEMENT

MYARC, INC. announces its Winchester Disk and Controller, the WDS/100, which brings hard disk capacity and reliability to your TI 99/4 microcomputer. Our "Unix"-like "directory manager" features robust file management and MYARC's error correction coding provides excellent program and data file integrity. Available in 5 or 10 Megabyte models, the easily installed WDS/100 can grow as you grow to accommodate a total of 4 hard disks. That's 40 Megabytes of on-line storage!

MYARC packs this and much more into its WDS/100 system at a competitive price.

IT OFFERS:

- Direct interface with the TI 99/4 operating system
- Upward compatibility with TI's floppy disk system
- Complete array of disk utilities
- Flexible configuration
- Easy installation
- Reliable backup
- State-of-the-art ECC
- Customized directory management
- Winchester reliability and high speed performance
- Special "time of day" clock option

Write for additional product
and pricing information to:

Psychometric

An eight part mental health inventory
Measures which psychological areas (below)
may need further testing:

- PERSONALITY FACTORS
- LIFESTYLE STRESS
- FEAR
- ANXIETY
- MARRIAGE, FAMILY
RELATIONSHIPS
- JOB OR OCCUPATIONAL
DEPRESSION
- NON-FAMILY PERSONAL
RELATIONSHIPS

Offered only as an aid to individual self-awareness; this program does not provide any psychiatric treatment, is not a substitute for professional psychological counseling, nor is it intended as such.

Available only on cassette,
runs on 99/4 or 99/4A

Program with instructions for
interpretation \$8.95
Send cash, check, or money order. Shipped
prepaid anywhere in the U. S. California
residents add 6% state sales tax.

MICHIGAN SOFTWARE

P.O. BOX 2091
ANN ARBOR, MICHIGAN 48106
SOFTWARE FOR THE 99/4(A)

- CHRISTMAS CARD (X-BASIC) Personalized greetings, Christmas tree and music.
\$10.00 cassette \$12.50 disk
 - BIRTHDAY PARTY (X-BASIC) Input name and age. Graphics, birthday cake and music.
\$10.00 cassette \$12.50 disk
 - BATTLESHIP (X-BASIC) Play naval strategy game against computer. Three levels.
\$10.00 cassette \$12.50 disk
 - HIGH-RESOLUTION GRAPHS (TI BASIC) Plots mathematical functions in cartesian or polar coordinates. Extensive program examples with many possible educational and professional applications.
\$12.50 cassette \$15.00 disk
 - LINEAR EQUATIONS (X-BASIC) calculates all real and complex roots of quadratic, cubic and quartic equations.
\$10.00 cassette \$12.50 disk
 - GAMMA AND BESSEL FUNCTIONS (X-BASIC) including nonintegral order. Suitable for use in subroutines.
\$10.00 cassette \$12.50 disk
- SEND CHECK OR MONEY ORDER. WE WILL PAY SHIPPING AND MICHIGAN SALES TAX.

The First 3rd Party Disk Drives

Expand the full potential of the TI-99/4(A) with plug compatible disk drives.

- Disk Drive for Expansion Box.
double sided, 48 tracks per inch \$499.95
- Outboard Disk Drive.
double sided, 48 tracks per inch \$599.95

standard 90 day warranty

DISK MANAGER II SOON AVAILABLE

Available on Diskette - Now for \$22.50

- GOLF GAME—9 holes, 5 clubs
 - TRYCONS & TROBS
 - WORD CHASE—2 Player Game
- ALL IN EXTENDED BASIC —
Add \$5.00 Shipping & Handling

ASSEMBLY LANGUAGE IS HERE AT INTERSOFT

Powerful assembly language un-eashes all the might and speed of 99/4 and 4A. Assembly language is now made possible on disk or cassette by Mini Memory Module. This all Assembly program provides the fastest speed ever.

DEFEND THE CITIES II — Enemy aliens are attacking the five most important cities of the planet Earth. An alien ship orbits overhead dropping bombs on the city. You must destroy the bombs before they reach the skyline of the city and you must destroy the ship to end the attack. Your ship rotates 360° enabling you to fire or accelerate in any direction. After successfully defending one city, you move on to the next which has increased difficulty and point values. Spectacular arcade action, graphics, and sound effects.

This 4K program requires either MMM, console and cassette or Editor/Assembler, 32K disk system and console

Cassette \$19.95, Disk \$21.95

DEFEND THE CITIES - Extended BASIC Version
Cassette \$19.95

WIZARD'S DOMINION A Fantasy Adventure

The Wizard is dead. The Voritka Ogres are on the prowl. Only the Wizard's Apprentice, the Evil Wizard, the Hero and the Evil Prince have enough courage to defeat them and rule Wavoria. Inside the caverns of The Wizard's Dominion lay gold, adventure and magical powers. Spend your gold wisely and prepare to meet a Voritka Ogre!

- 3-D Perspective
- Superb Graphics
- Ages 12 to Adult
- Become Master Wizard
- Magical Powers Galore
- Complex Battles
- Many Levels to Conquer
- Hundreds of caves per level

EXTENDED BASIC LANGUAGE

ALL THIS FOR ONLY!! \$19.95 cassette
\$21.95 disk

3-D MAZE - Enter the world of 3-D MAZE. Look down the hallways, explore them, find the dead ends and the loops. Try to remember in what direction you are going and then find the exit! There are hundreds of mazes, some easy, some very difficult. Come, try to conquer the world of 3-D Maze. Ages 12 to Adult. X Basic \$14.95 -cassette, \$16.95 - disk

BOMB SQUAD - Time is ticking away. Only 16 seconds left. To stop the clock the timer circuit must be cut. But which one is it? One more test and you should know. The question is, can you figure it out in time?

For high intensity excitement this is the best game we've seen. As the time relentlessly ticks away you must make tests on the bombs circuits and use logic to deduce which wires to cut. Over 20 levels of difficulty make this game a challenge for the beginner or expert. Ages 12 to Adult. X Basic \$14.95 - cassette, \$16.95 - disk

SANTA'S WORKSHOP

The Making of a Home Computer

1. Santa's auxiliary workshop (Texas brackets).

2. Once inside, our EEFM guide leads us down a half-mile hallway to the start of the Home Computer production line.

3. Here, each little component is carefully tested by a big computer before it becomes part of a Home Computer.

4. Santa uses many computerized tools in this huge workshop (elves can't do everything). Here the wires of the smallest parts are pushed into each board.

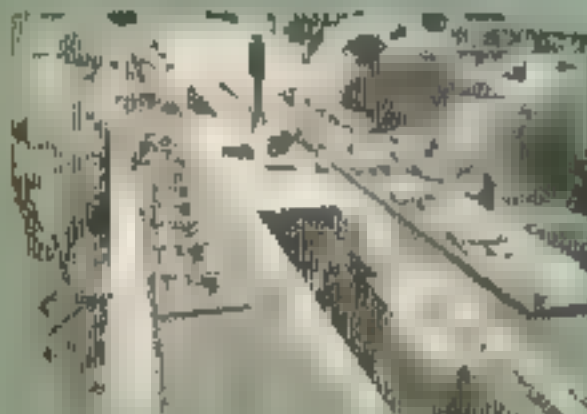

5. Another robot inserts the wire leads of some larger parts in the printed circuit boards.

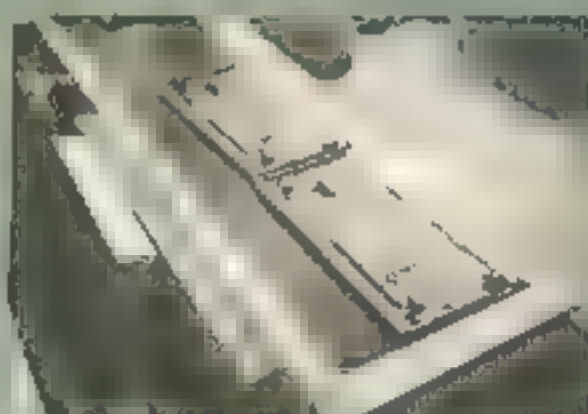

6. Not all Santa's helpers are robots.

7. Look at a fine people. Each one is putting parts in either the main or the power supply printed circuit boards.

8. The end of the line. All the parts are in place, ready for soldering.

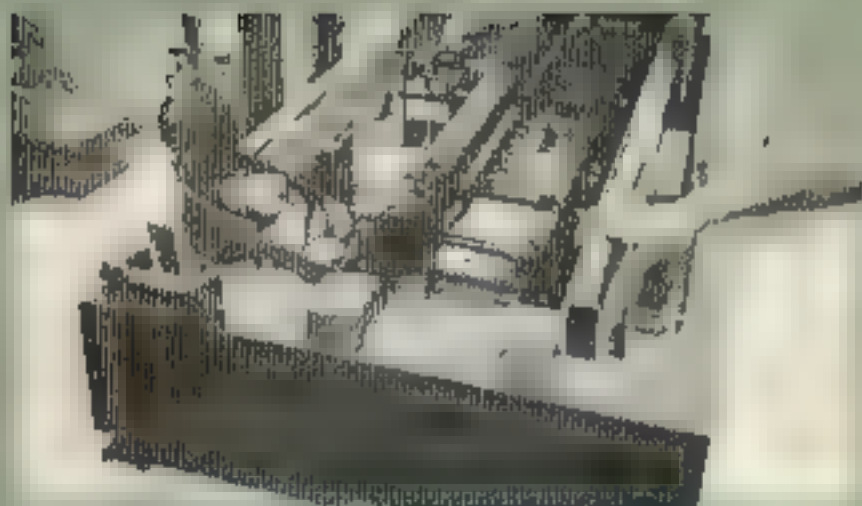

9. The main boards for the computer's circuitry, are ready for the "flow soldering" machine.

10. The power supply circuit boards are ready to be tested.

11. The boards go onto the moving rack of the huge soldering machine.

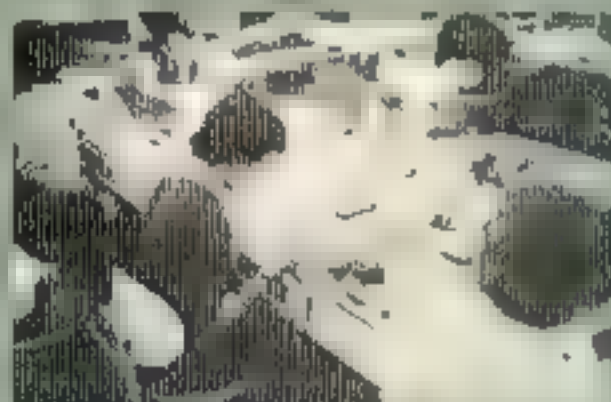

12. Now the boards pass over a hot river of solder, and all connections are made simultaneously!

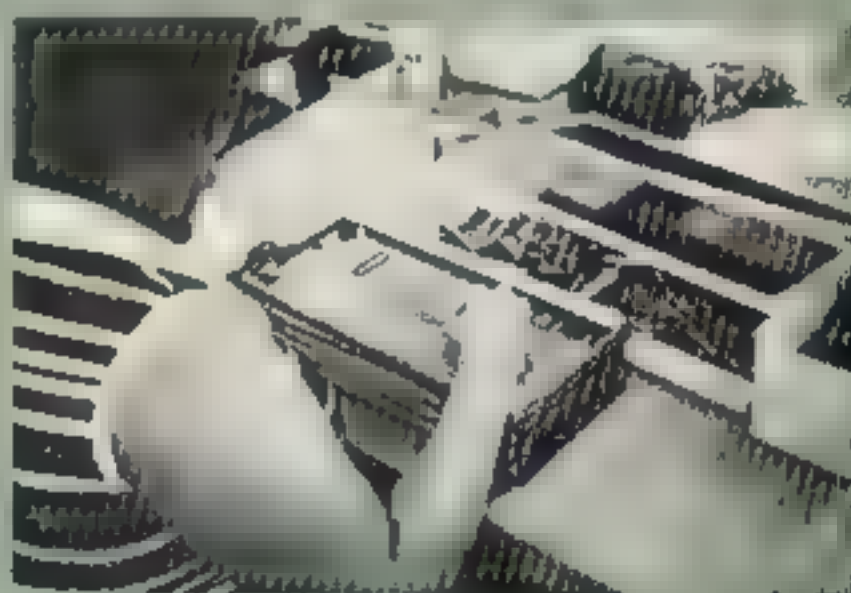

13. After the "metal river" ride, all boards receive a bath (to remove solder flux).

14. Talk about being pampered! After their bath, these lucky boards are individually dried. . .

15. With even more "TLC" they are treated to a thorough check with a hand soldered touch-up, if needed.

16. Now is the time to plug in the main computer "helpers" including the "giant" TMS9900 microprocessor chip

17. Santa's helpers test the main board for open or shorted connections.

18. The main printed circuit board is now powered up for the first time.

19. At the same time, the power supply printed circuit board is tested separately. . .

DISK DRIVES

FOR YOUR **TI 99/4A**

40 TRACK DRIVE \$299

These are complete drives with power supply & enclosure

DISK DRIVE CABLE \$29.95

(with purchase of drive)

There is a 15 DAY FREE TRIAL ON DRIVES. Warranty 120 days. Add \$5.00 per drive for shipping in Cont. US. UPS COD charge \$1.50

ORDER NOW!

Write or call. Toll free lines are for ORDERS ONLY! If you need technical information or service call (214) 337-4346. We accept VISA/MASTERCARD and COD orders by phone. COD orders will be cash, certified check or money order only. If you order by mail allow 2 weeks for personal checks to clear. Texas residents add 5% tax. All stock items are shipped within 24 hours. TEX-SOFT PRESENTS

Beanstalk™ Adventure

Now for the TI-99/4 and TI-99/4A an adventure game based on the classic fairy tale Jack and the Beanstalk where you become the lead character and your moves control your destiny and even may change the course of history.

(The giant might get you!)

This is one of a series of quality programs being written or reprogrammed for the 99/4 and 99/4A computers by TEX-SOFT, the TI 99/4A software affiliate of TEX-COMP Users Supply Division.

Send check or Money Order To:
TEX-SOFT Software
P.O. Box 33084
Garden Hills, CA 94024

Minimum Configuration Required:

1. 99/4 or 99/4A console
2. 1 Disk Drive and Controller *
3. 32 K Memory Expansion
4. Extended Basic Module

* Not available on cassette

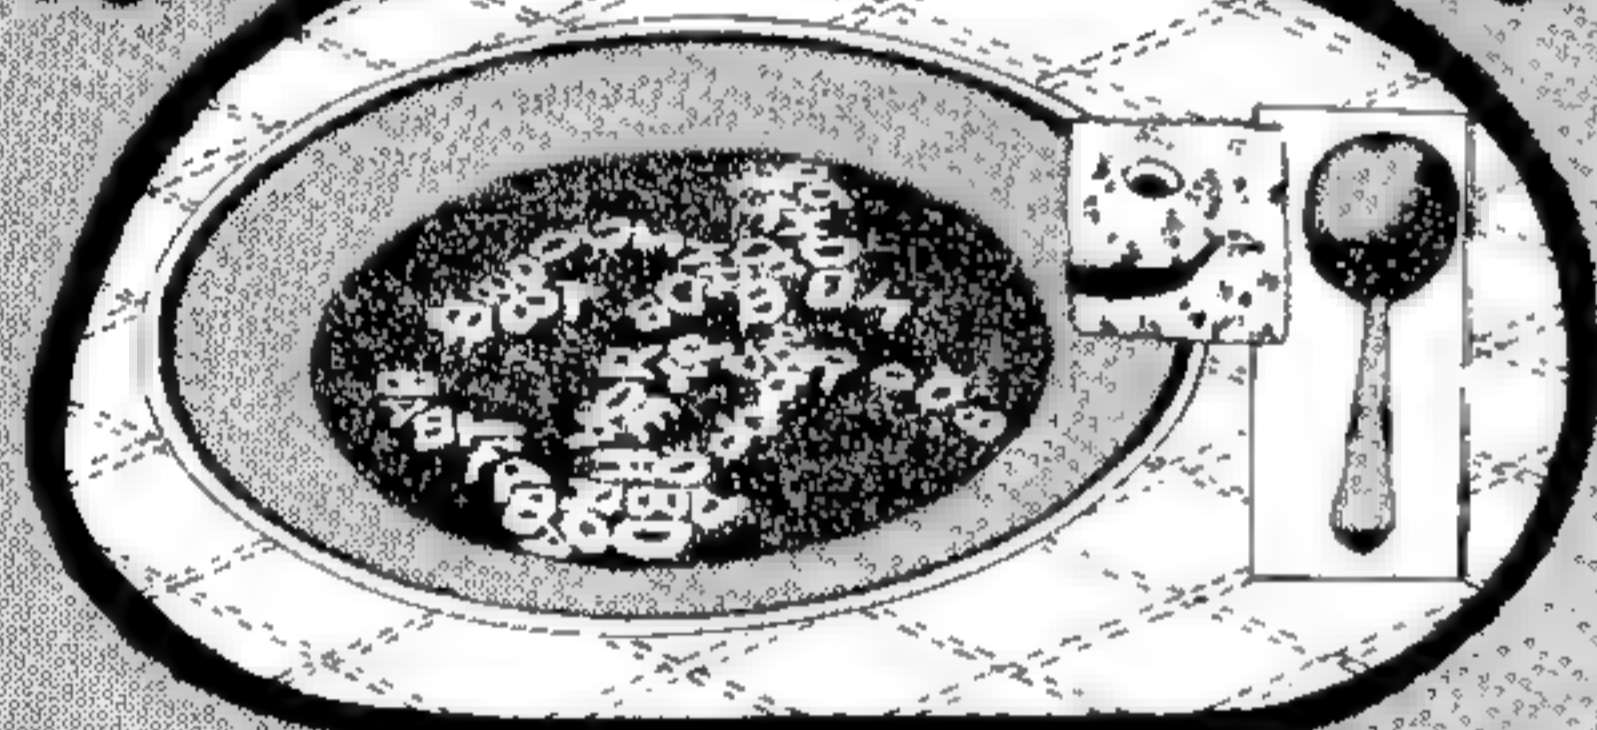

\$17.95

including shipping & handling

Reprogrammed for the 99/4 by George F. Staffer

DIRECT WRITER

THE WORD PROCESSOR WITH THE CAPACITY TO PRINT A COMPLETE BOOK - UP TO 99 CONSECUTIVE DISKS OF FILES MAY BE DOWNLOADED - EVEN MULTI-COPIES. CURRENTLY BEING USED ACROSS THE NATION TO KEEP BUSINESS RECORDS, WRITE NEWSLETTERS, COMPOSE TECHNICAL INSTRUCTION BOOKS, ETC.

FEATURES SUCH AS:

"LIVE" EDITING OF TEXT - OVER THE ENTIRE LINE. NO RETYPING!!! FASTER CURSOR - TO ENHANCE YOUR SPEED OF EDITING OR ADDING TEXT. SELECTABLE LINE LENGTHS FROM 32 TO 132 CHARACTERS PER LINE. TRUE UPPER AND LOWER CASE ALPHABET - EVEN ON THE 99/4 COMPUTER. USER-ADJUSTABLE, DISPLAYED TABS: COLOR-CODED ON-SCREEN MARKERS. AUTOMATIC CENTERING OF TEXT IN ANY LINE LENGTH OR LETTER SIZE MODE. VARIABLE LEFT-HAND MARGIN FOR RS232 PRINTERS SHIFTS PAGE TO THE RIGHT. "INTELLIGENT" RIGHT-HAND JUSTIFICATION OF TEXT AVOIDS BIG "GAPS". EASY TO USE STRING SEARCH/REPLACE OPTION TO CORRECT SPELLING, ETC. AUTOMATIC PAGE NUMBERING OPTION AND MUCH MORE.

RS232 AND THERMAL PRINTER COMPATIBLE.
REQUIRES EXTENDED BASIC, MEMORY EXPANSION AND DISK DRIVE.

\$48.00

ALSO AVAILABLE:

QUIMBEE—\$20.00

DISK OR CASSETTE - EXTENDED BASIC REQUIRED

LEARNING MORSE CODE SET—\$22.00

DISK OR CASSETTE - CONSOLE BASIC ONLY

OTHERS AVAILABLE - SEND FOR FREE CATALOG

PAYABLE TO:

DYNAMIC DATA AND DEVICES

P.O. BOX 912

STAFFORD, TEXAS 77477

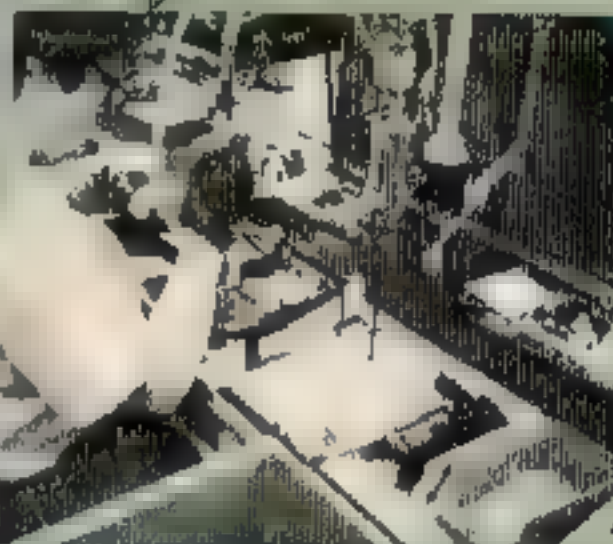

(713) 343-0033

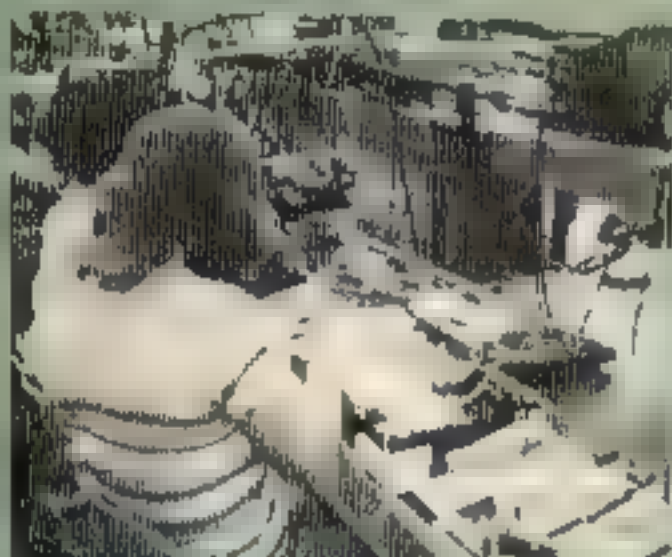

20. . . . Now, together at last, they are put to the test . . .

21. Boards are shielded in metal to prevent possible TV interference

22. The power supply board goes in the case

23. . . then the main board with the computer itself

24. Now the keyboard . . .

25. . . and finally the bottom of the case

26. The completed home computer gets a "drop test"

27. Then trial by fire — racks upon racks of Home Computer consoles stay powered up for three days straight (this is appropriately called a "burn-in" test)

28. And again each console is fully tested!

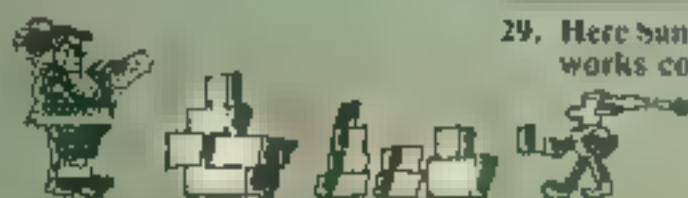

29. Here Santa's helpers make sure each key works correctly

30. All those that meet Texas Instruments standards get "spiffy" brushed aluminum trim

31. Each new TI Home Computer is carefully packed for that long Christmas Eve journey

FUTURA

SOFTWARE

We take this opportunity to express our sincere appreciation for your response to our previous advertisements and ask that you contact us at any time we may be of assistance.

Sometimes in the rush of daily business, we fail to say THANKS loud enough to hear. Be assured that your patronage is never taken for granted. We consider it a privilege to serve you.

We at FUTURA are dedicated to providing the best possible product for the TI99/4 user. Let us know how we can best serve you. Again, our sincere thanks and

BEST WISHES
for 1983!

Ehninger Associates, Inc.

P.O. Box 5581

Plotting...from p.20

for some reason, such as loading some other program into the Mini-Memory. Therefore, once it has been loaded, *do not* invoke the CALL INIT routine! Make sure that no other data is loaded into the Mini-Memory or the lower part of the memory in the Memory Expansion (HEX 2800 to HEX 3000). If the program needs to be loaded into the Mini-Memory, this can be done in one of two ways:

Method 1:

To assemble and load from the program listings—

1. Plug the Editor/Assembler cartridge into the TI-99/4A.
2. Using the Editor, enter the program segment in Listing 1 called BIT1. Save the text entered on a disk file called BIT1.
3. Create disk file BIT2 using Listing 2 as in step 2.
4. Create disk file BIT3 using Listing 3 as in step 2.
5. Create disk file BIT4 using Listing 4 as in step 2.
6. Create disk file SOURCE using Listing 5 as in step 2.
7. Execute the assembler on disk file SOURCE. Direct the object code to disk file GRAPHICS. Use Assembler option R (plus L and S options, if you have a printer).
8. Remove the Editor/Assembler cartridge and insert the Mini-Memory cartridge.
9. Put the disk containing the file GRAPHICS into disk 1.
10. Select the Mini-Memory from the main menu.
11. Select the RE-INITIALIZE option and then press PROCEED.
12. Select the LOAD AND RUN option.
13. Under file name type DSK1.GRAPHICS.
14. When the routine asks for another file name press QUIT.

The routine is now loaded into the Mini-Memory.

[For detailed information on the Editor/Assembler, consult the TI Editor/Assembler manual—Ed.]

Method 2:

To load from the 99'er Magazine-on-Tape cassette, follow the instructions below—

1. Plug Mini-Memory into the TI-99/4A.
2. Select the EASY BUG option from the main menu.
3. Press any key.
4. Press L when a question mark appears.
5. Put the cassette containing the package into the player.
6. Follow the instructions on the screen.
7. When a question mark reappears press QUIT.

The routines need the Memory Expansion for a 6K buffer in addition to the space in the Mini-Memory. If the Memory Expansion is not properly attached a blank screen will appear when the GRAPH routine is invoked.

Example BASIC Programs

The following example will scale the screen so the Xmin is -1, the Xmax is 1, the Ymin is -0.75, and the Ymax is 0.75. The axes will cover the length and height of the screen and intersect at the center. A box will be drawn around the center and the statement "This is a test!" will appear at the bottom of the screen.

```

100 REM **PLOTING TEST ROUTINE
110 REM
120 REM 99'er Mag.
130 CALL LINK("GCLEAR")
140 A = .75
150 B = 1
160 CALL LINK("SCALE",-1,B,-.75,A)
170 CALL LINK("XAXIS",-1,B,0)
180 CALL LINK("YAXIS",- .75,A,0)
190 CALL LINK("MOVE",.5,.375)
200 CALL LINK("DRAW",.5,-.375)
210 C = -.5
220 CALL LINK("DRAW",C,-.375)
230 CALL LINK("DRAW",C,.375)
240 CALL LINK("DRAW",.5,.375)
250 AS="This is a test!"
280 CALL LINK("MOVE",-1,-.75)
290 CALL LINK("LABEL",AS)
300 CALL LINK("GRAPH")
    
```

The TI BASIC program following creates a box drawn in perspective on the TI-99/4A screen.

```

100 REM ** 3-D BOX **
110 REM
120 REM 99'er Magazine
130 CALL LINK("GCLEAR")
140 CALL LINK("SCALE",0,10,0,20)
150 CALL LINK("MOVE",2,8)
160 CALL LINK("DRAW",2,13)
170 CALL LINK("DRAW",7,13)
180 CALL LINK("DRAW",7,8)
190 CALL LINK("DRAW",2,8)
200 CALL LINK("MOVE",7,13)
210 CALL LINK("DRAW",8,15)
220 CALL LINK("DRAW",3,15)
230 CALL LINK("DRAW",2,13)
240 CALL LINK("MOVE",8,15)
250 CALL LINK("DRAW",8,10)
260 CALL LINK("DRAW",7,8)
270 CALL LINK("MOVE",2,4,10,75)
280 CALL LINK("LABEL","99'er Magazine")
290 CALL LINK("GRAPH")

```

OK, that's your new tool! I wonder what you will be plotting next. . .

ACKNOWLEDGMENT

This package was developed with the computer facilities at the University of Dallas as a project under the guidance of Dr. Bernard Asner and Dr. Carlisle Phillips.

NOT POLYOPTICS

Twelve great games for the TI 99/4(A). Specifically designed to take full advantage of the graphics and sound capabilities of TI BASIC.

- (1) **Advanca**. Combines the best features of popular board games and then adds the action and unpredictability of the arcade. **\$13.00**
 - (2) **Ant Wars**. A war simulation based on the insect world. An optional spider adds a third party to reckon with. **\$18.00**
 - (3) **Cars & Carcasses II**. Your city has been invaded by draculæ, frankensteins, and space monsters, and you must run them down. **\$10.00**
 - (4) **Crosses**. Markers are alternately placed on a grid, and the center piece of a cross captures it. Chain reactions sweep the board. **\$10.00**
 - (5) **Hordes**. The ultimate game of world domination. On a screen map of the world armies and navies vie for control. **\$18.00**
 - (6) **Khe Sanh**. Command a military base in Viet Nam during the Tet Offensive. Search and destroy, defoliate jungles, defend convoys. **\$18.00**
 - (7) **Maze of Ariel**. A maze game with a difference. Use lantern and grenades to negotiate a continuously changing, dragon-infested maze. **\$13.00**
 - (8) **Sengoku Jidai**. War game based on the period of the Shogun. From your castle stronghold reach out to conquer a world. **\$18.00**
 - (9) **Ships!** Take three men-of-war and sail them into battle. With weather changes complicating the action, you must broadside the enemy. **\$15.00**
 - (10) **Starship Pegasus**. Contact extra-terrestrial intelligence as you explore and conquer the stars. Complete with name and descriptions of the alien life forms. But watch out for Hyper-D Marauders! **\$18.00**
 - (11) **Tickworld**. Eight hungry giant ticks are after you. You must capture them and put them in cages. **\$13.00**
 - (12) **Winging It**. Flight simulator for the TI 99/4(A). Once you've mastered flying, three different games test your skill. **\$15.00**
- OK. These games are all keyboard actuated, and you need no peripherals other than a cassette recorder. Mention this ad and receive an additional 10% off the above prices.

ELIZA IS HERE!

...Artificial Intelligence.

A full implementation of the original "Eliza" colated at MIT in 1966. The program has been converted to TI Extended Basic and incorporates special logic changes to speed execution time. Eliza is a non-directive psychotherapist who analyzes each statement as you type it in and then responds with her own comment or question and her remarks are often startling appropriate. Requires memory expansion and a disk drive. The program is being offered at the introductory price of \$25.00 for a protected disk file and if you want to know how she does it (or teach her to do more) we will include the complete source program for only \$20.00 additional.

A.I. DATA SYSTEMS

2911 South Santa Fe
Vista, CA 92083

THE PERFECT TEXAS INSTRUMENTS TRADEOFF.

Trade in your current Texas Instruments TI-99/4 Peripheral Accessories to the BACH Company and we'll give you credit towards the New TI Expansion Box and its peripherals.

Or, buy preowned, reconditioned TI-99/4 Peripheral Accessories at a Big savings from the BACH Company. Then, when you're ready,

trade them in for credit towards the Expansion Box System of peripherals.

In either case, be sure to CALL TOLL FREE 800-227-8292. And in California call 415-969-6601 or 415-494-1995 for prices and more

information about this exciting NEW TradeOff to improve your Texas Instruments Computer System.

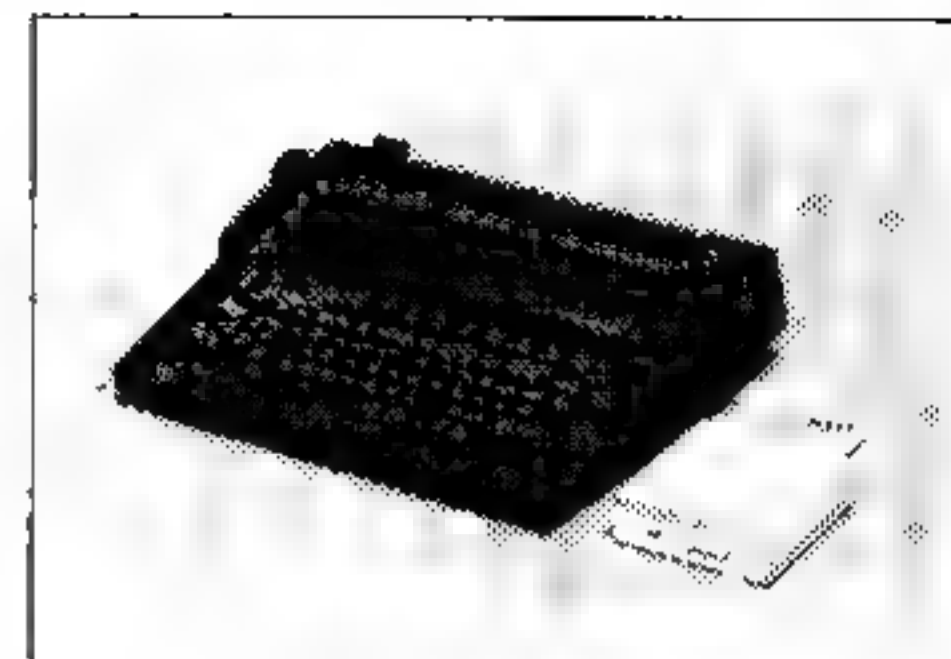

THE BACH COMPANY

715 ENSIGN WAY, PALO ALTO, CALIFORNIA 94303

daisy quality

printing ... \$249

Now you can turn your Olivetti Praxis-30 or -35 daisy wheel typewriter into a letter quality printer. The OLIVE-1 provides your Praxis with a microprocessor-based, serial communications interface (RS-232C) compatible with most computers. It features a wide range of options and supports all typewriter

functions, including the entire printable character set (KBI & KBII). Complete with interconnect/installation instructions and user guide. Wall socket plug-in power supply (9VDC/500mA) optional. Also available: OLIVE-80, a fully integrated Praxis-30 plus OLIVE-1 typewriter/printer package for under \$750.00.

FEATURES

- Membrane Handshake
- Software Protocols (ETX/ACK or XON/XOFF)
- Selectable Band Rates (110, 300, 1200)
- 166 Character Buffer (full line at 15 cpi)
- Printing Pitch Selection (10, 12 & 15 cpi)
- Keyboard I & II Selection
- Control over Praxis buzzer
- RS-232C Configuration Options (TXD/RXD crossing, Carrier Detect Assert, Handshake via CTS or DTR)
- Paper-Out Indicator LED
- Reset & Resume-Print Switches
- Printing Speed: Approx. 12 cpi

PARSEC... from p.47

gaming contest. Deeply involved in the fast-paced action—with over 280,000 points and still slightly shaken from the last surprise attack by KILLER SATELLITES—the realization that I was rapidly becoming the center of attention didn't strike home until a piercing voice from the crowd cried out, "Go find the Judge!" That did it. . . I snapped out of my fantasy world of interstellar combat, quickly turned off the computer (thus erasing my score), and lickety-split lost myself on the crowded show floor. Let the kids win the prizes; I was supposed to be there anonymously—and be *working*!

How does all this relate to the "ultimate" video game? Let's just say that *Parsec* isn't quite there yet. Sure, it contains the requisite technical

elements—a mixture of special effects and machine features that define the state of the art in personal computer gaming—but there's definitely room for improvement. Some enhancements I'd like to see in future generations of space games include 3-D perspectives; shadows of moving objects; ground-to-air interaction; auxiliary windows in the playing screen for long-range scanning and monitoring other ship functions, and the deployment of additional weapon/defense systems.

Additionally, I'd like to see the concept of distress signals and rescue attempts implemented. This might lend itself to multi-player cooperation and interaction—e.g., the entire family can work together to defeat the enemy.

I haven't even addressed the concept of speech *recognition* in a video game

of this type because the low-cost implementation of this technology is still at least a year away. But just imagine—if instead of having to hit particular keys on the keyboard to vary your lift, you could verbally command your computer, "Lift 1 . . . Reverse Engines. . . Lift 3. . ."

But enough of this. I've probably already told you more than you need to know. After all, we game designers must keep some secrets to ourselves. . . So go ahead and buy *Parsec*; you'll have a ball and might even discover some hand-eye coordination you never thought you had. As for me, it's back to the video gaming grid. Hackers like me gotta keep on working hard to stay ahead of those TI programmers. . .

SKY-DIVER

Climb aboard the jump plane with up to three buddies. You direct the plane to the desired altitude and position over the jump zone. There it is! Now drop a streamer to check for changes in wind due to altitude and Coriolis effect. This looks like the spot. Here we go... GERONIMO

You're drifting too far to the left, but don't worry, you can manoeuvre while free-falling at speeds up to 125 mph. Don't delay pulling the rip-cord for too long though — there's a 10% chance you will have to use your reserve chute!

Ah, it worked! Now, pull the right toggle to turn to the right. Oops! You're overshooting — pull both toggles to cut the glide — not for too long or you'll have a hard landing and be out of the competition. Things sure happen fast as you get close to the ground!

Perfect! A Bull's Eye touch-down for 100 points. That cinches the championship. Congratulations!

\$19.95 U.S. or \$24.95 Canadian. In EXTENDED BASIC, on cassette tape.

HANG-GLIDER PILOT

Feel that sea breeze — it's a perfect day for ridge soaring. Just take a deep breath and jump; you're ready for it... YAHOO!!!

Follow the ridge to gain some altitude. Hey! Don't climb so steeply — you might stall and not recover in time. Phew, that was close.

OK, head out cross-country now. Try to work the thermals over rocky fields, but avoid lakes and forests — they usually have heavy downdrafts over them. Look at that eagle circling, he sure knows where the thermals are.

It's getting late, time to be heading back. The thermals are gone and there's no more ridge-lift, so you had better pick your spot to land. Push the bar forward slowly and stall it on. Slow down or you'll break your neck! Watch out for the tree!... That's it.

Nice landing — for a beginner. Who's next?

\$19.95 U.S. or \$24.95 Canadian. In EXTENDED BASIC, on cassette tape.

DEVIL CRAZE

A simple but devilishly-fun game that will drive you crazy over your "left" and "right". **Caution:** Game frequently induces muscle spasms and laughing fits. Fun for all ages!

\$17.95 U.S. or \$21.50 Canadian. In EXTENDED BASIC, on cassette tape.

Cheque, money order or Mastercard. Shipping and handling is free. Ontario residents add 7% sales tax.

\$10/sub; \$16/non-sub

PACKAGE #E1 TI BASIC

Typing for Accuracy (Vol. 1, No. 3)
Let's Learn Notes (Vol. 1, No. 3)
Mystery Words (Vol. 1, No. 4)
Homework Helper: Fractions (Vol. 1, No. 1)
Homework Helper: Division (Vol. 1, No. 4)
\$12/sub; \$20/non-sub

- All purchasers of these packages are responsible for obtaining the individual documentation and program instructions in the indicated back issues of the magazines. When an issue goes out-of-print, copies of the program articles will be made available for purchase.
- If programs have been updated/enhanced since original publication, a printed copy of documentation changes will be provided with the tapes.
- Both subscriber & non-subscriber prices are indicated. To be eligible for the lower subscriber prices, you must be a current, paid magazine subscriber. All orders will be verified prior to shipment.
- Authors of these and future programs distributed on tape and disk will receive **Bonus Payments** based on the number of tapes sold; so in fairness to them, please observe the Copyright laws, and report any incidents of "piracy" to our office.
- Recognized TI User Groups should contact us for special bulk terms & rates — No dealers, please.

Back Issues of 99'er are Still Available . . . but quantities are limited so **ORDER TODAY!**

ISSUE #1
ISSUE #2
ISSUE #3
ISSUE #4

OUT OF PRINT

Each Only
\$3.95 postpaid

ELEK-TEK, inc.

TI LOGO: It opened a door they thought was locked.

It opened a door to their minds.

The key: a Texas Instruments Learning Computer and TI LOGO, a programming language developed by TI and MIT.

In his inner-city, New York junior high classroom, teacher Steve Siegelbaum explains why it works so well.

"When they use it, they think they're teaching the machine. In reality, it's teaching them how to

learn. It definitely improves their attitude toward their other courses. Written and verbal expression improve—they're eager to show you, to tell you, what they've done."

Another teacher, Pete Rentof, adds, "What it fights is fear of failure—a mistake becomes a starting point. The whole learning process turns into a positive experience. It works."

The TI Learning Computer,

with TI LOGO and many other educational programs, is equipped to help open doors in any classroom. Including yours. For information on this remarkable system, contact: Texas Instruments Customer Relations, P.O. Box 53 Lubbock, Texas 79408.
